1968

PREFACE

The 1968 edition of the Canada Year Book continues a series of annual publications giving authoritative statistical and other information on almost every measurable phase of Canada's development. Marking the fiftieth anniversary of the establishment of the Dominion Bureau of Statistics, the history and current functions of the Bureau in collecting, tabulating, analysing and publishing the growing mass of detailed data required by governments, industry and society in general in the day-to-day conduct of the private and public business of the country are outlined in the introductory section of this volume (pp. v to xi). The Canada Year Book has, through the years, summarized the statistical data made available by the Bureau and presented it along with legislative and other pertinent information to give concisely, within the covers of one volume, the story of Canada's economic progress.

Each chapter of the Year Book contains the latest information procurable at the time of printing, the emphasis changing with developments and interest in the field covered and new material added where available. Change has become the order of the day, and the current edition covers such major legislative revisions as those that have taken place in Canada's immigration policy, in the administration of broadcasting, in the Criminal Code and in the Bank Act. Included also are special feature articles or specially prepared chapter material on "Archaeology in Canada" (pp. 20-29), "Animal Life in Canada Today" (pp. 47-60), the historical and current administration of the Yukon Territory and the Northwest Territories (pp. 110-116), "Technology, Markets and Costs in Manufacturing" (pp. 689-694), and "Canada's International Trade After the Kennedy Round of Trade Negotiations" (pp. 946-954). The list of "Books About Canada" in Chapter XXVII has been revised to include the unusually large number of important writings that were published during Canada's Centennial Year. A 140-mile-to-the-inch political map of Canada is inserted in a back-cover pocket.

The volume was produced in the Canada Year Book Division by Miss Margaret Pink, Assistant Director, and the Year Book staff under the editorship and direction of Dr. C. C. Lingard, Director of the Division. The charts and maps, except where otherwise indicated, were prepared by or under the direction of L. Tessier of the Drafting Unit. Credits for other photographic illustrations used throughout the publication are listed on p. xiv.

The co-operation of numerous officials of the various Departments of the Federal and Provincial Governments and of this Bureau in the preparation of material for the Year Book is gratefully acknowledged. Credit by means of footnotes is given where possible, either to the persons or to the public service concerned.

Harold G. Duffett.

DOMINION STATISTICIAN

DOMINION BUREAU OF STATISTICS,
OTTAWA, APRIL 1968

The Dominion Bureau of Statistics Building now houses only part of the Bureau's staff, the number of employees having grown from 1,500 in the early 1950s, when the building was constructed, to more than 2,800 in 1968.

Walter E. Duffett, the present Dominion Statistician, with his immediate predecessor, Herbert Marshall, who held the post from 1945 until 1957.

The Dominion Bureau of Statistics 1918-1968

Because the Canada Year Book is basically a statistical publication, it is appropriate that the 1968 issue should mark the fiftieth anniversary of the Dominion Bureau of Statistics and provide some indication of the significance of statistical development in Canada in the past fifty years. Although the history of Canadian statistics goes back much farther, the year 1918 and the passing of the Statistics Act mark a basic turning point. The Act established the foundation for the co-ordinated and integrated statistical system which exists at present.

The statistical antecedents of the Bureau of Statistics extended back to Intendant Jean Talon's 1666-67 enumeration of persons, areas under cultivation, and livestock in the St. Lawrence colony of New France — an enumeration renowned as the first systematic census of modern times and model for thirty-six subsequent censuses during the French régime. Later, partly because the English-speaking colonies that originated in the Loyalist migrations were isolated from one another, census-taking was generally intermittent and lacking in comparability until well into the 19th century. However, by the 1840s the concept of a regular decennial census gained support and the Provinces of United Canada, Nova Scotia, New Brunswick and Prince Edward Island each took censuses in 1851, thereby initiating, even in pre-Confederation times, the first of the long series of decennial enumerations conducted on a broad geographical basis.

Most of the Bureau's statistical data is now processed on three large computer systems.

Since the United Province of Canada was the predominant partner in the Canadian Confederation of 1867 and since in its division of legislative powers the British North America Act allocated "the Census and Statistics" to the jurisdiction of the Federal Government, it was natural that the first attempts at the organization of statistical machinery on a national basis should evolve around the Province of Canada's Board of Registration and Statistics, set up in 1847.

Despite the achievement of Confederation in the political sphere, the development of a co-ordinated comprehensive system of general statistics adequate to the needs of the new transcontinental federation was delayed for half a century. Although Canada's Census Commissioner, Dr. J. C. Taché, brought together in Volume IV of the Census of 1871 an invaluable summary of all the preceding censuses over a period of more than two centuries, and Parliament passed a new Census and Statistics Act in 1879 providing for the taking of a census in 1881 and every tenth year thereafter and for the making of regulations concerning the collecting and publishing of vital, agricultural, commercial, criminal and other statistics, the establishment under the Ministry of Agriculture of a permanent Census and Statistics Office in 1905 constituted the first step toward the combination of census and other statistical data into a co-ordinated statistical system for the whole country. The statistical work then being performed in government departments was characterized by frequent overlapping, by some duplication on the part of both federal and provincial departments and by great gaps and lack of uniformity in coverage. Indeed, the existence of these inadequacies was confirmed through an inquiry conducted in 1912 by the Departmental Commission on the Official Statistics of Canada, comprised of representatives from the Civil Service Commission, the Census and Statistics Office, and the Departments of Trade and Commerce, of Labour, and of Customs. The Commission, in its report, recommended the organization of a Central Statistical Office for the co-ordination, unification, extension and general improvement of statistics, and the taking of a quinquennial census. It recommended a thorough examination of methods currently in use in collecting and compiling data, the institution of an annual census of production (embracing the chief products of agriculture, forestry, fisheries, mining and manufactures), the co-ordination of the work of the statistical branches of the Departments of Customs and Trade and Commerce, the reorganization of canal statistics and the creation of statistics of coastal trade, the creation of wage and consumption statistics, improvement in the statistics of insurance, the development of price statistics, the enlargement of the Canada Year Book, and, in the provincial sphere, the co-ordination of statistics of births, marriages and deaths, public health, education, agriculture, local and municipal governments, industrial accidents, various phases of production, finance, public lands, public works, hospitals and charities.

The first step in the implementation of the report of the Commission was the appointment in 1915 of R. H. Coats to the office of Dominion Statistician and his assumption of responsibility for devising a practical scheme for the organization of a central Canadian statistical office. Three years later, after minute examination of the statistical field by the Dominion Statistician and after discussions and conferences with federal and provincial departmental officials, the Statistics Act, 1918 was passed by

Parliament, creating the Dominion Bureau of Statistics. As since amended, the Statistics Act now reads, in part:—

There shall be a Bureau under the Minister, to be called the Dominion Bureau of Statistics, the duties of which are

*to collect, compile, analyse, abstract and publish statistical information relative to the commercial, industrial, financial, social, economic and general activities and condition of the people ;
to collaborate with all other departments of the government in the collection, compilation and publication of statistical records of administration according to any regulations ;
to take the census of Canada ; and
generally to organize a scheme of co-ordinated social and economic statistics pertaining to the whole of Canada and to each of the provinces thereof.*

*The Governor in Council may appoint an officer called the Dominion Statistician to hold office during pleasure, whose duties are, under the direction of the Minister,
to advise on all matters pertaining to statistical policy and to confer with the several departments of government to that end ;
to organize and maintain a scheme of co-operation in the collection, classification and publication of statistics as between the several departments of government ;
to supervise generally the administration of this Act and to control the operations and staff of the Bureau ; and
to report annually to the Minister with regard to the work of the Bureau during the preceding year.*

The first three years of DBS were highly significant, with the reorganization, co-ordination and unification of a nation-wide system of social and economic statistics and served to emphasize the fundamental purpose, the wide scope, and the significant character of the Bureau's work and, incidentally, provided the backdrop to the following sketch, in briefest form, of developments that highlighted its program and achievements during the next two or three decades.

- *Upon the transfer of the Census and Statistics Office from the Department of Agriculture to the Bureau, the Census — both decennial and quinquennial — was reorganized.*
- *A national scheme of vital statistics was established by encouraging the provinces to enact uniform legislation, adopt uniform administrative procedures, use standard forms issued by the Bureau, and supply the latter with transcripts of original returns.*
- *The monthly and annual statistics of agriculture were brought under joint operation of the Bureau and the nine provincial governments, improving the data and eliminating much duplication of work. Among the features were the annual census of acreages under field crops and livestock on farms carried out with the co-operation of the rural schools, the pooling of monthly data on crop conditions, etc.*
- *The statistics of fisheries, mines, forestry, dairying, central water and electric power, and general manufactures were unified and, after consultation with some 35 Canadian trade and industrial associations, placed on an annual "Industrial Census" basis in co-operation with the federal and provincial departments concerned, thereby bringing*

into harmony the statistical activities of over 30 departments and, in conjunction with agricultural statistics, providing more comprehensive and up-to-date information on all phases of production. This was, and remains, one of the few annual censuses of industry undertaken in any country.

- The statistics of external trade (exports and imports) and of transportation and communications were completely remodelled and the analytical data increased.
- A new branch dealing with internal trade, including interprovincial trade movements, the marketing of staple commodities and a complete system of prices statistics, was established.
- Criminal statistics were reorganized and co-ordinated with the census and with other social statistics.
- Two new branches were established and substantial beginnings made in the treatment of public finance and education — the latter in collaboration with the nine provincial governments, including the holding of Canada's first Dominion-Provincial Conference on Education in October 1920.
- Relations between the Bureau and the Department of Labour, covering the then entire range of labour statistics, were reduced to formal working arrangements and overlapping eliminated.
- A reference library covering the statistics of major countries was established and a central tabulating service, available for all departments, was put into operation.
- The General Statistics Branch, whose Chief, Dr. S. A. Cudmore, was destined to succeed Dr. Coats as Dominion Statistician, reported steady improvement of its major work, the "Canada Year Book" as "the official compendium of Government data on the resources and development of Canada", and the launching of a *Monthly Review of Canadian Statistics* to reveal current economic trends through so-called "barometric" statistics.

Thus, during the succeeding 1920s and 1930s this broad framework of a unified and co-ordinated system of national statistics was well established and Bureau attention was being focused on qualitative improvements in statistical reporting systems, and on more sophisticated indexes. Perhaps the most outstanding achievement of the Bureau in the 1930s was the development and publication (1939) of statistics of "the Canadian balance of international payments" which coincided with the expansion and increased complexity of the Canadian economy and related problems of foreign investment, external trade and foreign exchange — all creating new demands for a synthesis of statistical data covering various fields of activity.

The Bureau's contribution to the nation's total war effort took numerous forms. Sometimes it involved the expansion of its own statistical compilations to meet the enormous demands of Government — for example, those relating to the cost-of-living index, to employment and payrolls, to the census of industry and to agriculture's food commodities. Sometimes it involved assisting in setting up separate statistical sections in war departments and agencies or lending trained personnel to collect and compile vital information — for example, a national registration required for the mobilization of manpower was taken with the help of the Bureau's census resources.

The increased postwar complexity of social and economic problems, the trend toward social security, the acceptance by governments of added responsibilities and administrative functions, the immense strides in industrialization, etc., greatly expanded the needs of government and industry for reliable statistical series as a vital aid in policy-making and administration. In taking up the challenge, the Bureau approximately doubled its staff between 1939 and 1950. It recruited a Research and Development Staff of economists and statisticians to set up a new series to meet the developing needs of expanding government functions, and to reorganize the national income statistics and produce the "national accounts" along modern lines. A development of lasting significance was the utilization of scientifically designed probability samples instead of the complete but financially prohibitive enumerations (normally restricted to the decennial and quinquennial censuses) to provide detailed estimates of the size and composition of the labour force. This technique was extended to other areas such as the surveying of incomes and expenditures and to consumer spending surveys required for the revisions of the consumer price index.

Other postwar developments included the revision of Canadian standard industrial and commodity classifications which led to improvements in the uniformity and consistency of economic statistics; the expansion of statistical data in the fields of national health and welfare, including a national survey of the volume of sickness and of medical and nursing care and of family expenditure relating thereto, the revision and standardization of hospital statistics and of statistics relating to criminal offences, juvenile delinquency, police activities and correction institutions; and the adoption of improvements in census-taking, including the use of the electronic computer to speed up compilation and publication of census data.

Although the taking of nationwide decennial and quinquennial censuses of population and agriculture, of annual censuses of industry and, recently, of a quinquennial census of merchandising and services, and the compilation and publication of the results thereof are among the most widely known of the Bureau's services, a more sophisticated measure of its contributions to Canada is to be found in its development of such statistical aggregates as the gross national product, gross national expenditure and personal income and their publication annually.

The national accounts permit the quantitative analysis of economics within the framework of modern economics of which Keynes was the founder and of which the sophisticated econometric models of the past few years are the latest result. In addition, they furnish an economic and operational framework for the analysis and compilation of statistics.

The income and expenditure accounts were only the first set of interrelated accounts in a broad system of economic statistics which has by now been extended to include input-output tables and details of production by industry in constant prices. These permit the analysis of the industrial structure and its components in a fine degree of detail and furnish the basis for the integration of statistics relying on the establishment as the collection unit. Statistics on financial flows, in process of completion, permit a thorough exploration and examination of the financial transactions in the economy and

DBS

integrate those statistical data which are obtained from the company or legal entity as the unit of collection. Within this framework, the future will probably see the development of wealth estimates as well as measures of over-all factor productivity. Although at present the Bureau's productivity estimates refer only to the labour component of production, these estimates constitute another facet of broad economic statistics.

Significant among the factors highlighting the accelerated demands for statistical services during the 1960s have been the pressing needs of such new Federal Government agencies as the Agriculture and Rural Development Act (ARDA) administration, the Economic Council of Canada, the Department of Industry, the Department of Manpower and Immigration and various Royal Commissions of inquiry, as well as the requirements for more provincial and regional data, and the practical integration into the national statistical system of the operations of the Corporations and Labour Unions Returns Act Administration (CALURA). These developments have been accompanied by a widespread recognition in government and in business of the vital role of statistical information in the process of decision making. To meet the challenge of such demands, the Bureau has augmented the professional staff in all its statistical divisions and added a Regional Statistics and Analysis Staff. To accommodate its data-processing demands, the Bureau's three computer systems have been operating on a 24-hour-day, five-day-week basis and are about to be replaced by more modern equipment. The observations and recommendations of the Royal Commission on Government Organization (Glassco Commission, December 1962) provided a number of distinctive guidelines respecting statistical services, some of which have been or are in the process of being implemented. For example, the Bureau's status was clearly defined by Order in Council of Jan. 6, 1965, which specifically designated the Dominion Bureau of Statistics as a separate department of government and the Dominion Statistician as having the rank of a Deputy Minister.

The Bureau's inauguration of a Monthly Survey of Occupational Job Vacancies in 1967 is an example of current endeavours to provide statistical information in areas of management and policy formation, such as manpower. Recent expansion of the Bureau's information services indicates the importance currently being placed on improvement of relations with respondents to DBS surveys as being essential to obtaining the co-operation necessary in supplying accurate information promptly. Development of the uses of statistics, especially among marginal and non-users in the business community, is pursued as an associated activity.

The reorganization in January 1967 of DBS through the grouping of its 19 subject-matter Divisions into four Branches, each headed by a Director General, is designed to enable the Bureau to manage its affairs more efficiently and to cope with the increasing complexity and rapid expansion of its services to the government and to the public. The four Branches, entitled Economic Accounts, Financial Statistics, Economic Statistics, and Socio-Economic Statistics, augmented by a new data-processing Operations and Systems Development Branch, will facilitate more effective communication between the Dominion Statistician, executive management and the subject-matter and service Divisions. The new organization is designed as well to strengthen the integration and co-ordination of subject-matter fields, to develop and implement up-to-date

statistical methods and to carry out basic analysis and research. The Bureau should accordingly be able to serve more effectively the needs of governments and the community at large.

The speed and direction of further development of the statistical system will reflect, in all probability, a continued growth in the tendency of business and government at all levels to require objective and reliable statistical information in order to make important decisions regarding national and regional policies and in the allocation of large amounts of resources. While the basic statistical structure now exists in many fields, new areas are yet to be developed and the Bureau is devoting important resources to improving its efficiency and productivity to meet existing and new needs as economically and effectively as possible.

SYMBOLS

The interpretation of the symbols used in the tables throughout this publication is as follows:—

.. figures not available.

... figures not appropriate or not applicable.

— nil or zero.

-- amount too small to be expressed or where "a trace" is meant.

^p preliminary figures.

^r revised figures.

WEIGHTS AND MEASURES AND OTHER INTERPRETATIVE DATA

In Canada as a rule the Imperial system of weights and measures is followed; an exception is the ton where, unless otherwise stated, the short ton of 2,000 lb. is meant.

Relative Weights and Measures, Imperial and United States

The following list of coefficients may be used to translate amounts expressed in one unit to the other. Where reference is made to Imperial pint, quart and gallon, their equivalent in ounces is also in Imperial measure; likewise United States designations for these quantities are shown in the U.S. equivalent in ounces. The Imperial (or British) fluid ounce and the U.S. fluid ounce are different measures. One Imperial fluid ounce equals 0.96 U.S. fluid ounce and one Imperial gallon equals 1.2 U.S. gallons.

1 Imperial pint=20 fluid ounces	1 short ton=2,000 pounds
1 U.S. pint=16 fluid ounces	1 long ton=2,240 pounds
1 Imperial quart=40 fluid ounces	1 barrel crude petroleum=35 Imperial gallons
1 U.S. quart=32 fluid ounces	1 ounce avoirdupois=0.91146 ounce troy (oz.t.)
1 Imperial gallon=160 fluid ounces	1 statute mile=5,280 feet
1 U.S. gallon=128 fluid ounces	1 nautical mile=6,080 feet
1 Imperial proof gallon=1.36 U.S. proof gallon	

The following weights and measures are used in connection with the principal field crops and fruit; 2.3 bu. of wheat are required to produce 100 lb. of flour.

	<i>Pounds per Bushel</i>		<i>Pounds per Bushel</i>
Grains—		Fruits (standard conversions)—	
Wheat.....	60	Apples.....	45
Oats.....	34	Pears, plums, cherries, peaches, grapes and apricots.....	50
Barley and buckwheat.....	48	Strawberries and raspberries (per qt.)	1.25
Rye, flaxseed and corn.....	56		
Rapeseed and mixed grains.....	50		
All others.....	60		

Fiscal Years of Federal and Provincial Governments

The fiscal year of the Federal Government and of each of the ten Provincial Governments ends on March 31. Throughout the Year Book, all figures are for calendar years except where otherwise indicated in text or table headings.

Miscellaneous

Maritime Provinces=Prince Edward Island, Nova Scotia and New Brunswick
 Atlantic Provinces=Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick
 Central Canada=Quebec and Ontario
 Prairie Provinces=Manitoba, Saskatchewan and Alberta
 Btu.=British thermal unit (coal)
 Mcf.=thousand cubic feet (gas)
 n.e.s.=not elsewhere specified
 n.o.p.=not otherwise provided for
 psi. (atomic research)=pounds-force per square inch (pressure)
 D.B.H. (forestry)=diameter at breast height.

Drinking Falls on the Churchill River, to the north of Lac la Ronge in north-central Saskatchewan. This is typical of the rugged beauty of Canadian Shield terrain with its exposed rocks, its myriad of lakes and rivers and its ever-present promise of hidden wealth.

PART I.—GEOLOGY AND GEOGRAPHY

Section 1.—The Geology of Canada*

The bedrock foundation of Canada and its adjacent continental shelves seem rigid and unchanging to human eyes, yet, in terms of geological time, these rocks represent only a momentary stage in the evolution of the Continent, an evolution which began more than 4,000,000,000 years ago. Geological study of most of the present land surface of Canada has shown that at various periods and in various regions dark molten rocks rose from great depths, volcanoes erupted on the ancient land and sea floors, thick sequences of sediments accumulated, granites were either intruded as molten magma or derived from earlier rocks during intense folding and mountain building, erosion wore down or subdued the older mountain chains, shallow seas repeatedly encroached on and receded from the Continent of today, continental glaciers covered most of Canada and, as part of these geological processes, valuable minerals and fossil fuels became concentrated under exceptionally favourable conditions. These interrelated geological processes have produced the buried crust and the present face of Canada. They control the distribution of its economic mineral deposits, its physiography and, in large part, its present and potential land use.

The primary geological subdivisions of Canada are outlined in the following sections. The Canadian Shield forms the ancient nucleus of the Continent. As well as comprising the vast areas exposed in Central and Northern Canada, the Shield extends beneath the veneer of younger marine sediments exposed at the present surface in the Hudson Bay

* An outline extracted from a more detailed article on "Geology and Economic Minerals of Canada", prepared by W. D. McCartney of the Geological Survey of Canada, appearing in the 1967 Year Book, pp. 19-32.

region, some Arctic islands, the St. Lawrence Lowlands and the Interior Plains. West of the Interior Plains, and north and southeast of the Canadian Shield, deep, elongate troughs (geosynclines) developed. These geosynclines received sediments and volcanics which, by folding, were converted into the mountain belts of the Cordilleran, Innuitian and Appalachian regions.

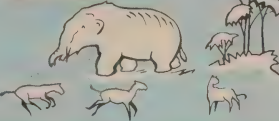

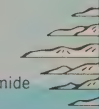

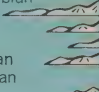

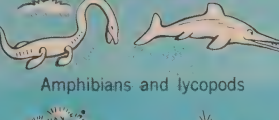

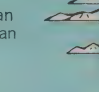

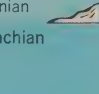

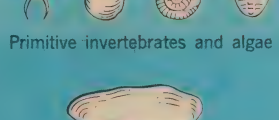

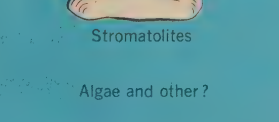

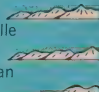

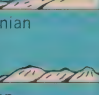

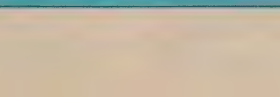

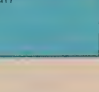

The Canadian Shield.—Precambrian evolution of the present Canadian Shield extended over more than five sixths of known geological time. During this immense interval, many cycles of volcanism, sedimentation, intrusion, metamorphism, mountain building, erosion and ore formation have been completed. The complexities of this history have become better understood as the rate of geological reconnaissance mapping, with the support of helicopters since 1952, has increased and as absolute ages of minerals have been determined by isotopic ratios from about 1,500 well-distributed samples of the Canadian Shield. Many of the absolute ages represent the ages of four main periods of mountain building termed orogenies; these are indicated on the facing geological time chart. The lower map facing p. 3 shows the eight structural provinces currently recognized in the Shield. Each structural province is defined by the equivalent isotopic ages of their terminal orogenies as well as being characterized by variations in rock types, degree of metamorphism, and dominant types of ore deposits. Following one or more major orogenies in a region, that portion involved was stabilized, and relatively undeformed younger Precambrian erosion products were deposited to form basins of cratonic cover rocks, most of which are shown on the map of the Shield. These relatively undeformed late Precambrian basins and remnants of early Palaeozoic sediments show that the Canadian Shield has been remarkably stable since late Precambrian time, subject only to encroachment of younger seas and varying degrees of uplift. In relatively recent geological times, Pleistocene glaciation with scouring of bedrock and deposition of clastic materials has profoundly affected the present drainage and physiography of the region.

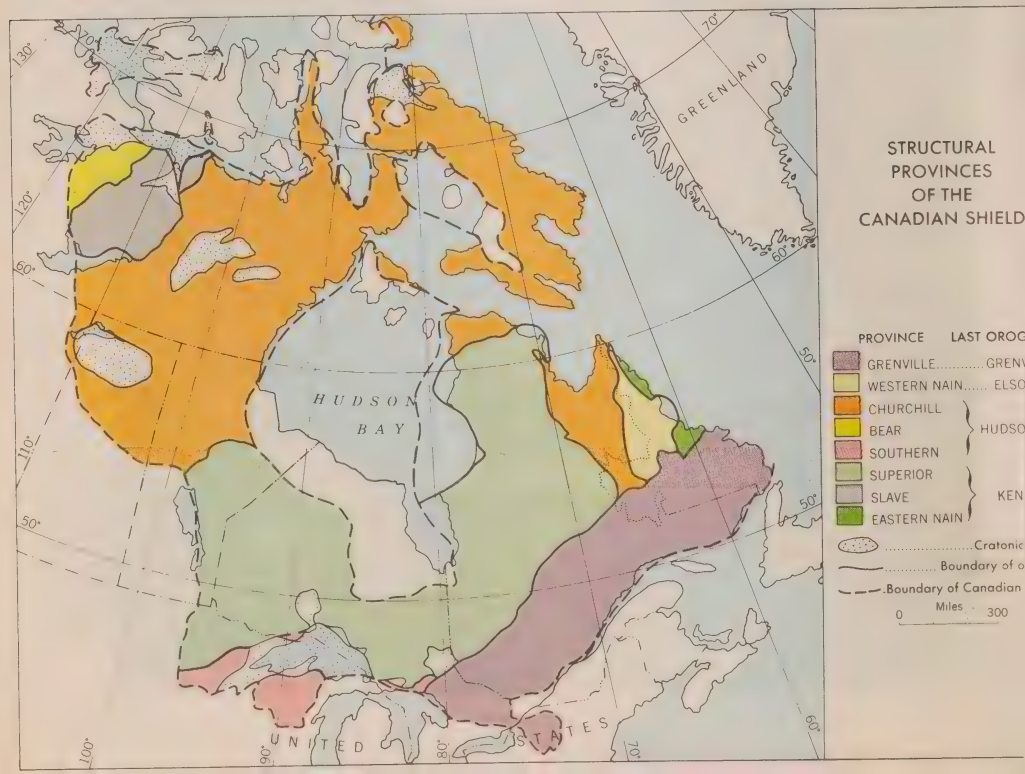

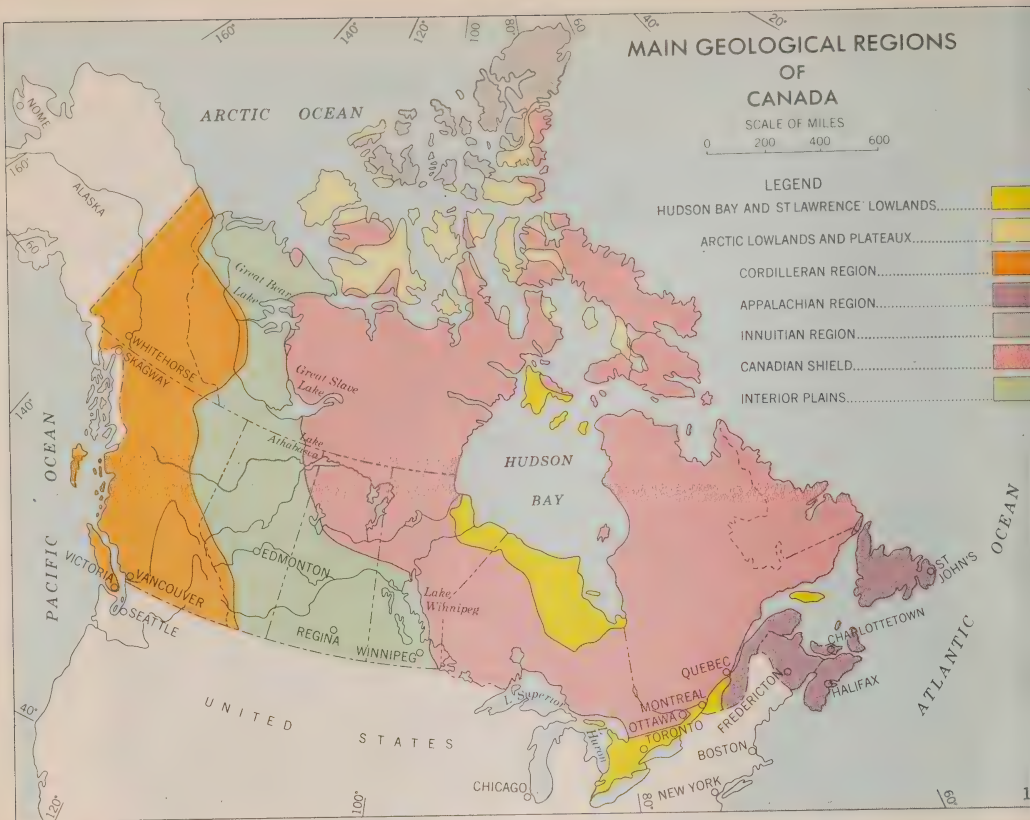

A large part of the Shield, extending from Georgian Bay to the Strait of Belle Isle, has long been recognized as forming a distinct segment called the "Grenville". It was named after the Grenville series, characterized by crystalline limestone, impure limy strata, and large areas of sedimentary gneisses in various stages of alteration to granite. The eastern part of the province contains large igneous intrusions of anorthosite. The age relations between Grenville strata and those of the neighbouring Superior province are puzzling. Near Sudbury, as well as at the south end of the Labrador Trough, beds can be traced across the boundary into more metamorphosed rocks of Grenville type. It is believed, therefore, that the distinctive features of the Grenville may be related more to the time and degree of metamorphism than to distinctions in the original age of deposition of strata.

The areas of undeformed Precambrian cratonic cover rocks shown on the map facing p. 3 represent dominantly clastic detritus washed into basins from the consolidated, nearby, older rocks. At times, marine incursions into these basins led to deposition of limestone and dolomite, and volcanics were deposited in others.

The Appalachian Region.—This region comprises the Maritime Provinces and southeastern Quebec and is the northern continuation of a long belt of folded strata extending along the eastern side of the United States. It is on the site of a long, linear trough or geosyncline that existed mainly in Palaeozoic time in which great thicknesses of sedimentary and volcanic strata were laid down. The northwestern boundary of the region lies adjacent to the Canadian Shield and to the St. Lawrence Lowlands. The strata in the Appalachians have been folded and faulted along axes that strike northeasterly except for local regions such as the Gaspé Peninsula where strikes swing to the east. Thus, strata of different kinds and ages and some belts of intrusive rocks normally form northeasterly-trending bands, many of which are responsible for development and orientation of peninsulas, bays and ridges of the region. Two principal periods of orogeny called the Taconic and the Acadian have been recognized. The Taconic occurred near the close of Ordovician

GEOLOGICAL TIME CHART

time and the Acadian about Middle Devonian time. In Canada the Taconic disturbances were fairly widespread, the Acadian were more so, affecting areas that were previously affected by the Taconic as well as areas that were not, and the Appalachian orogeny, which was a major feature in parts of the United States, was of minor and local importance.

Metamorphosed Precambrian rocks of Grenville type are exposed to form the Long Range of western Newfoundland and small areas in Cape Breton and New Brunswick. On the east flank of the Appalachian geosyncline, as exposed in southeast Newfoundland, younger Precambrian volcanics and sediments are relatively unaltered and were intruded by small granite bodies 580,000,000 years ago. Although Precambrian rocks probably underlie much of the central Appalachians, they are buried beneath the thick Palæozoic sequence.

Cambrian slates, minor limestones and local areas of volcanics lie above and adjacent to Precambrian rocks. Massive sulphide deposits in schists derived from Cambrian volcanics in southern Cape Breton and southeast Quebec were formerly mined. The overlying Ordovician beds were formed at the early stage of development of the Appalachian geosyncline. From west to east, and depending on their position in the geosyncline, the thick Ordovician sections comprise limestone and/or slate in western Newfoundland and adjacent to the St. Lawrence Lowlands in southeast Quebec. Silurian strata are rather similar to Ordovician rocks but are not known to contain large mineral deposits. Unlike the Ordovician submarine volcanics, some or most of the Silurian volcanics were formed on land. This may be one factor in the marked difference in known ore content of the two volcanic assemblages.

In Devonian time, granite batholiths were emplaced in the Maritime Provinces, and smaller stocks of the same age were intruded in Gaspé and southeastern Quebec. At this time, older beds were folded and metamorphosed to varying degrees, particularly near the margins of the granites.

Following the folding and granite intrusion that formed the Appalachian Mountains, adjacent basins were rapidly filled with coarse and progressively finer-grained detritus eroded from the adjacent mountains. Some areas included marine beds, such as the petroliferous Albert shales of eastern New Brunswick which yield oil and gas. After initial infilling of basins, shallow Mississippian seas encroached on the valleys and deposited limestones. Many thousands of feet of clastic sediments were deposited after the Mississippian seas retreated. These beds of Pennsylvanian age contain the commercial coal measures of Nova Scotia. In Triassic time, outpourings of basalt, particularly preserved adjacent to and below the Bay of Fundy, terminated rock-forming processes in the Appalachians. Subsequent erosion has yielded the present, fairly subdued topography of this former mountain chain.

The Cordilleran Region.—The Cordillera of Western Canada consists of three parallel northwest-trending geological and topographical systems. The Eastern System of western Alberta, eastern British Columbia, eastern Yukon, and western Northwest Territories includes the Rocky, Richardson, Franklin and Mackenzie Mountains and foothills, and several intervening plateaux. Comprising the Western System are the Coast Mountains along the west mainland of British Columbia, the St. Elias Mountains in southwest Yukon, the Queen Charlotte Islands and Vancouver Island. The Interior System lies between the Eastern and Western Systems. It contains the plateaux, plains and subdued mountain ranges of the interior of British Columbia and Yukon Territory.

Unmetamorphosed Precambrian to Cretaceous sedimentary strata form most of the Eastern System. These sedimentary strata, which have been uplifted several thousand feet by fault movements, are well exposed in the Rocky Mountains. The Interior System is composed largely of metamorphic, sedimentary and volcanic rocks of Precambrian to Mesozoic ages, which are intruded by numerous, generally unconnected, granitic stocks and batholiths. In places, these rocks are overlain by great thicknesses of Cretaceous and Tertiary volcanic and sedimentary strata. Flat-lying Tertiary basalt flows form many

of the plateaux. In the Western System, the rugged Coast Range consists of almost continuous exposures of steeply eroded granitic rocks of Mesozoic and Tertiary ages flanked on both sides by late Palaeozoic and Mesozoic volcanic rocks and by basins of Cretaceous and Tertiary sedimentary rocks.

During late Precambrian times, beds of quartzite, argillite, dolomite and other sedimentary rocks now comprising the Purcell and Windermere beds were deposited in the eastern Cordilleran geosyncline, a vast shallow sea that extended from south of the present Canada-United States border to the Arctic Ocean. From Cambrian until mid-Devonian time, sedimentary strata consisting of shale, quartzite and limestone continued to be deposited in the area which now forms the Eastern and Interior Systems. In southeastern British Columbia, the world-famous Sullivan zinc-lead orebody lies in Purcell beds and is thought to have formed during late Precambrian time.

Beginning in the mid-Devonian and lasting until early Jurassic, the Western System and most of the Interior System consisted of a deep oceanic trough in which accumulated submarine basalts and fine argillaceous and cherty sediments such as those of the Permian-Carboniferous Cache Creek Series and the Triassic Takla Series. Meanwhile, sedimentary strata were forming in the more shallow waters of the Eastern System, east of the present Rocky Mountain Trench. Thus, in the Rocky Mountains, Palaeozoic limestones, dolomite, quartzite and shale are overlain in many places by similar Mesozoic rocks.

The first large granitic bodies were intruded into rocks of the Interior and Western Systems during early Jurassic time. They were composed mainly of granodiorite and quartz diorite, but ranged in composition from gabbro to granite. These intrusions were accompanied by folding, faulting and metamorphism. Although this orogeny may have been most intense during late Jurassic to early Cretaceous time, intrusion continued until early Tertiary time. Many mines in the Cordillera are related to Mesozoic and Tertiary intrusions. Uplift of the rocks during these processes created mountain chains and, by early Cretaceous time, rhyolites, andesites, basalts and sediments were being deposited in inter-mountain basins largely separated by the uplifted areas. Erosion of the mountains followed and, in late Cretaceous time, sandstones, conglomerate, shale and extensive beds of coal accumulated in large isolated basins such as that now occupied by the Nanaimo Series on Vancouver Island. Gradual uplift continued so that by Tertiary time the basins were very local and entirely continental. Sandstones and other sediments derived from elevated areas continued to be deposited in the low-lying valleys.

Uplift and mountain building in the Eastern System was delayed until the Laramide Orogeny in early Tertiary time. Unlike the earlier orogenies to the west, no significant granitic bodies were intruded in the Eastern System. In many parts of the Rocky Mountains, Precambrian and Palaeozoic strata were thrust several miles to the east along low-angle westward-dipping fault planes. Thus, these transported older rocks commonly came to rest above younger beds. At the same time and again in late Tertiary time, the eroded Western and Interior System rocks, as well as those of the Eastern System, were again uplifted. Erosion, including glacial scouring, which in places has continued to the present day, formed deep valleys in the elevated rocks and has produced the present configuration of the Coast Range, the Rockies and the intervening mountain chains.

In the Interior System, much lava was deposited on the plateaux at various times during the Tertiary Period, mainly in or about Miocene time. The lavas are chiefly basaltic and apparently welled from long fractures rather than from individual volcanoes. Sandstone, shale and volcanic ash were deposited in local freshwater basins in the same belt.

In latest Tertiary and Pleistocene times, some uplift and minor volcanic deposition occurred in the Western and Interior Systems. Very recent, post-glacial volcanic activity is represented by several well-preserved cinder cones in north, southwest and central British Columbia.

Glaciation, as in other parts of Canada, was widespread in the Cordillera during the Pleistocene Epoch, and glaciers persist today in many mountain systems, chiefly in the

St. Elias and Coast Mountains and the Columbia Ice Field in the Rockies. A large part of the Yukon Territory, however, escaped Pleistocene glaciation because the high St. Elias Mountains barred moisture-laden winds from the Pacific to such an extent that ice did not accumulate in parts of the interior, despite the depressed temperatures of the time. This lack of glaciation was largely responsible for the preservation of the Klondike placer gold deposits.

Innuitian Region.—North of the Arctic Plains and Plateaux, where Palæozoic limestones rest on Precambrian generally-stable crystalline rocks, deep crustal depressions were initiated in late Proterozoic time and received thick deposits of carbonates and shales (miogeosynclinal type) and, in northern Ellesmere Island, volcanics and greywackes (eugeosynclinal type). In the southern basins, Proterozoic sediments are mainly carbonates and coarse to fine clastic sediments. Overlying these conformably are thick layers of lower Palæozoic carbonates which are thicker and include more abundant dark shales to the north. Middle Ordovician gypsum beds extend in places across the southern basins. Carbonates are admixed with muds and sands in parts of the Upper Silurian to Middle Devonian beds, and the influx of these clastic materials probably reflects relatively minor orogenies and periodic uplifts such as the Boothia Arch in the region. Folding of the eugeosynclinal volcanics of northern Ellesmere Island produced land areas from which sands were swept southward to form Upper Devonian non-marine sandstones in the miogeosynclinal basins. The total assemblage of sediments is more than 35,000 feet thick in some districts. The dominant folding of the Franklinian geosyncline, called the Ellesmerian orogeny, occurred near the close of Upper Devonian time. With the exception of the Cornwallis fold belt discussed below, the resulting folds of the Innuitian Region trend southwesterly from northern Ellesmere Island and swing westerly through the Parry Islands. The Cornwallis fold belt interrupts this trend at right angles because it lies along a buried north-trending prong of Precambrian rocks, which extend from exposures of the Boothia Peninsula. This elongate Precambrian basement rose periodically at least six times to produce north-trending faults and folds in the overlying Palæozoic beds of the Cornwallis fold belt, whereas the Franklinian geosyncline was deformed by somewhat younger and more widespread compressional crustal forces.

Following the Ellesmerian orogeny, a vast area including the present Sverdrup Islands and much of western Ellesmere Island was depressed to form the site of deposition of a composite thickness of 60,000 feet of Pennsylvanian to Tertiary volcanics, shales, sandstones, some gypsum and, in the upper part, a thick assemblage of non-marine clastic sediments. The rocks of this Sverdrup Basin were deformed about the end of the Mesozoic Era by the Laramide orogeny. Late Palæozoic gypsum beds, which tend to flow under high pressure, were forced upward to intrude overlying Mesozoic beds. Gypsum diapiric domes later penetrated Tertiary beds.

Arctic Lowlands and Plateaux.—These geological and physiographic divisions lie in large basins separated by arches and belts of exposed Precambrian crystalline rocks. Gently inclined or flat sediments underlying the basins tend to be thin sandstones and limestones near the basal contact with metamorphosed Precambrian rocks but limestones and dolomites of Middle Ordovician to Early Devonian age are the principal rock types and at some localities are estimated to be up to 18,000 feet thick. Shales, sandstones and restricted areas of conglomerates of Middle Devonian to Late Devonian age are normally the youngest rocks preserved.

Arctic Coastal Plain.—This plain comprises late Tertiary or Pleistocene sand and gravels, which dip gently seaward along the northern exposed border of the Innuitian Region. The very young beds cover the extensions of eroded fold belts and the Sverdrup Basin. Although of minor land extent, they or their equivalents probably extend far out on the Arctic continental shelf.

The Interior Plains.—The Interior Plains are underlain by undisturbed or gently flexed or tilted sedimentary strata, which overlap the western border of the Canadian Shield and merge with the eastern foothills of the Cordilleran region. The Shield slopes at a rate of 15 feet per mile under the Great Plains, in the western part of which the overlying strata reach a thickness of 10,000 feet. The older overlying beds have been bevelled by erosion along the border of the Shield, exposing in central Manitoba marine beds of limestone, sandstone and shale of Ordovician, Silurian and Devonian ages. Farther north the exposed Palæozoic strata are mainly Devonian. The Palæozoic formations are overlain by early Mesozoic strata of marine origin and these by both marine and freshwater Cretaceous formations, which are the uppermost strata in much of Saskatchewan and Alberta. In places, however, as at Turtle Mountain in Manitoba and the Cypress Hills in Saskatchewan, these are overlain by remnants of early Tertiary formations.

St. Lawrence and Hudson Bay Lowlands.—The St. Lawrence Lowlands are underlain by marine beds deposited during much of Palæozoic time. Rather similar late Ordovician to Devonian beds are exposed in the Hudson Bay Lowlands. Small areas of Palæozoic beds are preserved at various localities on the Canadian Shield between these two Lowlands and suggest that arms or shallow straits of Palæozoic seas may have connected the present Hudson Bay and the St. Lawrence Lowland areas. The St. Lawrence Lowlands from Quebec City to Windsor are occupied by about one half of the population of Canada, supported by much arable land and major industrial concentrations. These Lowlands are divided by an exposed southeast-trending prong of the Canadian Shield called the Frontenac Axis, which extends into the United States northeast of Lake Ontario. Southwest of the Frontenac Axis, marine sedimentary rocks of Cambrian to Mississippian age rest on buried Precambrian rocks. Known formations there have an aggregate thickness of almost 6,000 feet. Rocks are mainly limestones, shales and sandstones deposited in generally shallow seas.

Surficial Deposits

The continental glaciation of most of Canada has removed weathered bedrock and residual soils and has almost certainly removed some types of ores such as pre-Pleistocene placer gold deposits, laterites, and upper portions of metallic and manganiferous ore deposits, which had formerly been enriched under stable near-surface conditions. Material deposited includes dominantly clastic detritus such as tills, esker gravels, outwash gravels and sands, or rock flour deposited in lakes or shallow seas in the form of multiple layers of varved clay or massive clay beds. Maps showing the surface distribution of these materials, published by federal agencies, reflect some physiographic features and present and potential land use.

Section 2.—Physical Geography

Canada occupies the northern half of the North American Continent with the exception of Alaska and Greenland, extending in longitude from Cape Spear, Newfoundland, at 52° 37' W, to Mount St. Elias, Yukon Territory, at 141° W, a distance of 88° 23' or 3,223 miles. In latitude it stretches from Middle Island in Lake Erie, at 41° 41' N, to the North Pole. The northernmost point of land is Cape Columbia on Ellesmere Island, at 83° 07' N, and the straight-line distance from Middle Island to Cape Columbia is 2,875 miles.

In shape, Canada resembles a distorted parallelogram with its four corners making important salients. In the north the salient formed by the Arctic Archipelago, which penetrates deep into the Arctic basin, guards the northern approaches to the Continent from Europe and Asia and makes Canada neighbour to the Union of Soviet Socialist Republics. In the south the salient of peninsular Ontario thrusts far into the heart of the United States. In the east the salient of Labrador and the Island of Newfoundland commands the shortest crossings of the North Atlantic Ocean and links Canada geographi-

cally with Britain and France. In the west the broad arc of land between Vancouver in southern British Columbia and Whitehorse in Yukon Territory provides the shortest crossings of the North Pacific Ocean between continental North America and the Far East. Canada thus lies at the crossroads of contact with the principal powers and some of the most populous areas of the world.

1.—Approximate Land and Freshwater Areas, by Province or Territory

NOTE.—A classification of land areas as agricultural, forested, etc., is given in Chapter X on Land Use and Renewable Resource Development.

Province or Territory	Land	Freshwater	Total	Percentage of Total Area
	sq. miles	sq. miles	sq. miles	
Newfoundland.....	143,045	13,140	156,185	4.1
Island of Newfoundland.....	41,164	2,195	43,359	1.1
Labrador.....	101,881	10,945	112,826	3.0
Prince Edward Island.....	2,184	—	2,184	0.1
Nova Scotia.....	20,402	1,023	21,425	0.6
New Brunswick.....	27,835	519	28,354	0.7
Quebec.....	523,860	71,000	594,860	15.4
Ontario.....	344,092	68,490	412,582	10.7
Manitoba.....	211,775	39,225	251,000	6.5
Saskatchewan.....	220,182	31,518	251,700	6.5
Alberta.....	248,800	6,485	255,285	6.6
British Columbia.....	359,279	6,976	366,255	9.5
Yukon Territory.....	205,346	1,730	207,076	5.4
Northwest Territories.....	1,253,438	51,465	1,304,903	33.9
Franklin.....	541,753	7,500	549,253	14.3
Keewatin.....	218,460	9,700	228,160	5.9
Mackenzie.....	493,225	34,265	527,490	13.7
Canada.....	3,560,238	291,571	3,851,809	100.0

In size, Canada is the largest country in the Western Hemisphere and the second largest country in the world. Its area of 3,851,809 sq. miles may be compared with that of the Union of Soviet Socialist Republics, 8,649,539 sq. miles,* China (including Taiwan and Pescadores), 3,705,408 sq. miles,* the United States of America (including Alaska and Hawaii), 3,615,211 sq. miles,* and Brazil, 3,286,488 sq. miles.* It is more than forty times the size of Britain and eighteen times that of France. The immense size of the country, while encompassing many resources and seeming to afford much scope for settlement, imposes its own burdens and limitations, particularly because much of the land is mountainous and rocky or is under an arctic climate. The developed portion is probably not more than one third of the total; the occupied farm land is less than 8 p.c. and the productive forest land 25 p.c. of the total. The population of Canada, estimated at 20,405,000 as at June 1, 1967, may be compared with 194,572,000† for the United States (including Alaska and Hawaii) (1965) and with 82,222,000† for Brazil (1965).

The mileages in Table 2 are another indication of the size of Canada. They show the length of communication facilities required between the larger cities, between outlying industrial communities built up around large mining or smelting projects and the nearest cities, and between northern outposts and the supplying cities. In this table, mileage given is for the major means of transport used between the points concerned; air mileages are given for most transcontinental distances.

The length of Canada's southern border adjoining the United States is 3,986.8 miles and the length of the Yukon-British Columbia border adjoining Alaska is 1,539.8 miles.

* United Nations Statistical Yearbook, 1966.

† United Nations Population and Vital Statistics Report, Apr. 1, 1967.

2.—Travel Distances between Certain Cities and Other Points of Interest in Canada

NOTE.—The dash used in this table indicates that the distance concerned is of no particular interest. In each case the mileage given is for the type of travel most generally used—road (H), rail (R), air (A) or water (W); air mileages are given for most transcontinental distances. Water and air routes are given in nautical miles.

¹ Via Strait of Canso.

Politically, Canada is divided into ten provinces and two territories. Each province is sovereign in its own sphere and administers its own natural resources, and upon such resources, as related to topography, position and climate, is based the economy of the province. The resources of the Yukon and Northwest Territories, because of the remoteness, the great extent and the meagre and scattered populations of these areas, are administered by the Federal Government.

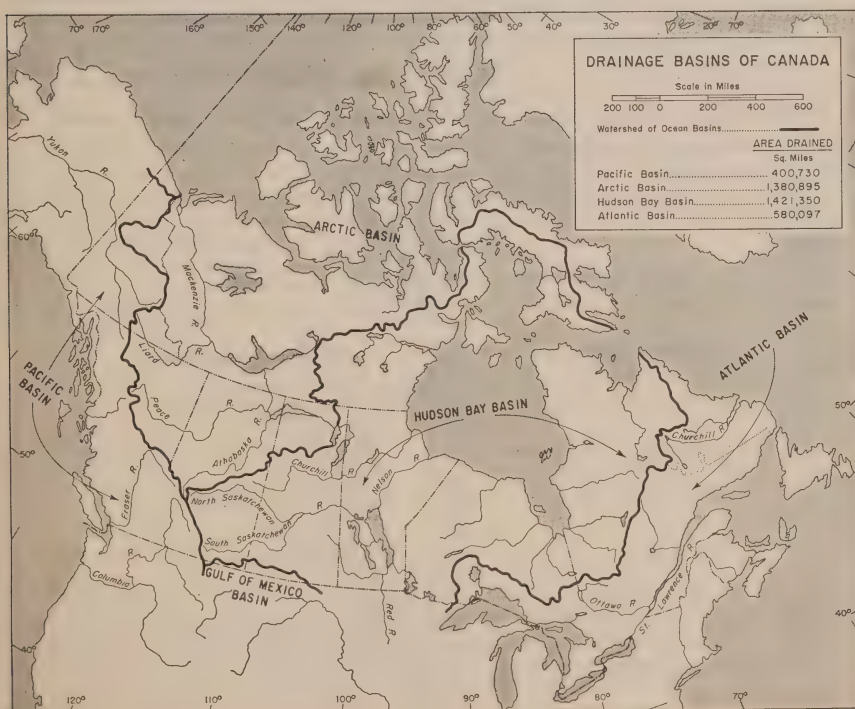

The main physical and economic characteristics of each province and territory are described in some detail in the 1963-64 Year Book; this article is available in reprint form. Also, it should be mentioned that the economic development of the country as a whole, based in the first instance on physical features and later on other factors, has formed regions quite distinct from the political divisions. These economic regions are described in an article appearing in the 1962 Year Book at pp. 17-23.

The Canadian Permanent Committee on Geographical Names, administered by the Department of Energy, Mines and Resources, deals with all questions of geographical nomenclature affecting Canada and undertakes research and investigation into the origin and usage of geographical names. The Committee is composed of representatives of the federal mapping agencies and other federal agencies concerned with nomenclature and a representative appointed by each province.

Subsection 1.—Inland Waters

The inland waters of Canada (not including saltwater areas that are a part of Canada) are extensive, constituting about 7.6 p.c. of the total area of the country. Aside from their basic essentiality to the support of life, Canada's fast-flowing rivers and chains of lakes have had a great bearing on the development of the country and on its economic and social well-being. In the early days of exploration and settlement, they were the avenues of transportation and often the source of subsistence. These functions have now diminished in importance; with the exception of the St. Lawrence and certain water routes in the interior and the Far North, the rivers and lakes have assumed other roles in the domestic, industrial, agricultural and recreational life of the people. They still serve as efficient carriers of pulpwood from the forests to the mills and their waters are harnessed to provide power for industry or are dammed and diverted to irrigate and bring life to otherwise waste land.

The inland waters of Canada are best studied by segregating the main drainage basins. The Atlantic drainage basin is the most important, being dominated by the Great Lakes-St. Lawrence system which drains an area of approximately 678,000 sq. miles and forms an unequalled navigable inland waterway through a region rich in natural and industrial resources. From Duluth, Minn., at the head of Lake Superior to Belle Isle at the entrance to the Gulf of St. Lawrence the distance is 2,280 miles. The entire drainage area to the north of the St. Lawrence and the Great Lakes is occupied by the southern fringe of the Canadian Shield—a rugged, rocky, plateau region over the edge of which tumble many swift-flowing tributary rivers. These rivers, as well as the St. Lawrence itself, provide the electric power necessary to operate the great industries of the area. South of the St. Lawrence, the smaller rivers are important locally. The St. John, for instance, drains a fertile area and provides most of New Brunswick's hydro power.

The Hudson Bay drainage basin, although the largest in area, is the least important economically. Only the Nelson and Churchill Rivers have power potential within economical distance of settled areas. The two main branches of the Saskatchewan River, tributary to the Nelson, drain one of Canada's great agricultural regions and are now the bases of important irrigation projects.

The Arctic drainage basin is dominated by the Mackenzie, one of the world's longest rivers, which flows 2,635 miles from the head of the Finlay River to the Arctic Ocean and drains an area in the three westernmost provinces of approximately 700,000 sq. miles. Except for a 16-mile portage in Alberta, barge navigation is possible from the end of steel at Waterways on the Athabasca River to the mouth of the Mackenzie, a distance of 1,700 miles.

The rivers of the Pacific basin rise in the mountains of the Cordilleran Region and flow to the Pacific Ocean over tortuous, precipitous courses, rushing through steep canyons and tumbling over innumerable falls and rapids. They provide power for large hydro developments and in season swarm with salmon returning inland to their spawning grounds. The major rivers of the basin are the Fraser which rises in the Rocky Mountains and toward its mouth flows through a rich agricultural area, the Columbia which is an international river with a total fall of 2,650 feet during its course and has thus a tremendous power potential, and the Yukon River which is also an international river but, though the largest on the Pacific slope, is at present relatively unimportant economically.

Table 3 lists the principal rivers of Canada and their tributaries. The tributaries and sub-tributaries are indicated by indentation of names; thus the Ottawa and other rivers are shown as tributary to the St. Lawrence, and the Gatineau and other rivers as tributary to the Ottawa.

The outstanding lakes of Canada are the Great Lakes, although only parts of these are in Canadian territory. The International Boundary between Canada and the United States passes through Lakes Superior, Huron, St. Clair, Erie and Ontario. Details are given in Table 4. There are no tides in the Great Lakes although there is considerable variation in water levels caused by strong winds.

4.—Elevations, Areas and Depths of the Great Lakes

Lake	Elevation Above Sea Level	Length	Breadth	Maximum Depth	Total Area	Area on Canadian Side of Boundary

Other large lakes of Canada, ranging in area from 9,500 to 12,300 sq. miles, are Lake Winnipeg, Great Slave Lake and Great Bear Lake. Apart from these, notable for size, are innumerable lakes scattered over that major portion of Canada lying within the Canadian Shield. In an area of 6,094 sq. miles, accurately mapped, south and east of Lake Winnipeg, there are 3,000 lakes. In an area of 5,294 sq. miles, accurately mapped, southwest of Reindeer Lake in Saskatchewan, there are 7,500 lakes.

Subsection 2.—Coastal Waters

The coastline of Canada, one of the longest of any country in the world, comprises the following estimated mileages:—

Mainland—

Atlantic, 6,110; Pacific, 1,580; Hudson Strait, 1,245; Hudson Bay, 3,155; Arctic, 5,770; total, 17,860 miles.

Islands—

Atlantic, 8,680; Pacific, 3,980; Hudson Strait, 60; Hudson Bay, 2,305; Arctic, 26,785; total, 41,810 miles.

A comprehensive description of the coastal waters of Canada would require information from sciences such as oceanography, marine biology and meteorology. However, the basic factor in any study of the oceanic-continental margin is the physical relief of the sea floor, and the scope of the information presented here is therefore restricted to this and a few salient features of the Atlantic, Arctic and Pacific marginal seas surrounding Canada.

Atlantic.—Along this coastal area, the sea has inundated valleys and lower parts of the Appalachian Mountains as well as those of the Canadian Shield. The submerged continental shelf, protruding seaward from the shore, effects the transition from continental to oceanic conditions. This shelf is distinguished by great width and diversity of relief. From the coast of Nova Scotia its width varies from 60 to 100 miles, from Newfoundland 50 to 120 miles (at the entrance of Hudson Strait), and northward it merges with that of the Arctic Ocean. The outer edge of the shelf, known as the continental shoulder, is of varying depths of from 100 to 200 fathoms before the shelf suddenly gives way to the steep declivity leading to abyssal depths. The over-all gradient of the Atlantic continental shelf is slight but the whole area is studded with shoals, plateaux, banks, ridges and islands and the coasts of Nova Scotia and Newfoundland are rugged and fringed with islets and shoals. Off Nova Scotia the 40-fathom line lies at an average of 12 miles from the shore and constitutes the danger line for coastal shipping. The whole floor of the marginal sea appears to be traversed by channels and gullies cutting well into the shelf.

The main topographical features of the Atlantic marginal sea floor are attributed to glacial origin but land erosion is an important factor. Eroded materials are carried seaward by rivers, ice and wind, and wave action against cliffs and shore banks washes away enormous masses that are deposited over the surrounding sea floor. The topography of the continental sea floor is therefore constantly changing and navigation charts of Canada's eastern seaboard must be continuously revised.

Hudson Bay and Hudson Strait bite deeply into the Continent. Hudson Bay is an inland sea 250,000 sq. miles in area having an average depth of about 70 fathoms; the greatest charted depth in the centre of the Bay is 141 fathoms.

Hudson Strait separates Baffin Island from the continental coast and connects Hudson Bay with the Atlantic Ocean. It is 430 miles long and from 37 to 120 miles wide and its greatest charted depth of 481 fathoms is close inside the Atlantic entrance. Great irregularities of the sea floor are indicated but, except in inshore waters, few navigation hazards have been located.

Arctic.—The submerged plateau extending from the northern coast of North America is a major part of the great continental shelf surrounding the Arctic Ocean, on which lie all the Arctic islands of Canada, Greenland, and most of the Arctic islands of Europe and Asia. This shelf is most uniformly developed north of Siberia, where it is about 500 miles wide; north of North America it surrounds the western islands of the Archipelago and extends 50 to 300 miles seaward from the outermost islands.

The topography of the floor of the submerged part of this continental margin is only partly explored but sufficient has been charted to indicate, in common with continental shelves throughout the world, an abrupt break at the oceanward edge to the relatively steep declivity of the continental slope. This slope borders the western side of the Queen Elizabeth Islands and, from it, deep well-developed troughs enter between the groups of islands. Sills across Davis Strait, Barrow Strait and other channels, on which the depth is about 200 fathoms, interrupt the network of deep troughs and separate the Arctic basin from the Atlantic.

That part of the continental shelf bordering the Arctic Ocean in the vicinity of the Queen Elizabeth Islands (see below) is the subject of extensive study. Since 1959 a party based at the joint Canadian-United States weather station at Isachsen on Ellef Ringnes Island has been investigating the oceanography, hydrography, submarine geology, gravity, geomagnetic features and crustal seismic properties of the continental shelf area, carrying out physiographic, hydrological, permafrost and glaciological studies on the islands of the region, mapping the nature, distribution and movement of the sea ice, and running basic topographic control surveys. This work is continuing, with a party in the field from March to September each year, and should eventually cover all of the unmapped parts of the shelf between Greenland and Alaska. The investigations should yield detailed and accurate information on the physical and chemical composition and dynamic characteristics of the Arctic oceanic waters; the bathymetry of the continental shelf and slope and the straits and sounds of the Archipelago; the topography and structure of the shelf and the nature of its sediments, its underlying rocks and possible mineral resources; the structure and physical characteristics of the northern edge of the North American continental platform and its contact with the Arctic Ocean basin; the factors controlling the development of the Arctic landscape and the evolution of the islands; and the changes in sea level, glaciers, sea ice and climate in the recent geological past.

Pacific.—The marginal sea of the Pacific differs strikingly from the other marine zones of Canada. The hydrography of British Columbia is characterized by bold, abrupt relief—a repetition of the mountainous landscape. Numerous inlets penetrate the mountainous coast for distances of 50 to 75 miles. They are usually a mile or two in width and of considerable depth, with steep canyon-like sides. From the islet-strewn coast, the continental shelf extends from 50 to 100 sea miles to its oceanward limit where depths of about 200 fathoms are found. There the sea floor drops rapidly to the Pacific deeps, parts of the western slopes of Vancouver Island and the Queen Charlotte Islands lying only four miles and one mile, respectively, from the edge of the declivity. These great detached land masses are the dominant features of the Pacific marginal sea. As is to be expected in a region so irregular in hydrographic relief, shoals and pinnacle rocks are numerous, necessitating cautious navigation.

Subsection 3.—Islands

The largest islands of Canada are in the North and all experience an arctic climate. The northern group extends from the islands in James Bay to Ellesmere Island which reaches 83° 07'N. Those in the District of Franklin lie north of the mainland of Canada and are generally referred to as the Canadian Arctic Archipelago; those in the extreme north—lying north of the M'Clure Strait-Viscount Melville Sound-Barrow Strait-Lancaster Sound water passage—are known as the Queen Elizabeth Islands.

On the West Coast, Vancouver Island and the Queen Charlotte Islands are the largest and the most important but the coastal waters are studded with many small rocky islands.

The Island of Newfoundland forming part of the Province of Newfoundland, the Province of Prince Edward Island, Cape Breton Island forming part of the Province of Nova Scotia, Grand Manan and Campobello Islands forming part of the Province of New Brunswick, and Anticosti Island and the Magdalen group included in the Province of Quebec are the largest islands off the East Coast.

Notable islands of the inland waters include Manitoulin Island (1,068 sq. miles in area) lying in Lake Huron, the so-called Thirty Thousand Islands of Georgian Bay and the Thousand Islands in the outlet from Lake Ontario into the St. Lawrence River.

Subsection 4.—Mountains and Other Heights

The predominant geographical feature in Canada is the Great Cordilleran Mountain System which contains many peaks over 10,000 feet in height. The highest peak in Canada is Mount Logan in the St. Elias Mountains of Yukon Territory, which rises 19,850 feet above sea level. The highest elevations in all parts of the country are shown in Table 7 in feet above mean sea level.

7.—Principal Heights in each Province and Territory

NOTE.—Certain peaks, indicated by an asterisk (*), form part of the boundary between political divisions. Although their bases technically form part of both areas, they are listed only under one to avoid duplication. Elevations are given in feet above mean sea level.

Section 3.—Federal Government Surveying and Mapping*

The needs for maps and surveys of Canada are met mainly by the Department of Energy, Mines and Resources. Although not all Branches of this Department make surveys and compile maps, many of them are involved in such work either wholly or partly. They compile topographical, geological and aeromagnetic maps, aeronautical and hydrographic charts, as well as specialized maps showing electoral district boundaries, land use and other features. In carrying out these tasks, the Department is guided partly by long-range plans based on general national needs and partly by requests from private enterprise and other government agencies. Some types of maps and surveys are also produced by

* Prepared by H. G. Classen, Public Relations and Information Services, Department of Energy, Mines and Resources, Ottawa.

provincial and private agencies and, to avoid duplication, the Department co-ordinates its work with these bodies. Other types—such as hydrographic and aeronautical charts—are produced exclusively by the Department.

The staff of the Department numbers about 4,000, of whom 1,000 are scientists and engineers and 1,300 are technicians. Each year, some 1,500 men are sent into the field to make surveys and to carry out research. Of the various Branches and Divisions, the following are particularly concerned with surveying and mapping: Surveys and Mapping Branch (geodetic and topographic surveys, electoral maps, aeronautical charts); Marine Sciences Branch (hydrographic charts of sea coasts and inland navigable waters); Geological Survey of Canada (geological features); and Observatories Branch (geophysical maps).

Types of Surveys.—In the field of geodesy, the Geodetic Survey maintains and extends a network of horizontal and vertical control points across Canada. At present, most of the extension work is in the northern parts of the country, whereas in the south greater density and the closing of gaps are the main tasks. The ultimate aim is to have horizontal and vertical control points no farther apart than 20 miles. During the summer of 1966, 20 geodetic parties were in the field extending or strengthening the horizontal and vertical network. In addition, the Geodetic Survey participated in the Satellite Triangulation program in co-operation with the United States Coast and Geodetic Survey. In this program, highly visible artificial satellites are photographed against a star background simultaneously at widely separated points, whose relative distances and positions can then be calculated.

The Topographical Survey is proceeding with the establishment of control points at smaller intervals and the mapping of the country at the most popular scales—1:25,000, 1:50,000 and 1:250,000. Complete map coverage of Canada at 1:250,000 is expected to be completed in 1967. This series will have approximately 925 maps which will be kept up to date by continuing revision. Of the 1:50,000 series, about 7,250 different maps are available, representing one third of Canada's land area. Another 500 maps at the 1:25,000 scale, or $2\frac{1}{2}$ inches to one mile, cover the major cities. The Topographical Survey had 36 officers in the field in 1966, and collaborated with the Geodetic Survey in several municipal control surveys aimed at providing Canadian cities with a firm, permanent basis for planning public works, redevelopment, expansion and other projects.

The Department of Energy, Mines and Resources also carries out legal or property surveys on Crown lands, such as the two northern Territories, the National Parks and Indian reserves; it participates in the survey and demarcation of interprovincial and territorial boundaries; is responsible for the preparation of descriptions and diagrams of federal electoral districts; and is the sole agency in Canada for the preparation of aeronautical charts showing airports, airways, and radio and other aids necessary for air navigation. During 1966, 17 field parties carried out legal surveys in public lands; all work connected with the northern boundaries of Manitoba and Saskatchewan, and the northern part of the boundary between the two provinces, was completed; and five interprovincial and territorial boundary commissions were active. Two new series of aeronautical charts were produced, one to inform aviators of standard instrument departure and the other for the use of traffic controllers at busy airports.

As a service to map-makers and others interested in that field, the Department maintains the National Air Photo Library, a collection of all air photographs taken by or for the Federal Government. During 1966, the Library received 60,803 new photos, bringing the total collection to well over 3,000,000. The sixth edition of the *Air Photo Coverage Map of Canada* was made available to assist users with their orders.

Hydrographic and oceanic surveys in Canada's navigable waters and the adjacent oceans are conducted by the Department's Marine Sciences Branch. Operations are directed from Ottawa and carried out through three regional offices—the Bedford Institute of Oceanography on the Atlantic Coast, the Pacific Coast Regional Office at Victoria and the Central Regional Office at Ottawa. For its surveys and research work, the Branch

operates a fleet of ships and launches, including some chartered vessels; this fleet is being modernized and two new ships are to be launched in 1967. Five of the major ships operate out of the Bedford Institute and four out of Victoria and one chartered vessel is based in the Great Lakes. Land-based parties, equipped with launches, operate on coastal and inland waters. Branch activities are planned to meet the needs of commerce, industry, fisheries, maritime defence, and weather and ice forecasting, and to provide general coastal charts for fishermen and recreational boating in the inland waters. In 1966, 953 navigational charts were on issue, of which 78 were first editions that year, and over a quarter of a million navigational charts were distributed.

Geological surveys provide an inventory of the potential mineral resources of Canada, aid in the discovery of mineral deposits, and assist in other aspects of the national economy influenced by geological factors. Each year approximately 100 parties are placed in the field, about half of whom are engaged in reconnaissance mapping. The first systematic reconnaissance of the geology of Canada is approaching completion, and attention is increasingly given to more fundamental research. Approximately 350,000 copies of maps and reports on geological surveys and research are distributed each year.

Both the Geological Survey and the Observatories Branch carry out geophysical surveys, resulting in maps showing such features as variations in terrestrial magnetism, gravity and seismicity. The geophysicists of the Geological Survey are interested mainly in outlining geological features and those of the Observatories aim at a better over-all knowledge of the earth. Considerable progress was made in 1966 in the preparation of a new earthquake zoning map for Canada for National Building Code purposes, in defining earthquake loads. This information is gathered primarily by a network of 23 first-order seismograph stations, and supplemented by temporary, local studies. In geomagnetism, Observatories staff has been working on the reduction and interpretation of data from the joint Canadian-Scandinavian three-component airborne survey carried out at the end of 1965. Preliminary results have been sent to the five Nordic countries participating. In gravity mapping, the emphasis continued to be placed on the measurement of the gravity field within Canada.

In the drafting and printing of the maps, highly advanced techniques for the automatic transfer of terrain features from air photos to drafting sheets and precise lithographing are combined to assure speedy processing of field data and the production of colourful, easily understood and relatively inexpensive maps for every type of user, from vacationer to town planner and from prospector to pilot. The Department operates a large modern plant to print the maps compiled by its several Branches as well as maps compiled by other government departments and agencies. The Surveys and Mapping Branch has a stock of almost 12,000,000 maps from which it distributes more than 1,000,000 annually.

Section 4.—Archaeology in Canada*

Introduction

Archaeology is taken here to mean the study of prehistory, that period preceding written documentation; in this context, written records mark the period historical and its study, history. Consequently, no reference is made to the lively field of historic sites archaeology which some consider a misnomer since they construe it to be the study of historic buildings, fortresses, houses, trading posts, etc., by the traditional research methods of historians augmented by the techniques of the archaeologist. For this review, prehistory is the subject matter and archaeology its scientific study. This imperfect dichotomy of history and prehistory would be still less applicable to many places outside the Western

* Prepared by scientists of the Human History Branch of the National Museum of Canada as follows: the Introduction and the section on Canadian Eskimo Archaeology by Dr. W. E. Taylor, Jr., Director of the Museum of Human History; the section on Prehistory of Eastern Canada by Dr. J. V. Wright, Chief of the Archaeology Division; and the section on Prehistory of Western Canada by Roscoe Wilmeth and W. N. Irving.

Hemisphere. For Canada, prehistory ends and history begins, generally, with European immigration and settlement, times that vary widely for areas adjacent to the three bordering oceans.

Canadian archaeology divides roughly into three periods of development—that prior to 1945, the first postwar decade, and the interval since 1955. The prewar period, reaching back before Confederation, sheltered a small band indeed, and those pioneers might, in most cases, be called amateurs, since formal training in Canadian archaeology did not exist and archaeology as a scientific discipline was only slowly evolving from mere antiquarianism. Those early workers had many backgrounds. Some, like Diamond Jenness, T. F. McIlwraith and Philleo Nash, were trained in general anthropology; others, and among the best, were self-taught researchers, like Wintemberg, Boyle, Nickerson and Ganong. For example, Nickerson was a railroader who did remarkably advanced field work in Manitoba, and Ganong, in Nova Scotia, was better known for the family chocolate company. Institutional centres were few indeed: McIlwraith taught at the University of Toronto; Boyle worked for the Royal Ontario Museum; and Jenness, Smith, Wintemberg and Leechman served long years in the National Museum of Canada. In addition to those employed in Canada, others from Britain, the United States and Denmark carried out vital research projects in Canada. It was a slow start with humble resources but such men laid the quiet foundation for a larger revealing of Canada's past.

In the 1945-55 period, expansion began. J. N. Emerson began teaching archaeology at the University of Toronto; K. E. Kidd launched his Ontario archaeological research for the Royal Ontario Museum; Charles E. Borden began his on-going work in British Columbia; Richard S. MacNeish and, later, T. E. Lee joined the National Museum of Canada; Wilfred Jury continued his work in southern Ontario; and Henry B. Collins, of the Smithsonian Institution, began a series of arctic projects co-sponsored by the National Museum of Canada. Nevertheless, in 1955 there were still only six people professionally employed in Canada as specialists in Canadian prehistory. A career in Canadian archaeology seemed scarcely more profitable than a career in poetry. A few Canadian students, however, trickled down to the United States where excellent doctoral training, now necessary as archaeology matured, was available and where students could compete for fellowships, then non-existent in Canada.

By 1955 the boom was rumbling in Americanist archaeology and soon it echoed in Canada. Between 1956 and 1967, the number of specialists in Canadian prehistory increased from six to over 30; courses are now given in some 15 universities and the number of museum-employed prehistorians shows a similar increase. The National Museum contains more archaeologists than did all Canada a decade ago. Further, Canadian archaeologists doing research in other countries are also increasing in number. Also, as may be expected, there are now far more funds available for research—not nearly enough but a happy contrast to the pittance of 20 years ago. Salaries and research support facilities have increased as Canadians began to realize the richness and worth of their older heritage and the signs seem to suggest a still-expanding demand. For example, the once sporadic trickle of publications has become a dependable stream of knowledge. Those who went south to graduate school have quite often returned and Canadian archaeology has been vitalized and enriched by the many United States archaeologists who have accepted Canadian positions to carry a large part of what is still very much a pioneer field. It is fair to note that in 1967 the first Canadian doctorate in Canadian archaeology was granted, and fitting that this occurred at Toronto where T. F. McIlwraith had sustained archaeology for 40 professorial years.

Being a pioneer research field, Canadian prehistory contains a provocative and heterogeneous host of research problems. And, too, there are problems of another sort such as inadequate funds, a pinching shortage of qualified scientists, weak antiquities legislation, inept administration of funds from overlapping agencies and the desperate demands for salvage excavation of sites being destroyed by natural agencies such as erosion and by other

effects such as urban expansion, road and dam construction, farming and witless looting. Hence, one could scarcely imagine a more stimulating time to be engaged in Canadian archaeology.

Perhaps a century after Confederation, the end of the beginning of the study of Canadian prehistory is near. Many of the interpretations offered in the following summary of that prehistory may eventually appear foolish in the clearer light of future research. It is suggested that what will endure is an appreciation that Canada has, not a 100 or 400 years, but perhaps 40,000 years of heritage—and, as archaeologists reveal it, Canadians will be broadened and enriched by that vast and varied background.

Prehistory of Eastern Canada

Eastern Canada, consisting of Ontario, Quebec and the Atlantic Provinces, south of the treeline, can be roughly divided into two major archaeological areas—Northern and Southern. Physiographically, the Northern area coincides with the Canadian Shield and the predominantly coniferous forests that cover northern Ontario, most of Quebec, and Newfoundland. The Southern area incorporates southern Ontario, the Eastern Townships and the St. Lawrence Valley of Quebec, and the Maritime Provinces, an area of predominantly hardwood forests.

There is clear evidence that the faunal and floral resources of the Southern area were able to support a far greater prehistoric population than the less kindly endowed Northern area. The richer archaeology of the south, however, has been complicated by the development of local cultural groups which interacted with each other and outside areas in a highly complex fashion. Conversely, the Northern area is characterized by a high degree of cultural similarity which allows certain general interpretations to be drawn from relatively limited archaeological data.

The sequence for both areas has been simplified and this review is intended to serve only as a rough outline of the prehistory of Eastern Canada. There is no reasonable doubt that new data will alter the current picture.

The earliest evidence of man in Eastern Canada dates between 10,000 and 11,000 years ago. In that period small bands of hunters, whose archaeological marker is a distinctive chipped stone lanceolate dart point, roamed the Southern area near the edge of the glacier which covered the north. These people were part of an extensive but thinly distributed population which entered the New World from Asia and rapidly occupied most of North America. Described under the archaeological term "Clovis" the dart heads of these early hunters have been found in direct association with the remains of extinct fauna such as the mammoth and mastodon, although direct evidence for the hunting of such animals in Eastern Canada is lacking.

The events that follow the Clovis occupation are somewhat complex. In western North America the Clovis culture became differentiated into a number of regional complexes which, on the basis of a shared stone-flaking technique called rippled flaking, are collectively termed "Plano". The Plano people like their Clovis ancestors were big game hunters who preyed predominantly on the bison although this generalization is naturally subject to the availability of other large mammals and the regional absence of the bison. Eastward penetration by Plano people seems limited to the Southern area of Ontario and the southern fringe of the Northern area of the same province, which was still covered by glacial ice 9,000 to 7,000 years ago. Their incomplete and weak migration into Eastern Ontario may be explained by the presence in the area of an earlier population. Although the data are very incomplete it appears that, as with Plano, the earlier Clovis population in the east evolved into various regional complexes which have been called Archaic. Early representatives of the Archaic cultures were, therefore, already in possession of most of Eastern Canada before the eastward movement of the Plano cultures began. Indeed, a number of sites have produced associated early Archaic and Plano artifacts indicating that the two populations were in direct contact with one another. Through a series of gradual stages, the Archaic population of the Southern area became more diversified with

numerous local varieties of Archaic culture developing in a number of different directions. Polished stone tools such as adzes and ground slate dart heads appear for the first time along with a wide range of chipped stone artifacts and bone tools. An elaborate burial cult involving the use of red ochre and grave offerings appears at an early date. The subsistence pattern of the Archaic stage also undergoes a change from the preceding Palæo-Indian stage represented by Clovis and Plano. Although big game is still of primary importance, a significant portion of the diet stems from smaller animals, fish and wild vegetable foods. In the Northern area a variety of Archaic markedly different from that noted in the south was apparently developing in a parallel fashion. The Northern complex with its large flaked choppers, blades, distinctive dart heads, and virtual absence of polished stone, probably began its development 6,000 years ago and gradually occupied the territory being vacated by the continental glacier then retreating into the Labrador highland. Contrary to the regional variations seen in the Archaic of the south, the Northern materials are amazingly similar over enormous tracts of land. In the Southern area the Archaic stage terminated with the appearance of pottery at approximately 1,000 B.C. In the northern bush, the Archaic stage is partly replaced by a complex possessing ceramics which entered the area roughly 2,700 years ago.

The introduction of pottery brought the Archaic stage to an end and introduced the Woodland stage of aboriginal cultural development. Divided into early, middle and late periods, the formation of the Woodland stage probably represents the most complex series of events to be seen in the archaeology of Eastern Canada. In the Southern area, Early Woodland pottery, indirectly derived from the southern United States, was adopted by the indigenous Archaic peoples in Quebec and, possibly, the Maritimes. The entry of these ceramics as a body into the remainder of Eastern Canada was blocked by the presence there of Middle Woodland ceramics which had entered the area from both the northwest and the south. Ceramics of the Middle Woodland period, however, appear to be the product of two forces coming from different directions. In the Northern area a Middle Woodland complex possessing distinctive ceramics of inferred Asiatic origin occupied the former territory of the Shield Archaic people in northern Ontario and western Quebec. Indeed, with the exceptions of the Clovis and, to a lesser extent, the Plano people of the Palæo-Indian stage and the Dorset Eskimo occupation of coastal Newfoundland-Labrador and parts of Quebec, the Laurel penetration appears to represent one of the few clear cases of an actual migration of people into Eastern Canada. In all other instances changes in the various cultures appear to have stemmed mainly from the borrowing and modifying of introduced traits and ideas by the indigenous Archaic people. The other Middle Woodland variety of ceramics, attributed to Hopewell of Illinois and Ohio, with possible origins in Central America, were being adopted by Archaic populations of the Southern area. These same people, however, were also adopting additional ceramics from Laurel, thereby ending up with a ceramic complex which represented a miscegenation of Laurel and Hopewell ideas grafted onto an Archaic base which perhaps already possessed Early Woodland ceramics. This confusing ceramic situation appears to have involved the entire Southern area. Other traits such as burial mound ceremonialism and the smoking pipe were also introduced from the Hopewell area. Most of northern Quebec and all of Newfoundland, however, did not accept ceramics and an Archaic stage of culture may have survived in that area to the time of European contact.

From this complex Middle Woodland base, most of the historic tribes of Eastern Canada must have evolved during the Late Woodland period. The exceptions are the Beothuk of Newfoundland who perhaps retained an Archaic form of culture. The Naskapi and some of the Cree-Montagnais of Quebec appear to have lacked pottery but the data are too limited to draw any meaningful conclusions. In the Maritimes the historic Micmac and Malecite probably had pottery but their prehistory is only now being explored. To the west, the Ojibwa, the Algonkin and most of the Cree possessed pottery, usually derived from a number of regional ceramic traditions and, indeed, portions of the Ojibwa and Cree can be traced archaeologically as far back as the tenth century. In the Southern area represented by Southern Ontario and portions of Quebec, the archaeological events that

led to those famed Iroquois tribes—the historic Huron, Petun, Neutral and Onondaga—are relatively well known. We know that corn was being grown before A.D. 1000 and that beans were acquired before A.D. 1450. Sunflower seeds and squash were also present but their dates of introduction are still unclear. Tobacco smoking appears to have become prevalent among these Iroquois people by A.D. 1350.

With the introduction of European goods, diseases and intrigues, the agents of these preceding 11,000 years of history become the subject matter of other disciplines.

Archaeological Work in Eastern Canada, 1966.—Of the eleven major archaeological field projects in 1966, more than half were supported in full or part by the National Museum of Canada contract system. Ontario led the way in activity with the following parties and projects: J. N. Emerson, University of Toronto, continued research on the historic Huron village of Cahigue visited by Samuel de Champlain in A.D. 1615; K. C. A. Dawson of Lakehead University excavated a Laurel village and burial mound site occupied before the birth of Christ; W. A. Kenyon of the Royal Ontario Museum investigated a burial mound along the Rainy River; K. Kidd and R. Vastokas of Trent University were involved in the excavation of a number of sites in the Trent River Valley; J. Bond of Windsor University directed a student excavation of a village site occupied by a little-known Late Woodland population; and J. F. Pendergast of Ottawa continued his investigation of prehistoric Onondaga sites of the St. Lawrence Valley.

In Quebec, C. A. Martijn of Montreal completed a three-year archaeological survey and excavation in the Lake Témiscouata region in the southeastern portion of the province. René Ribes of the Musée d'Archéologie, Trois-Rivières, continued work on sites in the St. Maurice River Valley. Finally, the Société d'Archéologie préhistorique du Québec of Montreal carried out excavation on a large and vitally important multi-component site at Pointe-aux-Buissons on the St. Lawrence River.

In Nova Scotia, salvage excavations were carried out by J. Erskine of Wolfville, N.S. Helen Devereux of the University of Calgary completed her third year of survey and excavation in central Newfoundland which was concentrated on the archaeological identification of the extinct Beothuk.

Prehistory of Western Canada

Western Canada, for the purpose of this discussion, is the area lying west of the Province of Ontario and Hudson Bay, and south of the Arctic littoral, i.e., the Provinces of British Columbia, Alberta, Saskatchewan and Manitoba, and most of the Yukon Territory and the Northwest Territories. It is an area of extremely varied topography, climate and natural resources, features that strongly affected the distribution and density of the aboriginal population.

The date of man's first arrival in the area, coming from northeast Asia via the Bering Strait, remains uncertain. The crucial factors include the chronology of the advances and recessions of the Cordilleran and Continental glaciations, the question of the extent and duration of contact between the two ice sheets, and the problem of the length of duration of the Bering Strait land bridge—matters still in dispute. Human occupation has been documented south of the area within the period of the last major advance, indicating penetration of Western Canada at some earlier date. However, evidence for such earlier movements, still under study in Western Canada, cannot be summarized at the present time. The oldest cultures recognized date no earlier than 9,000 to 11,000 years ago.

The latter are represented by surface finds of projectile points of styles attributed to early big game hunters elsewhere in North America. These are relatively large lanceolate forms characterized by longitudinal fluting, and probably used as points for spears or darts. Two major styles, an earlier Clovis and a later Folsom form, are differentiated in terms of degree of fluting and other attributes. Where found to the south of our area, the earlier type is often associated with kill-sites of mammoth or mastodon, and the latter with various

kinds of extinct bison. In Western Canada, these point types are reported only from the southern part of the prairie area, suggesting that perhaps these cultures were replaced by later ones before the northern part of the prairie region was inhabitable. On the other hand, fluted points have been found far to the northwest, in unglaciated parts of Alaska; their absence from the intervening area remains to be explained.

The succeeding complexes, generally dated from about 8000 to 5000 B.C., are also known only from surface finds, in this case of lanceolate points, lacking flutes and exhibiting a fine parallel flaking technique. They are probably derived directly from the preceding ones, and are part of what is called the Plano Tradition. Big game hunting continued to be the basis of the economy, but the number and distribution of the finds indicate a considerable increase in population and an expansion northward into areas not previously occupied. Similar projectile points have been reported from the Yukon and the southern Northwest Territories, as well as extreme northern Manitoba.

Perhaps contemporary with the early big game hunters of the prairies was a still hypothetical complex called Old Cordilleran, characterized by the occurrence of bipointed, leaf-shaped projectile points. The centre for this complex was in British Columbia, but similar points have been reported from the Yukon and Northwest Territories. Radiocarbon dates indicate a relatively early occupation for at least one site in the Fraser River canyon. However, it has been questioned whether all points of this relatively simple form necessarily represent a single cultural group or time period. In any case, the evidence from Fraser Canyon indicates a quite different economy, in which dependence on salmon fishing already prevailed even at this early date, from that of the area east of the mountains.

In the succeeding period, lasting from approximately 3000 B.C. to about 1 A.D., a number of changes are noticeable. One is an increase in tempo, with alterations in artifact styles, particularly projectile points, following one another in more rapid succession than previously. Another is an apparent increase in the variety of food resources exploited, although this may reflect inadequate knowledge of the food economy of earlier times. Several local cultural variants now become recognizable, but the geographic distribution of certain artifact types indicates considerable contact between them.

In the prairie region, the earlier lanceolate projectile points are gradually replaced by smaller stemmed points with indented bases. The change apparently represents an evolutionary sequence, rather than a series of sharp breaks. Contemporary with the earlier part of this sequence are large side-notched points from southern Saskatchewan and Manitoba, which show affiliations with points from bison-kill and campsites in Nebraska and western Iowa. There are, in fact, many resemblances to what is known as the Archaic tradition in eastern United States and Canada, and it has been suggested that people from the east were moving into the prairie area with the improvement of the climate. Although bison seem to have remained the major food source, there is now evidence of the hunting of birds and small animals and the collecting of shell fish and other foods.

Certain of the point types characteristic of the Prairie occur also in the Boreal Forest west of Hudson Bay, where their relationship to the still hypothetical Shield Archaic tradition is somewhat unclear. The latter tradition is typified by large and small oval bifaces, rough core scrapers, and a few round-based lanceolate points. The same observations apply to the Barren Grounds, at least as far north as Chesterfield Inlet. However, from time to time after about 3000 B.C., the area was pre-empted by cultures from the Arctic, presumably Eskimoan. West of the 110th meridian, a series of cultures possessing some relationship to those of the prairies but with an increment of Asian traits not found to the east and south prevailed for a long but still unmeasured period of time.

Beyond the Rockies, in the Northwest Plateau, the evidence available indicates a continuation of the pattern associated with dependence on salmon fishing. Microblades, like those of the far northwest, are common but probably represent the diffusion of this tool type to the Plateau rather than the migration of northern populations. For the first time in Western Canada, house structures are reported, of semi-subterranean form. That the region was not isolated from the country east of the mountains is confirmed by the

occurrence in the Plateau of projectile point types like those of the Prairies, as well as the finding in Alberta of Plateau artifact types. By the end of this period on the coast of British Columbia, the Northwest Coast culture based on fishing and shell-fish collecting and recognizably similar to that of historic times, is in an early stage of development.

During the period from approximately 1 A.D. to the beginning of historic times, further development in the Prairie area centred around a dramatic increase in the importance of bison hunting. This shift followed the general adoption of the use of buffalo jumps, a hunting technique which consisted of driving the animals over cliffs or steep declines, where they were slaughtered by hunters waiting below. Concomitant with the increasing use of this technique is a continued diminution in the size of projectile points, culminating in the appearance of small, triangular, corner-notched and side-notched forms used as tips for arrows rather than for darts. The appearance of new tool forms for hide-working further reflects the concentration on bison hunting.

Another innovation of this period is the introduction of pottery-making. Occurring only sporadically in the early part of the period, ceramics gradually increased in importance, both in the Prairie area and in the Boreal Forest. Some of the wares show close relationships to the pottery of the woodland region of Minnesota or of the Middle Missouri area of North Dakota, while others seem to occur in Canada only and possibly are of northern origin. Evidence for the spread of population into the area is the presence in southern Alberta of an earthlodge village clearly derived from those of the Missouri.

Beyond the Prairie region, mixed economies continued to prevail, as combinations of hunting of a variety of birds and mammals, fishing, and shell-fish collecting. That relationships with the south continued is shown by the appearance of small corner-notched and side-notched points typical of the Prairie region in areas as far away as the southwest Yukon. In the Barren Grounds, even less information is available than for the previous period; occupations by both Eskimo and Indian groups are indicated, with the former gaining ascendancy in the early historic period.

In British Columbia, the way of life based on salmon fishing continued to develop, with increasing evidence for the importance of wood-working. Here also, small side-notched points made their appearance at about the middle of this period, gradually replacing earlier forms, and indicating the continuation of contact with the area east of the Rockies. Some time during this period the Athabaskan language stock may have spread to its present limits, which embrace a large portion of Western Canada.

Trade goods finally began to appear in the archaeological sites of Western Canada, ushering in the historic period. At this point, if not before, identifications of archaeological complexes with historic tribes can often be made. Such attempts are made difficult by the large-scale displacement of one group by another which resulted from the introduction of the fur trade and the use of fire arms and, in the Prairie area, of the horse. Nonetheless, the assignment of archaeological sites to such widely separated groups as the Salish and the Cree proceeds with growing confidence as excavation continues.

Archaeological Work in Western Canada, 1966.—During the 1966 season, archaeologists were engaged in a large number of field projects throughout Western Canada. Institutions and personnel involved included the National Museum of Canada (J. V. Wright, W. N. Irving, G. MacDonald, R. Wilmeth, J. P. Cook); the University of Manitoba (W. J. Mayer-Oakes, D. C. Jayes, J. V. Chism); the University of Saskatchewan (Z. S. Pohorecky, H. T. MacKie); Saskatchewan Museum of Natural History (G. C. Watson, A. J. Ranere); University of Alberta (A. L. Bryan, R. Gruhn, R. Bonnicksen, F. Taylor); University of Calgary (R. G. Forbis, B. Reeves, C. E. Eyman, J. F. V. Millar, W. C. Noble); Provincial Museum and Archives of Alberta (R. S. Kidd); University of British Columbia (C. E. Borden); Provincial Museum of British Columbia (D. N. Abbott). In addition to these investigations, valuable work was carried out by the provincial archaeological societies of Manitoba, Saskatchewan and Alberta.

The work of some of the institutions listed was in part supported through contracts with the National Museum of Canada. The orientation of the researchers has been either toward the development of regional sequences or toward the solution of broader problems which cut across provincial and national boundaries.

Geographically, most of this work was concentrated in the Prairie region. Other investigators, however, were employed in the Boreal Forest of northern Manitoba, the foothills of Alberta, coastal British Columbia, the southern Northwest Territories, and the northern Yukon. One National Museum of Canada party operated in Alaska, west of the Yukon Border, as well as in the southwest Yukon; another party worked under contract in southwestern Alaska.

Several hundred sites were recorded by surveyors, and over 20 sites, often stratified, were excavated or tested. The broad time span of these sites extended from the possibly pre-glacial age of a site in the Yukon to the historic period, represented by fur trading posts and by Indian camps which yielded European trade goods. Most of the sites, however, fell within a period of 1,000 years before and 1,000 years after the beginning of our era. Field work being carried out in 1967 will fill at least some of the geographical and temporal gaps in knowledge of the prehistory of Western Canada.

Canadian Eskimo Archaeology

Archaeology in arctic Canada began with the pioneering work of Therkel Mathiassen of the Nationalmuseet, Denmark, for in 1922-25 he worked in the Foxe Basin-northern Baffin Island area as archaeologist on the famous Fifth Thule Expedition. The Thule and Dorset cultures, noted below, were first defined in 1925 by Mathiassen and by Diamond Jenness of the National Museum of Canada, respectively. There were only a very few other pre-war archaeological forays into arctic Canada until 1948 when work resumed; its rate and range have since increased steadily with many more scientists available to exploit the remarkable financial and logistical improvements of the past 20 years. The improvements run from walking boots to sleeping bags, and from aeroplanes to archaeological methods. Surveys are being pushed into the vast, unstudied areas and intensive work is focusing on key regions while the recovered data are subject to more kinds of analysis than ever before.

Although much indeed remains unknown, Canadian Eskimo origins can be traced back about 5,000 years to Bering Strait and from there the trail wanders away through several routes into Asia. Within the Canadian tundra the story seems readily divisible into four major periods or stages. First there was the Pre-Dorset culture stage of people with a basically Eskimo way of life and these drifted eastward across the deglaciated Canadian Arctic from Alaska to Greenland and Ungava. A culture stage, as yet best known in the Denbigh Flint complex, is the Alaskan parent culture of this population, and it probably existed there about 3000 B.C. As in the Denbigh Flint complex, artifact collections from Pre-Dorset sites are characterized by chipped flint tools, an inventory marked by burins and microblades, and these tool types echo an old Asian heritage. Pre-Dorset people, with a technology adapted to the tundra coast and interior, harpooned sea mammals, harvested fish and hunted caribou, musk-oxen and birds. Radiocarbon dates suggest that the small, seasonally nomadic bands of Pre-Dorset hunters reached north-eastern Greenland and Hudson Strait about 2000 B.C. The second major stage, Dorset culture, reveals again thinly scattered, small bands of hunters who moved with the seasons hunting seal, walrus, caribou, birds and other game and who, like the tourists now, exploited the annual summer runs of char in arctic rivers. These hunters used skin tents in summer and, for winter, sheltered in small settlements of a few, semi-subterranean huts. Toggling harpoons, barbed spears, chipped flint and rubbed slate tools, microblades, bone needles and adzes mark their remnant inventories. They probably made tailored fur clothing and skin boats and there is sound evidence for their having had small, man-hauled sleds. Albeit rare, a most remarkable product of the Dorset culture is its art, tiny carvings

in antler, ivory and wood, of animals, birds, fish, humans and grotesque monsters. Some are stylized or abstracted and others precisely realistic, and commonly they have been fashioned with a sureness of form and impressive sophistication. A recent analysis of 125 of these art pieces indicates they were not for amusement or decoration, not *l'art pour l'art*, but rather that this was an art of the supernatural, an art concerned with Shamanism, burial practices and sympathetic magic. Dorset culture has a rather different geographic distribution than Pre-Dorset although each covered a vast part of arctic North America: Pre-Dorset, coming from Alaska, reached at least as far south as Churchill in Manitoba, and to Mansel Island and Ivugivik in northwestern Quebec as well as to many points around the Greenland coast. Dorset is known as far west as Melville Island, Holman and Bernard Harbour, at several localities about Greenland and south to Cape Ray, the southwestern extremity of Newfoundland Island. Although found well down the east side of Hudson Bay, no Dorset sites are reported for the Bay's west coast south of Chesterfield Inlet.

It seems that in the centuries around 1000 B.C. to 800 B.C., Pre-Dorset evolved into Dorset culture within the Canadian central Arctic and very probably that change incorporated some ideas, some traits and techniques, diffused to the Dorset area from outside, possibly from Alaska, perhaps from the Barrenlands and perhaps, too, from prehistoric Indian cultures north of the Great Lakes and the St. Lawrence River. Dorset, an Eskimo culture so far as we know, persisted until about A.D. 1300. It began to disappear shortly after A.D. 900, being replaced by Thule culture which occupies the third major stage of Canadian Eskimo archaeology. Thule was a fully Eskimo culture with an original homeland on the north Alaskan coast. It was carried eastward across the Canadian Arctic to Greenland and Labrador by a population spread that nearly obliterated Dorset culture except in an archaeological sense. Unlike Dorset, Thule hunters harvested the baleen whales using umiaks and an elaborate whaling harpoon gear and, in further contrast to Dorset, had dogs, dog-pulled sleds and sturdy winter houses often built partly of whale bones. Their art is much less impressive. The fourth stage, that of the recent Central Eskimo, can be said to date from the eighteenth century when Thule culture evolved into that of the Canadian Eskimo as met by nineteenth century explorers. The greatest differences between Thule and recent Eskimo centred on the decline of baleen whaling, the consequently greater degree of nomadism, and a shrunken area of population distribution. Parenthetically, the Eskimos encountered by Martin Frobisher in 1576-77 were surely Thule culture Eskimo, including the marksman whose arrow caught Sir Martin in the seat of his pants. Conversely, the Skraelings encountered by Eric the Red in southwest Greenland and some met by his followers in Vinland were probably Dorset culture people. Later, Thule people in western Greenland left sites in which Danish archaeologists have found many and clear signs of Viking influence on the old, local Eskimo way of life.

Archaeological Work in the Canadian Tundra, 1966.—If arctic field research was very rare before 1945 and rather spotty in occurrence up to 1955, then the seven field projects reported here for 1966 do indeed reflect the marked increase of the past decade. In 1966, M. S. Maxwell, Michigan State University, continued work on some sites in the Lake Harbour region of the Northwest Territories; these sites, providing a remarkable chronological sequence of human occupation, range from an early Pre-Dorset site, radiocarbon-dated to 2130 B.C., through a series of Dorset, to Thule culture villages. This work, begun by Maxwell for the National Museum of Canada, will continue in 1967. In 1966, Elmer Harp, Dartmouth College, began a major experiment in the application of advanced aerial photographic techniques to regional archaeological survey in the tundra zone. The planned first stage of this work was completed in 1966 and, in 1967, Harp will take a crew to the selected area—the southeastern coast of Hudson Bay—for the field work phase of his project. In 1966, T. E. Lee, working for the Centre d'Études Nordique of Université Laval, excavated a site on Pamiok Island on the west side of Ungava Bay;

Artifacts representing three cultures—Pre-Dorset, Dorset and Thule—that successively inhabited the Canadian Arctic from about 2500 B.C. to recent Eskimo culture of the eighteenth century

Pre-Dorset (2500 B.C. — 800 B.C.)

Dorset (800 B.C. — 1300 A.D.)

Thule (900 A.D. — 1750 A.D.)

Pre-Dorset

1. End scraper
2. Burins
3. Quartzite blade
4. Flint side blades
5. Microblade
6. Adze head
7. Harpoon head
8. Weapon side prong
9. Flint flaker

Dorset

1. Harpoon point
2. Ivory swans
3. Ivory maskette
4. Bone harpoon head
5. Chipped stone knife blade
6. Knife handle
7. Bone needles
8. Fish spear head

Thule

1. Ivory comb
2. Wooden doll
3. Ivory thimble holder
4. Ground slate point
5. Ivory bird figure with female torso and head
6. Ivory toggle in the form of a bear head
7. Ulu with slate blade
8. Wooden sea-gull hook

further work is planned there for 1967. In 1966, Bernard Saladin d'Anglure, of the Université de Montréal, was sponsored by the National Museum of Canada to prepare casts of a unique set of occurrences—Dorset-period petroglyphs of human faces or masks cut into outcropping soapstone bedrock. Saladin d'Anglure had found these during his 1961 and 1965 field research in the Wakeham Bay region on the south coast of Hudson Strait. Donald MacLeod, National Museum of Canada, while salvaging an early prehistoric Indian site near Twillingate in Newfoundland, discovered and sampled a large Dorset-period Eskimo site nearby. As a summer officer of the National Museum of Canada, Robert J. McGhee conducted survey and excavations at the Kuuk River, Kuujuaa River, and Holman regions of the west coast of Victoria Island in the Northwest Territories. McGhee found scant traces of Pre-Dorset settlement, productive early and middle Dorset period sites, some interesting Thule remains, small sites of the historic Copper Eskimo of the region and, perhaps most important of all, a site that seems to indicate an evolutionary transition from the prehistoric Thule culture to the historic Copper Eskimo culture.

Peripheral to arctic Canada, several archaeological parties took to the field in Alaska, three of them sponsored by or conducted by scientists of the National Museum of Canada. In Greenland, Danish archaeologists, generally with the sponsoring of the Nationalmuseumet in Copenhagen, continued their decades of arctic work and among the most pertinent is Count Eigil Knuth's persisting excavations of Pre-Dorset sites in northernmost Greenland.

PART II.—PUBLIC LANDS, WILDLIFE AND FLORA*

Section 1.—Federal and Provincial Public Lands

In Table 1, classifying the area of Canada by tenure, items 2, 3, 4 and 5 are obtained from Federal Government sources and items 1, 6, 7 and 8 from provincial government sources.

* No information on the flora of Canada is given in this publication but the reader is referred to a detailed special article on the subject, prepared by Dr. Homer J. Scoggan of the National Museum of Canada, which appears in the 1966 Year Book at pp. 35-61.

1.—Total Area classified by Tenure (circa) 1966

Item	Nfld.	P.E.I.	N.S.	N.B.	Que.	Ont.
	sq. miles	sq. miles	sq. miles	sq. miles	sq. miles	sq. miles

Totals.....	251,000⁹	251,700	255,285	366,255	1,511,979	3,851,809⁹

¹ Includes Gatineau Park (107 sq. miles) and Quebec Battlefields Park (0.36 sq. mile) which are under federal jurisdiction but are not technically National Parks. ² Less than one square mile. ³ Sect. 46 of the Crown Timber Act which authorized provincial forest reserves was repealed Mar. 25, 1964; all such lands are included in item 6.

⁴ Includes 952,849 sq. miles set aside by Order in Council as native game preserves in which only Indians and Eskimos may hunt, but which are not regarded as National Parks. ⁵ Includes that part of Wood Buffalo Park in Alberta (13,675 sq. miles); this park, although established under the National Parks Act, is administered by the Department of Indian Affairs and Northern Development. ⁶ That part of Wood Buffalo Park in N.W.T.

⁷ This forest experiment area of 25 sq. miles is also included in National Parks figure. ⁸ Includes 1,945 sq. miles of provincial park land within provincial forest reserves. ⁹ Does not add because of duplications; see footnotes ⁷ and ⁸.

Federal Public Lands.—Public lands under the administration of the Federal Government comprise lands in the Northwest Territories including the Arctic Archipelago and the islands in Hudson Strait, Hudson Bay and James Bay, lands in Yukon Territory, ordnance and admiralty lands, National Parks and National Historic Parks and Sites, forest experiment stations, experimental farms, Indian reserves and, in general, all public lands held by the several departments of the Federal Government for various purposes connected with federal administration (see Table 1). These lands are administered under the Territorial Lands Act (RSC 1952, c. 263) and the Public Lands Grants Act (RSC 1952, c. 224) which became effective June 1, 1950 and replaced previous legislation.

The largest areas under federal jurisdiction are in the Northwest Territories and Yukon Territory where only 89 sq. miles of a total area of 1,511,979 sq. miles are privately owned. This part of the national domain, with the exception of the islands in Hudson Bay and James Bay, is all north of the 60th parallel of latitude and occupies about 40 p.c. of the surface of Canada. It is under the administration of the Department of Indian Affairs and Northern Development.

Provincial Public Lands.—Public lands of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia (except the Railway Belt and Peace River Block) have been administered since Confederation by the provincial governments. In 1930 the Federal Government transferred the unalienated portions of the natural resources of Manitoba, Saskatchewan and Alberta and of sections of British Columbia to the respective governments, and all unalienated lands in the Province of Newfoundland, except those admini-

stered by the Federal Government, became provincial public lands under the Terms of Union on Mar. 31, 1949. All land in the Province of Prince Edward Island has been alienated except 130 sq. miles under federal or provincial administration.

Information regarding provincial public lands may be obtained from the respective provinces. (See the Directory of Sources of Official Information, Chapter XXVII, under "Lands and Land Settlement".)

Subsection 1.—National Parks

Canada's National Parks are the result of the Federal Government's efforts to preserve natural areas of outstanding scenic and biological interest for the benefit of the public. The national park concept, which began with the establishment of Yellowstone National Park in the United States in 1872, was soon afterwards applied in Canada. In 1885, the Canadian Government reserved from private ownership the hot mineral springs of Sulphur Mountain in what is now Banff National Park. Two years later, this 10-sq. mile reserve was extended to 200 sq. miles and named Rocky Mountain Park, the first federal park in Canada. In the same year, Queen Victoria Niagara Falls Park, the first provincial park, was established by the Ontario Government to protect the public's right to view the great natural wonder of Niagara Falls. Two land reserves in southern British Columbia—Yoho and Glacier—were established by the Federal Government in 1886, a reserve in the Waterton Lakes area of southern Alberta in 1895, and an area of 4,200 sq. miles around Jasper, Alberta, in 1907. These four reserves, all in the western mountain ranges, joined Banff as the nucleus of the National Park system when the Dominion Forest Reserves and Parks Act was passed by Parliament in 1911. The Act also provided for a distinct National Parks Branch in the Federal Government to protect, administer and develop the parks.

By 1935, nine more National Parks had been established. Three of these were in Ontario and consisted of federally owned Crown land; one in Saskatchewan and one in Manitoba were former forest reserves; Wood Buffalo National Park, straddling the Alberta-Northwest Territories border and occupying an area of 17,300 sq. miles, making it the largest national park in the world, was established as a refuge for the largest surviving herd of Buffalo in North America; Elk Island National Park near Edmonton was also established as a preserve for buffalo; and Mount Revelstoke and Kootenay National Parks, scenic areas in southern British Columbia, were established by agreement between the Federal and British Columbia Governments.

The parks added to the system since 1935 were set up with the co-operation of provincial governments which made lands available for National Park purposes. All lands suitable for National Parks are now under the administration of provincial and territorial governments and a new National Park may be established by Act of Parliament only after the land for it has been acquired by the provincial government and transferred, together with all its mineral and other resource rights, to the administration of the Federal Government.

National Parks are now under the jurisdiction of the Minister of Indian Affairs and Northern Development and the National and Historic Parks Branch and are administered under the National Parks Act enacted in 1930 (RSC 1952, c. 189) and various park regulations. The purpose of the parks and the objectives of their management are set out in that Act, which dedicates the parks to the people of Canada for their "benefit, education and enjoyment" and instructs that they are to be maintained and used so as to leave them unimpaired for the enjoyment of future generations.

An important step in the evolution of National Park administration was taken when all policies regarding the parks were reviewed and consolidated in a statement that was

approved by the Government and announced in the House of Commons on Sept. 18, 1964. The main points of this policy statement, which will guide administration and provide objectives for planning and development, are:—

- (1) National Parks are established to preserve for all time the most outstanding and unique natural features of Canada for the benefit, education and enjoyment of Canadians as part of their natural heritage. They are dedicated forever to one use—to serve as sanctuaries of nature for rest, relaxation and enjoyment. No exploitation of resources for any other purpose is permitted. All development must contribute to public enjoyment and conservation of the parks in a natural condition.
- (2) Zoning will be used to guide development and to preserve park values. Visitor services will be grouped generally to visitor service centres, a definition that applies to existing townsites.
- (3) National Parks cannot meet every recreational need; the most appropriate uses are those involving enjoyment of nature and activities and experiences related to the natural scene.
- (4) The Federal Government assumes the cost of administration and protection in the parks and provides basic facilities for public use, such as roads, trails, campgrounds, picnic areas, nature interpretation and utilities. Other facilities beyond basic requirements, such as hotels, motels, restaurants, gas stations, stores and other special services, are provided by private enterprise.
- (5) Park residents and businesses should be in the same economic position as those operating outside the National Parks and this principle governs the approach to charges, rentals and fees. The users of special services such as swimming pools, marinas, golf courses and fully serviced campgrounds should pay the operation and maintenance costs of these publicly operated facilities. In general, permanent and seasonal residents should be limited to persons providing basic services to park visitors and to the park community.
- (6) All decisions affecting public development and the activities of private enterprise must be governed by the national interest as expressed by the National Parks Act.

In addition to the National Parks, which preserve natural features, National Historic Parks and Sites preserve and identify the places important in the history of Canada. The National Historic Parks are military or fur-trading forts that have been preserved, or historic buildings or reconstructions of historic buildings and most of them have museums associated with them. Hundreds of monuments or plaques commemorating personages or events have been erected across the country. A site is declared of national historical significance on the recommendation of the Historic Sites and Monuments Board of Canada, an advisory board of historians representing all provinces.

The National Parks and National Historic Parks and Sites are administered by a director and three regional directors who are responsible for operations in the Western Region, the Central Region (Ontario and Quebec) and the Atlantic Region. Each director is advised by representatives of the four staff divisions of the Branch—Financial and Management, National Parks Service, Canadian Historic Sites, and Engineering and Architectural. A resident superintendent manages each park and directs a staff of park wardens who protect the park and its natural features and enforce park regulations, park naturalists who explain the park to visitors and offer various educational services, and other administrative, maintenance and visitor service personnel.

Each park is being developed to yield the recreational potential for which it is suited and sightseeing, camping, fishing, photography, hiking and nature study are the most popular recreations common to the 18 parks that are accessible to the public. There are campgrounds in each park; daily charges are \$1, \$1.50 or \$2 a day, depending on the services provided. A vehicle admission fee, varying from 25 cents for a single entry to \$2 for an annual licence good for all parks, is payable on entering all parks in Western Canada and Point Pelee National Park in Ontario; there is no charge for motor vehicles entering parks in the Atlantic Provinces.

2.—Location, Year Established, Area and Characteristics of National Parks and of National Historic Parks and Sites

Park	Location	Year Estab- lished	Area	Characteristics
			sq. miles	
National Parks				
Terra Nova.....	On Bonavista Bay, Newfoundland, 205 miles north of St. John's.	1957	153.0	Rocky headlands, wooded interior areas, off-shore and freshwater fishing. Serviced campground and cabin accommodation.
Prince Edward Island.	North shore of Prince Edward Island.	1937	7.0	Strip 25 miles long on shores of the Gulf of St. Lawrence. Fine bathing beaches. Hotel and cabin accommodation. Serviced campgrounds.
Cape Breton Highlands	Northern part of Cape Breton Island, N.S.	1936	367.0	Rugged Atlantic coastline with mountainous background. Fine seascapes. Hotel and cabin accommodation. Serviced campgrounds.
Kejimikujik.....	Interior of southwestern Nova Scotia near Maitland Bridge.	¹	150.0	Newest National Park still at early stage of development.
Fundy.....	On Bay of Fundy between Moncton and Saint John in New Brunswick.	1948	79.5	Interesting rock formations on coast and rolling hills inland. Motel and cabin accommodation and campgrounds.
Georgian Bay Islands..	In Georgian Bay, 3 miles by water from Honey Harbour, Ont.	1929	5.4	Camping, canoeing, hiking, swimming, fishing and boating opportunities. Unusual geological formations on Flowerpot Island, off Tobermory on Midland Peninsula. Accessible by boat only.
Point Pelee.....	On Lake Erie near Leamington, in southwestern Ontario.	1918	6.0	Most southerly part of Canadian mainland. Fine bathing beaches. Unusual flora. Resting place for migrating birds. Campground.
St. Lawrence Islands...	In St. Lawrence River between Brockville and Kingston, Ont.	1914	260.0 (acres)	Mainland area and 14 islands with docks, campgrounds and picnic areas. Representative selection of the Thousand Islands. Islands accessible by boat only.
Riding Mountain.....	Southwestern Manitoba, west of Lake Winnipeg.	1929	1,148.0	Woodland escarpment with fine lakes. Fishing, swimming, trail-riding, hiking and golfing. Visitor services in Wasagaming townsite. Campgrounds.
Prince Albert.....	Central Saskatchewan, north of Prince Albert.	1927	1,496.0	Forested region dotted with lakes and interlaced with streams. Fishing, swimming, boating and golfing. Marina. Visitor services at Waskesiu townsite.
Banff.....	Western Alberta, on east slope of Rockies, 65 miles from Calgary.	1885	2,564.0	Best known and most popular of the National Parks. Magnificent scenery. Mineral hot springs. Resort facilities at Banff and Lake Louise. Skiing developments at Mount Norquay, Mount Whitehorn, Sunshine, Skoki and Temple. On Trans-Canada Highway.
Elk Island.....	Central Alberta, near Edmonton.	1913	75.0	Fenced preserve containing large herd of buffalo; also deer, elk and moose. Popular picnic and day-use area. Cabin accommodation and serviced campground.
Jasper.....	Western Alberta, on east slope of Rockies, 235 miles from Edmonton.	1907	4,200.0	Mountainous area and noted wildlife sanctuary. Majestic peaks, icefields, beautiful lakes and famous resort, Jasper. Mineral hot springs. Connected with Banff by scenic Banff-Jasper Highway. Accessible also by rail. Hotel and cabin accommodation and campgrounds.

¹ Not yet formally established.

2.—Location, Year Established, Area and Characteristics of National Parks and of National Historic Parks and Sites—continued

Park	Location	Year Estab- lished	Area	Characteristics
			sq. miles	
National Parks—concluded				
Waterton Lakes.....	Southern Alberta, adjoining Glacier Park in Montana, U.S.A.	1895	203.0	Canadian section, Waterton-Glacier International Peace Park. Mountainous area with spectacular parks and beautiful lakes. Hotel, motel and cabin accommodation. Serviced and unserviced campgrounds.
Glacier.....	Southeastern British Columbia, on summit of the Selkirk Range.	1886	521.0	Superb alpine region, towering peaks, glaciers and forests. Climbing, hiking and camping. On Trans-Canada Highway. Visitor services at Rogers Pass.
Kootenay.....	Southeastern British Columbia, on west slope of Rockies.	1920	543.0	Includes Vermilion-Sinclair section of Banff-Windermere Highway. Broad valleys, deep canyons, mineral hot springs. Hotel and cabin accommodation. Serviced and unserviced campgrounds.
Mount Revelstoke....	Southeastern British Columbia, on west slope of Selkirks.	1914	100.0	Mountain-top plateau with rolling alpine meadow and picturesque tarns.
Yoho.....	Eastern British Columbia, on west slope of Rockies.	1886	507.0	Lofty peaks, magnificent waterfalls, colourful lakes. Yoho and Kicking Horse Valleys. Hotel and cabin accommodation. Serviced and unserviced campgrounds.
Wood Buffalo.....	Partly in Alberta, and partly in Northwest Territories, between Athabasca and Slave Rivers.	1922	17,300.0	Largest National Park in world. Home of largest remaining herds of plains and wood bison and nesting ground of whooping crane. Accommodation at and access by boat and aircraft from Fort Smith, N.W.T.
National Historic Parks				
			acres	
Signal Hill.....	St. John's, Nfld.....	1958	243.4	Site of 1762 battle between French and British and of many fortifications. Marconi made first transatlantic wireless transmission here in 1901.
Fort Amherst.....	Prince Edward Island, near Rocky Point.	¹	222.0	Remaining earthworks of British fort built after 1758.
Fort Anne.....	Annapolis Royal, N.S.....	1917	31.0	Site of French fort first built about 1635, finally captured and occupied by British in 1710. Museum and well-preserved earthworks.
Fortress of Louisbourg.	Cape Breton Island, N.S., 25 miles from Sydney.	1940	13,000.0	Walled town built by French 1713-58 and demolished by British 1759. Being partially reconstructed. Archaeological investigations in progress.
Halifax Citadel.....	Halifax, N.S.....	1951	20.0	Fortress constructed in 1820s and in 1850s. Museum.
Port Royal.....	Port Royal, N.S., 8 miles from Annapolis Royal.	1940	20.5	Reconstruction of "Habitation"—first fort built in 1605 by Champlain and DeMonts.
Alexander Graham Bell	Baddeck, N.S.....	¹	21.0	Museum containing mechanical and documentary records of research by the inventor.
Grand Pré.....	Grand Pré, N.S.....	1957	20.0	Commemorates the story of the Acadians and the New England Planters. Museum.
Fort Beauséjour.....	New Brunswick, near Sackville.	1926	93.0	Site of French fort erected in mid-1700s. Museum.
Fort Chambly.....	Chambly, Que.....	1940	2.5	Fort built by English in 1709-11. Museum.

¹ Sites for which visitor data are available.

Subsection 2.—Provincial Parks

Most of the provincial governments of Canada have established parks within their boundaries. Some of these, particularly in Quebec and Ontario, are wilderness areas set aside in order that some portions of the country might be retained in their natural state without change brought about by the hand of man. Most of them, however, are smaller areas of exceptional scenic or other interest which are easily accessible and are equipped

or slated for future development as recreational parks with camping and picnic facilities. The more important parks in each province are mentioned briefly in the following paragraphs.

Newfoundland.—There are 78.5 sq. miles of provincial parkland reservations in Newfoundland. Of the total area, 26 sq. miles are at present utilized for public recreation and the remaining 52.5 sq. miles are as yet undeveloped. The active parkland consists of three regional parks, each having an area of about 8 sq. miles, and 18 roadside parks with camp and picnic facilities, each having an area of about 100 acres.

In early 1966 arrangements were made under the federal Agricultural and Rural Development Act (ARDA) program to establish 12 more provincial parks in Newfoundland within the next two years. The parks will be located in various sections of the province and each will contain 25 camping areas, 25 picnic areas and swimming facilities, with associated roads, trails, clearings and bridges.

Prince Edward Island.—Twenty areas totalling 900 acres have been developed as provincial parks including Strathgarny Park, a 40-acre tract of land on the Trans-Canada Highway between Charlottetown and Borden, which is an excellent picnic site and campground with its hardwood groves, fresh spring water and beautiful view over the West River and the surrounding country; Lord Selkirk Park, an area of 30 acres at Eldon, is of historic significance as the place where Jacques Cartier first landed on Prince Edward Island; Brudenell River Park, comprising 80 acres at Roseneath, has a considerable area of woodland and runs to the shore of the Brudenell River; Jacques Cartier Park, an area of 13 acres at Kildare Beach four miles from Alberton, is of historic significance as the place where Jacques Cartier first landed on Prince Edward Island; Green Park, 27 acres on the Trout River, is an attractive combination of land, trees and water and is also of interest as a historic shipbuilding centre; and Cabot Park at Malpeque, named in honour of the famous explorer, John Cabot, is a 16-acre area with beautiful sandy beaches and an interesting museum. Several small parks have been developed or are under development. The parks are maintained by the Department of Tourist Development. A fee of \$1.50 is charged for serviced tent and trailer sites and of \$1 for unserviced sites.

Nova Scotia.—Steady progress is being made in establishing a provincial park system in Nova Scotia, having the ultimate goal of providing facilities at 20 to 25 camping-picnic parks and some 60 picnic parks. During 1967 there were in operation 12 camping parks, 39 picnic parks and 10 roadside picnic sites. Ten additional camping parks are planned for development in 1967-68, as well as additional picnic parks. Under a land acquisition program, the province has acquired over 9,000 acres for park purposes and it is intended that recreational holdings will continue to increase over the next few years. A beach acquisition program is also in progress. Progress is being made on the recreation section of the Canada Land Inventory program; it is anticipated that the whole program will be completed by March 1968.

New Brunswick.—The Department of Natural Resources is responsible for the development of the provincial park system, which includes 15 regional parks ranging in size from 25 to 200 acres, 19 picnic campgrounds and 30 roadside picnic grounds. All picnic and camping grounds contain tables, some form of toilet facility and a potable water supply but more elaborate facilities are available in the larger parks. Most parks are adjacent to or easily accessible from main trunk roads. No entrance fee is charged at any of the sites, but a daily camping fee of \$1 to \$1.50 is in effect at 20 of the larger parks and campgrounds.

The total number of visitors to provincial parks in 1966 exceeded 1,300,000, campers numbering 113,110; 74 p.c. of the campers using park sites come from outside the province and about 40 p.c. of the day-use visitors are non-residents. Most of the park sites are located in rural areas, fairly evenly distributed throughout the province. A five-year

ARDA program of expansion and improvement of park and campground facilities is being undertaken, which will include the development of approximately 1,000 tent and trailer sites, accommodation for day-use of beaches, forest and wildlife recreation areas, scenic lookouts, etc., land purchase and provision of special facilities where warranted by intensity of use, such as boats, ramps, docks, canteens and playgrounds.

The Department maintains a Game Farm at Magnetic Hill near Moncton where various species of wildlife to be found in the province are displayed.

Quebec.—The Province of Quebec has seven provincial parks and 12 fish and game reserves. Four of the park areas are quite extensive. La Vérendrye Park, 140 miles northwest of Montreal, has an area of 4,953 sq. miles; Laurentide Park, 30 miles north of Quebec City, has 3,613 sq. miles; Mont Tremblant Park, 80 miles north of Montreal, 920 sq. miles; and Gaspésian Park, in the Gaspé Peninsula, 514 sq. miles. Mont Orford Park, situated 15 miles west of Sherbrooke, has an area of 16 sq. miles and Oka Park, near Oka, 1.5 sq. miles. Newest addition to the provincial parks is the St. Maurice Park, a 131-sq. mile area north of Shawinigan in Champlain County.

Fish and Game Reserves together occupy over 43,000 sq. miles. The Chibougamau Reserve, the Mistassini Reserve and the Assinica Reserve, all northwest of Lake St. John, have areas of 3,400, 5,200 and 3,850 sq. miles, respectively, and farther north is the James Bay Reserve with an area of 25,000 sq. miles. The Aiguebelle Reserve in Abitibi County has an area of 100 sq. miles, the Baie Comeau and Chicoutimi Reserves in the Lake St. John area, 480 and 678 sq. miles, respectively, and the Kipawa Reserve in Témiscamingue County, 3,090 sq. miles. Adjoining Gaspésian Park are the Chic-Chocs and Matane Reserves with areas of 325 sq. miles and 500 sq. miles, and in Rimouski County is the Horton Reserve with an area of 310 sq. miles; this is the only reserve operated for hunting as well as for fishing.

These parks and reserves are wilderness areas of great scenic interest and are for the most part mountainous country threaded with many rivers, lakes and streams and abounding in wildlife. In all of them, except Mont Orford Park and Oka Park, excellent fishing may be found and most of them have been organized to accommodate sportsmen and tourists in camps, cottages and lodges. Mont Tremblant Park, located close to a famous year-round recreational area, is easily reached in summer by highway from Montreal and is very popular for tent or trailer camping and for swimming and picnicking. Mont Orford has an 18-hole golf course and, in winter, is the rendezvous of Canadian and United States skiers and the site of the Canadian Alpine downhill and slalom championship competitions. Hunting is forbidden in all parks and reserves except Horton, Kipawa and James Bay. In recent years, controlled moose hunting in Laurentide, La Vérendrye and Matane Parks has been allowed to remove the surplus population.

Salmon fishing is available in the Gaspé area where the government maintains facilities for anglers along the Port Daniel, St. Jean, Cap-Chat, Matane, Matapédia and Petite Cascapédia Rivers. Facilities are also provided along the estuary of the Moisie River on the north shore of the St. Lawrence River about 15 miles east of Sept Îles, as well as at Petit Saguenay and Laval.

The ever-increasing popularity of camping in Quebec has prompted the Department's Park Service to establish camping facilities. Twenty areas are now well organized for this purpose—Val Jalbert, one mile east of Roberval in Lake St. John County; Grand Métis, six miles from Mont Joli, and Cap Bon Ami, both in the Gaspé Peninsula; Batiscan, on Highway 2, 25 miles east of Trois-Rivières; St. Jean, Île d'Orléans, Stoneham, Ville-neuve and Beaumont in the vicinity of Quebec City; des Voltigeurs, Waterloo and Mont Orford in the Eastern Townships; Brossard, Laprairie, Côte Ste. Catherine, Pointe-aux-Cascades and Oka close to Montreal; and Soulanges, St. Zotique and Rivière-Beaudette near Valleyfield.

Ontario.—The development of provincial parklands in Ontario continues at a rapid rate. In 1954 there were only eight provincial parks in the province while today there are 96 such parks available for public use. In addition, several new parks are in process of development and 56 other areas encompassing almost 748 sq. miles are reserved for future development. The total area in the Ontario Provincial Park system is about 5,909 sq. miles.

The four largest provincial parks—Algonquin, Quetico, Lake Superior and Sibley—together have an area of about 5,200 sq. miles. Algonquin Park, the largest in the system, is a beautiful area 2,910 sq. miles in extent, 180 miles north of Toronto and 105 miles west of Ottawa; it has 14 picnic and camp grounds which are accessible by car from Highway 60 and offers particularly fine canoeing opportunities within its interior. Quetico Park, covering 1,750 sq. miles, is accessible by Highway 11 at the Dawson Trail Campground on French Lake and also by water via Basswood Lake in the south. Highway 17 north from Sault Ste. Marie provides access to Lake Superior Park, and Sibley Park may be reached by road from Highway 17 east from Port Arthur.

In 1966 a new policy of park classification and park land zoning was announced to achieve a balanced park system and to establish a policy framework for positive and effective development and management. Five park classes were established—primitive, natural environment or heritage, wild river, nature reserve, and recreation. Comparable zones within parks were also established—primitive, natural, historic, multiple use, and recreation.

Under the Wilderness Areas Act, which came into effect in 1959, 42 areas have been established. These areas, widely distributed across the province, vary in size, character and significance but all are regarded as important for their historic, scientific, aesthetic or cultural values. The largest is a 938-sq. mile block covering the Pukaskwa area on the north shore of Lake Superior and the second largest is a 225-sq. mile area of treeless tundra in the northeastern tip of the province at the point where Cape Henrietta-Maria juts out into Hudson Bay; this area is the most southern arctic tundra in the world and its primitive unspoiled landscapes and characteristically arctic wildlife are being preserved for scientific study and as unique features of the province. All other wilderness areas are one square mile or less in size.

Ontario has made another advance in meeting the rising pressures for recreational space by applying the concept of the recreational reserve. The recently created North Georgian Bay Recreational Reserve covers 4,500 sq. miles of interesting country lying generally between Algoma and Parry Sound on the north shore of Georgian Bay and including the channel between Manitoulin Island and the mainland, the 30,000 Islands, the famous route of the voyageurs via the French River, the remaining shoreline of Lake Nipissing and the LaCloche Mountains. The Reserve is not a National Park nor is it a Wilderness Area but an area following a normal course of development which is already used extensively for recreation. The plan is, by guiding the evolution of the area, to realize its full potential as a recreational paradise serving all types of needs and co-existing with a landscape of normal activity.

Ontario's vast lakeland areas make this province a vacation paradise and the number of park visitors increases year by year. Attendance in 1966 was 9,791,671 persons and campers numbered 994,787. Charges for vehicle entry are \$1 a day or \$5 a year and camping charges are \$1.50 a night or \$9 a week. At supervised tent and trailer campsites, picnic tables, fireplaces, tested drinking water and washrooms are provided. New campsites are being added at the rate of 500 to 1,000 a year and in 1966 numbered approximately 17,000.

Interpretative and naturalist programs are being continually expanded and such services as museums, outdoor exhibits, conducted trips, illustrated talks and labelled nature trails were available in 25 parks in 1966.

The parklands of Ontario are administered by the Parks Branch of the Department of Lands and Forests. Detailed information is contained in various booklets and maps available on request from the Department of Lands and Forests, Parliament Buildings, Toronto.

Manitoba.—The provincial park system of Manitoba, administered by the Parks Branch of the Department of Mines and Natural Resources, consists of four major classifications of outdoor recreational development: *provincial parks*, which are large-area parks with a variety of natural attractions suited to many outdoor activities; *recreational areas*, the natural attractions of which are modified to accommodate recreational activities of an intensive nature; *waysides*, or highway parks which enhance travel routes and provide attractive rest stops; and *heritage areas*, which are areas of outstanding scenic beauty or have natural and physical features of special provincial interest.

Manitoba's Centennial \$5,000,000 parks program includes the development of three new provincial parks, the rehabilitation and expansion of existing recreational areas with a view to providing new camping and improved day-use facilities, and the development of the heritage area program to preserve and interpret sites, large and small, illustrating the natural and human history of the province; Bird's Hill Provincial Park, 14 miles east of Winnipeg, was officially opened July 15, 1967. A survey has been conducted to establish a development policy for waysides and a study of the shoreline potentials along Lake Winnipeg and Lake Manitoba will provide guidance for the future development of the interlake area.

At present Manitoba has nine provincial parks with a total area of 2,854 sq. miles, of which area 1,945 sq. miles are within provincial forests. In addition, there are 40 recreational areas ranging in size from 2.5 acres to 2,000 acres, and many picnic sites, campgrounds and trailer parks. Hunting and fishing lodges are common and accommodation in some of the parks runs the gamut of modern resorts and motels, hotels and cabins. Golf, tennis, swimming and boating facilities are available, as well as children's playgrounds. About 115 commercial concessions operate within the park system giving a variety of services ranging from restaurants to riding stables and boat marinas. The number of park visitors continues to increase impressively each year. In the year ended Mar. 31, 1966 they totalled an estimated 1,570,000 and camping groups accommodated in tents, trailers or truck campers numbered about 36,000. Admission fees to provincial parks are 50 cents per car per day or \$3 per season.

Saskatchewan.—Saskatchewan has 14 provincial parks with a total area of 1,803 sq. miles. Cypress Hills, Duck Mountain, Greenwater Lake and Moose Mountain are operated as summer resorts with chalet, lodge, cabin and trailer accommodation as well as camp and picnic facilities. The other parks have trailer sites and camping, picnicking, boating and swimming facilities. Recreational activities include fishing, boating, swimming, golf, tennis, dancing, baseball, hiking, nature study, horseback riding, etc., and the parks are all well fitted with playground and beach equipment for children. In Cypress Hills Park, elk, antelope, deer, sharp-tailed grouse and beaver are present, and the streams have been stocked with brook and other trout. Heavy stands of tall, straight lodgepole pine and white spruce provide a unique forest cover in this area. In Duck Mountain, Moose Mountain and Greenwater Lake Parks, moose, elk and bear appear variously, and deer and beaver are common to all, as well as several varieties of grouse and many species of water and smaller land birds. Spruce, poplar and white birch provide excellent cover for wildlife. Pickerel, pike and perch are prevalent in most of the lakes. Lake trout are ardently sought by fishermen in the northern lakes. Three wilderness parks—La Ronge, Nipawin and Meadow Lake—offer wilderness-style canoe routes and 'fly-in' commercially operated fishing and hunting camps. Many roadside picnic grounds are located throughout the province and several excellent Trans-Canada Highway campsites are in use.

Sites of historic interest are marked throughout the province and include the Touchwood Hills Hudson's Bay Post, Cannington Manor Historic Park and Wood Mountain Historic Park, all of which have picnic facilities.

Alberta.—In Alberta, 47 provincial parks have been established, 44 of which, with a total area of approximately 170 sq. miles, are in use and continuing development. Cypress Hills Provincial Park with an area of 78 sq. miles is the largest and is situated in the south-east portion of the province. Other parks are: Aspen Beach, Beauvais Lake, Big Hill Springs, Big Knife, Bow Valley, Bragg Creek, Crimson Lake, Cross Lake, Dillberry Lake, Dinosaur, Entrance, Garner Lake, Gooseberry Lake, Hommy, Jarvis Bay, Kinbrook Island, Lac Cardinal, Little Bow, Little Fish Lake, Long Lake, Ma-Me-O Beach, Miquelon Lake, Moonshine Lake, O'Brien, Park Lake, Pembina River, Red Lodge, Rochon Sands, Saskatoon Island, Sir Winston Churchill, Taber, Thunder Lake, The Vermilion, Tillebrook Trans-Canada Campsite, Wabamun Lake, Williamson, Willow Creek, Winagami Lake, Woolford, Writing-on-Stone, Lesser Slave Lake, Moose Lake and Pigeon Lake. These parks are generally provided with picnic, camping and playground facilities and are maintained by the Department of Lands and Forests primarily for the recreation and enjoyment of the residents of the province. There is a park within easy reach of almost every town. The most northerly park is Lac Cardinal, about 28 miles southwest of Peace River, and the southernmost park is Writing-on-Stone which adjoins the Alberta-Montana border. Alberta's provincial parks were visited by 3,575,139 tourists and vacationists in 1966.

In addition to the recreational parks, 24 sites have been established to mark and preserve locations of historic interest. They include: Athabasca Landing, Buckingham House, Bugnet Plantation, Coronation Boundary Marker, Early Man Site, Fort DeL'Isle, Fort George, Fort Vermilion, Fort Victoria, Fort White Earth, Frog Lake Massacre, Hay Lakes Telegraph Station, Massacre Butte, Ribstones, Rocky Mountain House Fort, Standoff, Stephansson, Twelve Foot Davis, Shaw Woolen Mill, Rev. George McDougall's Death Site, Fort McLeod, Indian Stone Pile, St. Joseph Industrial School and Old Women's Buffalo Jump.

Provided also for Albertans are the Wilderness Provincial Park, which adjoins Jasper National Park in the north and extends along the British Columbia border, and three wilderness areas established under the Forest Reserves Act in 1961. Willmore Wilderness Provincial Park has an area of 2,149 sq. miles, Siffleur Wilderness 159 sq. miles, White Goat Wilderness 489 sq. miles and Ghost River Wilderness 59 sq. miles. The wilderness areas have been set aside to preserve as far as possible the natural scene and are not subject to any development or provided with roads.

British Columbia.—There are 250 (170 developed) provincial parks in British Columbia, having a total area of about 10,018 sq. miles. These parks are classified as A, B and C. Class A parks are intended to preserve outstanding natural, scenic and historic features of the province for public recreation; they have a high degree of legislative protection against exploitation and alienation. Class B parks are also primarily for the protection of natural attractions but other resource use may be permitted if it does not unduly impair recreational values. Class C parks are intended primarily for the use of local residents and are generally managed by local park boards. Nature Conservancy Areas in any park are fully protected from resource development and are dedicated to a variety of recreational uses. There are immense wilderness areas such as Tweedsmuir Park and Wells Gray Park and outstanding scenic and mountain reserves such as Garibaldi, Mount Robson, Manning and Bowron Lakes Parks. The formal gardens of Peace Arch Park are a monument to the goodwill between Canada and the United States. Vancouver Island has a chain of small forested parks that have achieved tremendous popularity with tourists; the best known are Little Qualicum Falls, Miracle Beach and Goldstream. The famous gold town of Barkerville has been restored and became the first Provincial Historic Park; Fort Steele in the East Kootenay area is also being restored to preserve another of

British Columbia's pioneer settlements. Ten marine parks with mooring facilities and campsites have been developed on the islands of the Strait of Georgia for the benefit of water-borne vacationers.

The popularity of British Columbia's parks, with their integrated campsites and picnic areas, is attested by the fact that about 5,150,000 park visits were recorded during 1966; about 25 p.c. of the visitors were campers and the remainder day visitors. Records show that Mount Seymour, Cultus Lake and Garibaldi Parks were the most heavily used.

Subsection 3.—Ottawa, Canada's National Capital*

Canada's capital city lies in a magnificent natural setting, its hub high on the limestone bluffs bordering the Ottawa River where it tumbles over the Chaudière Falls and where, a short distance downstream, the lazy Rideau River falls in twin curtains over the cliffs from the south and the once-turbulent Gatineau River flows in from the north. Here Champlain paused and portaged on his way westward in 1613. The priests, soldiers and traders who followed him travelled past these cliffs and around the rapids. By this place passed most of the great overland explorers. Champlain called the river "*la grande rivière des Algommequins*" and early English traders called it the Grand River. "Ottawa" is the anglicized form of Outaouac or Outaouais, the name of a tribe of Indians from Lake Huron who traded with the French in the seventeenth century. They carried their furs by the river that now bears their name. The first settlement in this region is associated with an American from Massachusetts, Philemon Wright, who, in 1800, located on the north shore of the river where Hull stands today, bringing with him families and tradesmen and forming the nucleus of a busy community. Taking advantage of Britain's needs for squared timber, Philemon Wright ran the first raft of white pine to Quebec in 1806, and started the Ottawa River squared timber trade that soon came to be fostered by British tariff concessions. This was the beginning of a great industry that remained the life blood of the community for half a century.

Settlement on the south side of the river did not begin in earnest until a generation later. During the War of 1812 communications by the St. Lawrence River, the main route to the settled area in Upper Canada, had been under American attack and a safer water route between Montreal and the Great Lakes was considered an urgent need for the future. Ten years were spent in sporadic investigation and consideration of a route by the Rideau and Cataragui River systems and finally, in 1826, Lieutenant-Colonel John By of the Royal Engineers was sent to the Chaudière to build a canal from that point to Kingston. The next year two companies of Royal Sappers and Miners, numbering 162 men, began the construction. To Colonel By also goes the credit of planning the original townsite which was, in 1827, named Bytown in his honour. Where Ottawa's central area is today, the Earl of Dalhousie, the then Governor-in-Chief, had wisely secured commanding ground for the Crown in 1823 and, adjacent to this, Colonel By laid out two settlements called Upper Town and Lower Town, separated by part of the Government lands called Barrack Hill. The canal was finished in 1832 and the town that sprouted around Colonel By's military camp began to grow and prosper. Stores and banks were set up, churches and schools were built and a little manufacturing community was started in New Edinburgh near Rideau Falls.

Bytown was now the inland centre of the squared timber trade and by 1850 could boast of some fine stone buildings, among them the home of Thomas MacKay which today forms the central part of the residence of the Governor General of Canada. A change then occurred in the timber industry, the British system of preferential import duties on squared white and red pine logs was abandoned and trade began to decline. However, by this time the accessible forest stands of the eastern United States were depleted and sawn lumber was needed to house a growing population. Also, the American railway and canal network had extended to the Canadian border, making transportation easy. Encouraged

* Revised by the Information and Historical Division, National Capital Commission, Ottawa.

by these favourable conditions and the newly recognized availability of hydro-electric power, a group of American and other lumbermen came to Bytown, beginning in 1853, and established sawmills by the Chaudière Falls. Soon the islands about the falls and the flats on both shores were covered with lumber piles and loaded barges were on their way to the American market. The sawmill industry began its rise to dominating importance.

At the beginning of 1855, Bytown became a city and took the name Ottawa, just in time to receive a great honour and to assume a great responsibility. The United Province of Canada, since its formation in 1841, had shuttled its capital between Kingston, Toronto, Montreal and Quebec and was now trying to agree on a permanent site. At the end of 1857 Queen Victoria settled the dispute by choosing Ottawa. Government buildings for the new capital were designed and contracts were let in 1859 for their construction. However, the task was hard and the cost much greater than expected and it was not until 1866 that the government of the Province of Canada actually moved to Ottawa. The next year the first Parliament of the new Dominion of Canada met in an incomplete Parliament Building, situated on the former Barrack Hill.

The nation enjoyed a brief prosperity during most of the next decade. Ottawa grew and the government expanded as the Dominion extended its authority over more and more of British North America. In 1871, shortly after Confederation, the city had a population of about 22,000. Many fine homes and stores in stone and brick were built. The Departmental Buildings, flanking the Parliament Building on the Hill, were enlarged. An old wooden City Hall near the Canal was replaced in 1876 by a fine stone building and a large post office was erected at the city's centre. By the end of the nineteenth century, Ottawa was a flourishing industrial centre with a population of 59,000. It remained the hub of the lumbering industry of Eastern Canada, had the largest paper mills in the country and the leading match factory in the world. However, little effort had been made to preserve or enhance its natural beauty until the Ottawa Improvement Commission was set up in 1899 and the Driveway along the Rideau Canal was begun. Even so, progress was slow in this direction but in the years up to the beginning of the First World War the city centre began to take on a new face. Many new government buildings were erected—laboratories, the Dominion Observatory and the Geodetic Building at the Experimental Farm, the Archives Building, the Victoria Memorial Museum, the Royal Canadian Mint and the Connaught Building. In 1912, the Grand Trunk Railway completed construction of the Union Station and of the French renaissance-style Chateau Laurier whose turrets continue to grace the Ottawa skyline. During this period several studies were made and plans recommended for the improvement of the National Capital but these were deferred because of the War and for other reasons. Fire destroyed the Parliament Building in 1916, leaving standing only the octagonal library now forming part of the magnificent building of modern Gothic architecture which replaced it but was ten years in the building. The city beautification program was continued by the Ottawa Improvement Commission on a slightly increased budget until 1927; in that year the Commission was reconstituted as the Federal District Commission and the program then proceeded at a more accelerated rate. The second Commission was succeeded in 1959 by the National Capital Commission.

The City of Ottawa today, with its population of close to 300,000, is well on the way to becoming a national capital of enduring beauty and grace. It is a self-governing municipality, administered by an elected City Council, but there are underlying differences which set it apart from all other major Canadian centres. Historically, it has always been the meeting place for the two founding peoples. It is the national Seat of Government and throughout the years the federal authorities have recognized the need of creating in and around the National Capital an area of pride, not only for the residents of the city and its environs but for all Canadians.

Much of the work of the National Capital Commission hinges on the implementation of a long-range Master Plan, developed by the late Jacques Gréber, a famed French town-planner. The Gréber Plan tabled in the House of Commons in 1951, although not

officially recognized by the Provinces of Quebec and Ontario, is the basis of much that has been accomplished. In fact, ten years after its publication it was reported that all of its major proposals were in process of realization.

Success of the Plan, now and in the future, is dependent on co-operation between the Federal Government, the governments of the Provinces of Ontario and Quebec, the cities of Ottawa, Hull and Eastview and about sixty-five other autonomous municipalities in the National Capital Region. The Plan itself was conceived as a memorial to all Canadians who gave their lives in the defence of Canada during the Second World War and was projected over a fifty-year period. It called first for the establishment of a National Capital Region encompassing some 900 sq. miles but later, in 1959, this was doubled to 1,800 sq. miles—about half in Ontario and half in Quebec. In accordance with its proposals, large "open spaces" are being provided in the Ottawa-Hull area, part of which involves the restoration of the shores of the waterways. Major restorations have taken place at Rideau Falls opposite the Ottawa City Hall, at Jacques Cartier Park in Hull, and at Vincent Massey Park which is a 75-acre urban park in the heart of Ottawa, linked with the 50-acre Hog's Back Park surrounding the limestone chasm of Prince of Wales Falls on the Rideau River. Forty miles of riverfront land are under the control of the Commission and countless delightful areas are accessible to the public. There are some 60 miles of wide, landscaped driveways throughout Ottawa which will be extended by another 20 miles in coming years. In addition the Commission maintains seven city-owned parks in Ottawa, including Rockcliffe and Strathcona Parks. At present Ottawa has 4,000 acres of open space.

The relocation of government buildings to suitable scattered sites has been under way for several years. The first development took place at Tunney's Pasture located on the Ottawa River in the west-central area of Ottawa. The Pasture now contains 18 buildings of various sizes. Confederation Heights, in the south-central area adjoining Hog's Back Park, now contains six attractive and functional buildings that house Government Departments, and the large Government Printing Bureau was established in Hull. In all, the grounds of more than 140 government buildings are cared for by the Commission.

Two key proposals in the Master Plan with long-range effects on Ottawa's future are the creation of the Greenbelt and the removal of railway trackage from the central sections. The Greenbelt, designed to control urban sprawl and to provide sites for governmental, industrial and research development, is a unique planning measure in North America. Within its 41,500 acres the Commission encourages agriculture, reforestation and public recreation areas.

Railway relocation, possibly the most important element of the National Capital Plan, has been largely completed. It involved removal of 32 miles of track, much of it in the central sections of the city, elimination of 72 level crossings, many in high density urbanized areas, and is a prime consideration in Federal Government redevelopment of LeBreton Flats, the old Union Station sector in downtown Ottawa which has been redeveloped for the Centennial celebrations, and sections of Sussex Drive near the approaches of the new Macdonald-Cartier Bridge across the Ottawa River.

The National Capital Commission opened two beautiful new parkways in Ottawa in time for the Centennial of Confederation—Colonel By Drive, extending over 4.6 miles from Hog's Back to Rideau Street, and the Ottawa River Parkway, an eight-mile drive with sweeping curves from about Britannia to Wellington Street near the Garden of the Provinces.

North of Ottawa and Hull, in Quebec, a 68,000-acre recreation area known as Gatineau Park has been developed by the Commission, an area that will eventually be extended to 88,000 acres. It is a wilderness area, extending northward from Hull for 35 miles. With 25 miles of parkway, magnificent lookouts, lakes, fishing streams, beaches, picnic areas, camping sites and walking trails, the park is one of the finest recreation areas in Canada, enjoyed by tens of thousands of visitors yearly.

In addition to its own programs, the National Capital Commission extends planning aid and advice to municipalities in the National Capital Region but only on request; at no time does the Commission seek to impose its proposals on the autonomous governments concerned with local affairs in the region. Financial aid in the form of grants is made to municipal governments in special circumstances.

The Commission has 20 members, representing all the provinces, and employs between 600 and 800 people, depending on season, in carrying out its development and maintenance programs. It reports to Parliament through the Minister of Public Works.

Section 2.—Wildlife Resources and Conservation

Wildlife in Canada is an important renewable natural resource. In the early days wildlife was, and in remote areas still is, a form of sustenance in the hinterland, and trade in fur determined the course of exploration and settlement. During the period of the opening up of the country, a number of mammals and birds became seriously depleted or extinct. The passenger pigeon, the great auk and the Labrador duck became extinct, the buffalo vanished from the prairies, and elk, prong-horn antelope, and muskoxen were reduced to small fractions of their former numbers. Wildlife habitat has been reduced by the cutting and burning of the forests, the pollution of streams, industrial and urban development, drainage of wetlands, building of dams, and other changes in the land.

Wildlife has been changed and influenced by man to the degree that he has changed and influenced the environment for wildlife. The arctic and alpine tundra, one of Canada's major vegetational regions, has been changed hardly at all; the adjacent subarctic and subalpine non-commercial forests have been changed principally as a result of increased human travel causing more forest fires; the great forest farther south has not lost its real character through being managed for commercial use; cultivable lands, whether originally forest or grassland, have completely changed but often they and the managed forest are better for some forms of wildlife than the original wilderness. There are more moose, deer, ruffed grouse and probably more coyotes than in Indian days. Fur species, such as beaver and muskrat, are easily managed and many small mammals and birds thrive better in fields and woodlots than in the virgin forests, provided that they are not poisoned by pesticides. At the present time, the harvestable surplus of game and fur species across Canada is seldom fully utilized and it is quite clear that wildlife will remain abundant wherever there is suitable habitat and enlightened management.

Thus, Canada today is known throughout the world for the wealth and variety of its wildlife. It maintains most or all the existing stocks of woodland caribou, mountain sheep, wolves, grizzly bears and wolverines, to mention a few. And these animals exist not only because of the vastness of their habitat but also because of man's efforts to preserve them. There is evidence of concern about the preservation of wildlife by the early Canadians; there were game laws in force in the original provinces when all but a few thousand acres of land were still the patrimony of the Indians. In 1885 pioneer conservationists were instrumental in establishing Banff Park in Alberta, and in 1887 a bird sanctuary, the first on the Continent, was established at Last Mountain Lake in Saskatchewan. Concern to preserve Canada's wildlife heritage led to the complete protection of wood bison in 1893 and to the purchase and establishment of a nucleus herd of plains bison at Wainwright in Alberta in 1907. Thus was formed the basis of wildlife conservation efforts, which, for a long time, took the form of protection of certain species from destruction by man or predator. Better knowledge of nature's operations and recognition that many factors combine to cause fluctuation in wildlife numbers are now being reflected in scientifically based hunting seasons and limits. The science of animal numbers is new and sometimes runs counter to popular prejudice but it is well understood that any area will support only so many animals, and species that are highly productive must have a quick turnover. Consideration of wildlife must never be separated from consideration of its environment and

if the environment is fully stocked the annual increment need only replace the losses. All extra is surplus, only part of which is taken by predators and part, if the animal is a game species, by man.

As a natural resource, wildlife within the provinces comes under the jurisdiction of the respective provincial governments.* Wildlife on federal lands and certain problems of national or international interest with respect to research and management are the concern of the Federal Government and are dealt with mainly by the Canadian Wildlife Service as described under the next heading. Following this is a special article describing the variety of animal life in Canada today, prepared by scientists of the National Museum of Canada.

The Canadian Wildlife Service.—The Canadian Wildlife Service deals with most wildlife problems coming within the jurisdiction of the Federal Government. It was organized in 1947 to meet the growing need for scientific research in wildlife management and is now a Branch of the Department of Indian Affairs and Northern Development. The Service conducts scientific research into wildlife problems in the Northwest Territories, Yukon Territory and the National Parks, advises the administrative agencies concerned on wildlife management and co-operates in the application of such advice. It administers the Migratory Birds Convention Act, provides co-ordination and advice in connection with the administration of the Game Export Act in the provinces, deals with national and international problems relating to wildlife resources and co-operates with other agencies having similar interests and problems in Canada and elsewhere.

The Migratory Birds Convention Act was passed in 1917 to give effect to the Migratory Birds Treaty signed at Washington in 1916. The Canadian Wildlife Service is responsible for recommending the annual revision of the Migratory Birds Regulations, which govern open seasons, bag limits and hunting practices for migratory game birds. The Act and Regulations are enforced by the Royal Canadian Mounted Police and, in both administration and enforcement, co-operation is received from provincial authorities. There are 93 migratory bird sanctuaries in Canada, having a total area of 44,941.6 sq. miles. Bird banding provides valuable information on the migration of birds and their natural history and is especially useful in waterfowl management. Serially numbered bands supplied by the United States Bureau of Sport Fisheries and Wildlife are used in Canada as well as in the United States.

A national wildlife policy and program was tabled in the House of Commons in 1966 after comprehensive discussions with the provinces and citizens' conservation organizations. This policy provides for co-operative research and management with the provinces on common problems and establishes guidelines and goals for federal research programs.

The serious decline in the numbers of barren-ground caribou revealed in surveys of 1948-49 and 1955-56 continues to cause grave concern. In 1965 the herds numbered about 250,000 animals. Excessive human kill, the destruction of winter range by forest fires, and poor calf survival during years of bad weather are the major causes of the decline. In April 1966 the Service began an intensive two-year study of herds in Keewatin and northern Manitoba to provide data for management. Studies of wolf-caribou relationships and of the arctic fox were completed in 1966. Studies were continued on mink, muskrat, beaver, and polar and grizzly bear. Big game mammals in the National Parks were the object of continued study, special attention being given to mountain sheep and elk in the Mountain Parks. In Wood Buffalo National Park, investigations into the problems of disease and low reproductive rates among bison were continued. Studies of the relationship between forests and wildlife were continued in New Brunswick.

The loss of wetlands to drainage and filling for agricultural and other purposes poses a serious threat to the waterfowl resource. The Service is participating with the provinces

* The conservation of wild fur-bearing animals in the different provinces is discussed in the Fisheries and Furs Chapter, Part II, and information on provincial conservation of fisheries resources is given in Part I of the same Chapter, together with data relating to the work of the Fisheries Research Board of Canada and to international fisheries conservation (see Index).

in a major program of preserving wetlands by purchase and long-term lease. In 1967, after completion of pilot studies, a program to preserve about 4,000,000 acres of wetlands at an annual cost of over \$5,000,000 was begun.

Much time was devoted to species greatly reduced in number or in danger of extinction, such as the trumpeter swan and whooping crane. Six eggs of the latter species were taken from Wood Buffalo National Park to provide the nucleus of a captive breeding population. Five of the eggs were hatched successfully. The progeny will be released into the wild as soon as a large enough supply of breeding birds has been developed. A country-wide harvest survey will be made possible by the Canada Migratory Game Bird Hunting Permit, sold for the first time in 1966. About 385,000 waterfowl hunters purchased permits. A second survey will ascertain the species and age composition of the harvest. Other continuing programs include an annual survey of crop damage in the Prairie Provinces, Arctic bird banding and participation in a program to reduce bird hazards at airports. Substitutes for lead shot are being studied in order to eliminate the large annual loss of waterfowl from lead poisoning. Pesticide research, just now developing, aims at measuring effects on wild animals of the environmental contamination by toxic chemicals; populations of songbirds, gulls and falcons are currently under study. Subjects of research in limnology include productivity of National Park waters and the biology of fish and associated fauna. Adequate stocks of game fish are provided and maintained through modern methods of management where they can be applied without detriment to the aesthetic values of the areas concerned.

The Service's research staff totals about 70. Specialists covering mammalogy, limnology, migratory bird populations, migratory bird habitat, ARDA, pesticides, pathology and biometrics are stationed at the head office in Ottawa. Offices are located in Fort Smith and Inuvik, N.W.T.; Whitehorse, Y.T.; Vancouver, B.C.; Edmonton and Calgary, Alta.; Saskatoon, Sask.; Winnipeg, Man.; Ottawa and Aurora, Ont.; Quebec City, Que.; Fredericton and Sackville, N.B.; Halifax, N.S.; and St. John's, Nfld. Headquarters for the Western Region is in Edmonton and for the Eastern Region in Ottawa. Sixteen officers are engaged in an inventory of wildlife land capability under the ARDA program (see Chapter X). A number of university graduates and undergraduates are engaged annually to assist in summer field work and 16 scholarships of \$1,200 each were awarded in 1967 to graduate students in wildlife and allied fields.

ANIMAL LIFE IN CANADA TODAY*

Introduction

The animals of Canada range over some 3,852,000 square miles of territory that, with Alaska, makes up the northern part of the North American Continent. Except in some southern coastal areas, the climate of the region consists of long severe winters and short warm summers. Consequently, the animal life is relatively sparse (compared to the tropics) and consists mainly of widely eurytopic species, able to survive and propagate under extreme physical conditions.

Of Canada's estimated 100,000 different kinds of animals, only 1,500 species are vertebrates (animals with backbones); all others are invertebrates. In other words, of every 100 kinds of animals occurring in a given part of Canada, only one or two are likely to be a mammal, bird, reptile, amphibian, or fish. The overwhelming majority of species will be animals without backbones such as insects, spiders, crustaceans, worms, molluscs, jellyfish, sponges, and single-celled animals. The vertebrates, because of their large size and living habits, are much more conspicuous and familiar to us, and occupy a more important place in our concept of nature than is merited on the basis of numbers alone.

* Prepared by scientists of the Zoology Division, National Museum of Canada as follows: Introduction, E. L. Bousfield, Chief Zoologist; The Mammals of Canada, P. M. Youngman, Curator of Mammals; The Birds of Canada, W. Earl Godfrey, Curator of Birds; Amphibians and Reptiles in Canada, Francis R. Cook, Curator of Herpetology; Canada's Fish Fauna, D. E. McAllister, Curator of Fishes; The Arthropods of Canada, E. L. Bousfield; The Mollusca of Canada, A. H. Clarke, Jr., Curator of Molluscs; and Canadian Marine Invertebrate Life, N. A. Powell, Curator of Invertebrates, and E. L. Bousfield.

Animals are sometimes regarded as motile, chemically complex, self-perpetuating entities that, in many different fashions, convert food protein of one type into food protein of another. Unlike plants, animals are not able to synthesize their own body proteins from basic molecules, energized by sunlight. The primary animal feeding types, or food converters, are herbivorous and feed essentially on plant material. These in turn are eaten by carnivores which may also prey on each other. Some animals, particularly among the vertebrates (including man), are omnivorous and are able to utilize, to some degree, both plant and animal protein. Many groups of invertebrates, because of their small size, are essentially herbivorous. On the other hand, virtually all vertebrate species feed on animal protein at one stage or another of their life history but some (especially in the adult stage), such as the ungulate mammals, tortoises, and many birds, have become secondarily adapted to feeding on plant material. For animal protein, man feeds primarily on other vertebrates or their products and, in modern times, derives only a small proportion of his sustenance from invertebrates (shellfish, shrimps) or their products (honey).

Although some invertebrate animals are obviously man's benefactors (bees, silkmoths, earthworms), the group as a whole causes man his greatest physical discomfort, financial loss, disease, and even death. Canadians are universally aware of damage caused by insects and other arthropods that destroy man's crops, riddle his clothing and household furnishings, parasitize his domestic animals, bite and sting his hide and infect his body with disease, undermine his buildings and generally contribute to life's problems. Canadians may be less aware of the expensive measures required to repair damage by other invertebrates, particularly in the marine environment. Shipworms and gribbles reduce wharves and pilings to damp sawdust; barnacles, mussels, sea mosses and hydroids foul the bottoms of boats and clog water conduits; and swarms of sea lice and amphipod crustaceans strip the bait from fishing lines and lobster pots and even eat the defenceless lobsters in their crowded holding trays. Thus, if man did not realize the inestimable value of invertebrates in the pollination of plants and in the food cycle of nature, a cycle necessary to his own existence, he might very well be tempted to put the invertebrates on the negative side of the balance sheet!

Canadians tend to be more familiar with the terrestrial fauna than with the animals of fresh and salt water. Thus, among the vertebrates, the aquatic fish are least familiar to us and, among the invertebrates, the aquatic crustaceans are less well known than the essentially terrestrial insects and spiders. Except for arthropods and molluscs, few invertebrate groups are significantly terrestrial, the earthworms (about 25 Canadian species, mostly introduced) being a notable exception. Their close cousins, the microdriles (about 60 Canadian species), and their more distant cousins, the leeches (about 40 Canadian species), occur mainly in fresh water but a few are marine. The flat worms (Platyhelminthes) have free-living members in fresh and salt water; the flukes and tapeworms are parasitic in higher animals and have a complicated life history involving two or more hosts, one of which is usually aquatic.

Taxonomically, the vertebrate animals of Canada are fairly well known. Even among the fishes, the likelihood of a species new to science being found in the region is slim. The invertebrates, on the other hand, are much less well known. In some groups, such as the ubiquitous minute worm-like nematodes, fewer than 1,000 Canadian species are known, probably representing only 10 p.c. of the total fauna. In certain parasitic worm-like animal groups (Acanthocephala, Nematomorpha) and some free-living aquatic groups (Echiura, Tardigrada) only a few Canadian species are known. Even in relatively well-studied micro-organisms of fresh water, such as the Rotifera ('wheel-bearing' animalcules) and their relatives (more than 1,000 Canadian species), much is yet to be learned. Particularly rewarding fields of systematic research await students of the microscopic interstitial animals of the soil and sea bottom, and of the macro-invertebrates of the Pacific Coast of Canada.

The Mammals of Canada

Mammals are the most successful and intelligent of the land vertebrates. They are warm blooded, have a four-chambered heart, possess hair at some stage of development, and suckle their young after birth. They evolved from a mammal-like reptile stock in the Triassic. Living mammals are members of three major evolutionary lines, the monotremes (Echidna and Duckbilled Platypus of Australia); the marsupials (the Opossum and numerous Australian forms); and the placentals (all other living orders of mammals).

Since the end of the Mesozoic, mammals have increased rapidly in numbers and diversity. Even within the three major areas of habitation, terrestrial, aquatic and aerial, there has been much specialization. Various terrestrial mammals have developed many modifications for running, leaping, burrowing and arboreal locomotion. Aquatic mammals have developed modifications for various stages of life in the water from amphibious types such as water shrews and otters to strictly aquatic mammals such as the whales and sea cows. A number of arboreal mammals have developed gliding membranes, between fore and hind limbs, to assist in leaping through the air. True flight has been developed only by the bats.

Canada harbours about 193 species of mammals varying in size from the giant Blue Whale (*Balaenoptera musculus*) to the minute Pigmy Shrew (*Microsorex hoyi*). The kinds of mammals differ greatly from tundra to boreal forest, prairies, and eastern deciduous forest. The greatest density of species occurs in the western mountains and the least density in the high Arctic.

Since Canada was almost entirely covered by glaciers only a few thousand years ago, the terrestrial mammal fauna is a reflection of the movement of various species from northern and southern unglaciated refugia back into the deglaciated area. Some South American species, such as the Opossum (*Didelphis marsupialis*) and the Porcupine (*Erethizon dorsatum*), have pushed north into Canada, but the greatest number of species were derived from North America and Asia.

Terrestrial species occurring both in Canada and the Old World include Arctic Hare (*Lepus timidus*), Least Chipmunk (*Eutamias minimus*), Beaver (*Castor fiber*), Arctic Ground Squirrel (*Spermophilus undulatus*), Northern Red-backed Mouse (*Clethrionomys rutilus*), Northern Vole (*Microtus oeconomus*), Singing Vole (*Microtus gregalis*), Siberian Lemming (*Lemmus sibiricus*), Arctic Fox (*Vulpes lagopus*), Red Fox (*Vulpes vulpes*), Brown Bear (*Ursus arctos*), Polar Bear (*Ursus maritimus*), Ermine (*Mustela erminea*), Least Weasel (*Mustela nivalis*), Wolverine (*Gulo gulo*), Wapiti (*Cervus elaphus*), Moose (*Alces alces*) and Caribou (*Rangifer tarandus*). Numerous other species have close relatives in the Old World.

Examples of species with broad ranges in Canada are Masked Shrew (*Sorex cinereus*), Water Shrew (*Sorex palustris*), Little Brown Bat (*Myotis lucifugus*), Varying Hare (*Lepus americanus*), Woodchuck (*Marmota monax*), Red Squirrel (*Tamiasciurus hudsonicus*), Deer Mouse (*Peromyscus maniculatus*), Heather Vole (*Phenacomys intermedius*), Meadow Vole (*Microtus pennsylvanicus*), Gray Wolf (*Canis lupus*), Black Bear (*Ursus americanus*), Ermine (*Mustela erminea*), Mink (*Mustela vison*), Lynx (*Felis canadensis*), Moose (*Alces alces*) and Caribou (*Rangifer tarandus*).

Species with limited western ranges include Dusky Shrew (*Sorex obscurus*), Pika (*Ochotona princeps*), Hoary Marmot (*Marmota caligata*), Montana Vole (*Microtus montanus*), Northern Vole (*Microtus oeconomus*), Singing Vole (*Microtus gregalis*) and Mule Deer (*Odocoileus hemionus*).

Some species, such as the Varying Lemming (*Dicrostonyx torquatus*), Arctic Hare (*Lepus timidus*), Arctic Fox (*Vulpes lagopus*) and Muskox (*Ovibos moschatus*), have ranges limited to the Arctic while others have southern ranges barely pushing north into Canada, such as Pacific Water Shrew (*Sorex bendirii*), Shrew-mole (*Neurotrichus gibbsii*), Townsend's Mole (*Scapanus townsendii*), Nuttall's Cottontail (*Sylvilagus nuttallii*), Eastern Cottontail (*Sylvilagus floridanus*), Townsend's Chipmunk (*Eutamias townsendii*), Plains Pocket Gopher (*Geomys bursarius*), Great Basin Pocket Mouse (*Perognathus parvus*), Ord's

Kangaroo Rat (*Dipodomys ordii*), White-footed Mouse (*Peromyscus leucopus*), Montana Vole (*Microtus montanus*), Townsend's Vole (*Microtus townsendii*), Sagebrush Vole (*Lagurus curtatus*), Black-footed Ferret (*Mustela nigripes*) and Spotted Skunk (*Spilogale putorius*).

Numerous species of Canadian mammals are rare or endangered in some part of their range, due usually to a combination of factors including destruction of habitat and excessive hunting pressure. Notable among these are Black-tailed Prairie Dog (*Cynomys ludovicianus*), Swift Fox (*Vulpes velox*), Wolf (*Canis lupus*), Brown Bear (*Ursus arctos*), Polar Bear (*Ursus maritimus*), Marten (*Martes americana*), Black-footed Ferret (*Mustela nigripes*), Cougar (*Felis concolor*), Wapiti (*Cervus elaphus*), Sea Otter (*Enhydra lutris*) and Bison (*Bison bison*) as well as several species of whales.

A list of the 34 families of mammals found in Canada, showing the number of species occurring in Canada, follows: Didelphidae (New World Opossums), 1; Insectivora (Insectivores), 12; Talpidae (Moles), 6; Vespertilionidae (Vespertilionid Bats), 16; Molossidae (Molossid Bats), 1; Hominidae (Man), 1; Ochotonidae (Pikas), 1; Leporidae (Hares and Rabbits), 6; Aplodontidae (Mountain Beavers), 1; Sciuridae (Squirrels), 23; Geomyidae (Pocket Gophers), 2; Heteromyidae (Heteromyids), 3; Castoridae (Beaver), 1; Muridae (Rats and Mice), 32; Zapodidae (Jumping Mice), 4; Erethizontidae (New World Porcupines), 1; Ziphiidae (Beaked Whales), 7; Physteridae (Sperm Whale), 2; Monodontidae (Monodontids), 2; Delphinidae (Delphinids), 13; Eschrichtidae (Gray Whale), 1; Balaenopteridae (Balaenopterid Whales), 5; Balaenidae (Baleen Whales), 3; Canidae (Canids), 6; Ursidae (Bears), 3; Procyonidae (Procyonids), 1; Mustelidae (Mustelids), 14; Felidae (Cats), 3; Otariidae (Eared Seals), 3; Rosmaridae (Walrus), 1; Phocidae (Hair Seals), 7; Cervidae (Cervids), 5; Antilocapridae (Pronghorn), 1; Bovidae (Bovids), 5.

The Birds of Canada

Canada's rich avifauna comprises 518 species of recent birds belonging to 64 families. Birds, however, are not distributed uniformly across this vast and ecologically varied land. The Pacific Coast, western mountains, prairies, boreal forests, Atlantic Coast and arctic tundra all have species peculiar to them. Most bird species prefer particular habitats in which to live and consequently the distribution of the various species may be extremely intricate.

Some species like the American Robin (*Turdus migratorius*), Yellow Warbler (*Dendroica petechia*), Common Raven (*Corvus corax*) and Horned Lark (*Eremophila alpestris*) have vast ranges in Canada and many others are only slightly less widely distributed. Some, like Townsend's Solitaire (*Myadestes townsendii*), are confined to the western mountains and others, such as the Chestnut-collared Longspur (*Calcarius ornatus*), to the prairies. Certain species, such as the Glaucous-winged Gull (*Larus glaucescens*), are confined to the West Coast and others, like the Razorbill (*Alca torda*), to the East Coast. The Rock and Willow Ptarmigan (*Lagopus mutus* and *L. lagopus*) are examples of species that have arctic and subarctic ranges and still others, such as Bewick's Wren (*Thryomanes bewickii*) and Bobwhite (*Colinus virginianus*), have nesting ranges mostly south of Canada and penetrate only into small southernmost parts of this country. The Ipswich Sparrow (*Passerculus princeps*) has the most restricted breeding range of all, its entire nesting population being confined to tiny Sable Island, off the coast of Nova Scotia.

A number of species, for example Harcourt's Petrel (*Oceanodroma castro*) and Little Egret (*Egretta garzetta*), are accidental stragglers from distant parts of the world and have been found in Canada only once. Three species, the Great Auk (*Pinguinus impennis*), Labrador Duck (*Camptorhynchus labradorius*), and Passenger Pigeon (*Ectopistes migratorius*) are extinct; and the Eskimo Curlew (*Numenius borealis*) and Whooping Crane (*Grus americana*) have tottered on the brink of extinction for some years. The Wild Turkey (*Meleagris gallopavo*), formerly found in southern Ontario, has been extirpated but the Trumpeter Swan (*Olor buccinator*), once perilously close to extinction, has been saved by wise management practices.

ANIMALS OF CANADA

WALRUS
(*Odobenus rosmarus*)

WOOD FROG (*Rana sylvatica*)

PIKA
(*Ochotona princeps*)

SNOWY OWL
(*Nyctea scandiaca*)

The Ring-necked Pheasant (*Phasianus colchicus*) and Gray Partridge (*Perdix perdix*) have been successfully introduced into many parts of the country by sportsmen. The Starling (*Sturnus vulgaris*) and House Sparrow (*Passer domesticus*) have, since their introduction to Canada, become common widespread pests from coast to coast.

A wide variety of waterfowl and upland game birds offer good hunting during open seasons; it has been estimated that in one recent year about 350,000 persons hunted water fowl in Canada and spent close to \$30,000,000 on that aspect of game-bird hunting alone.

The summer woodlands and fields have excellent populations of song birds including many colourful and melodious species. The Hermit Thrush (*Hylocichla guttata*), widely renowned as one of the world's finest songsters, is found in remoter woodlands from coast to coast.

Although many species spend the entire year in Canada, the majority, particularly those dependent on insect food, snow-free ground or open freshwater lakes and ponds, migrate to warmer climates for the winter months.

A list of the 64 families of birds found in Canada, showing the number of Canadian species in each, follows: Gaviidae (Loons), 4; Podicipedidae (Grebes), 5; Diomedidae (Albatrosses), 3; Procellariidae (Shearwaters and Fulmars), 10; Hydrobatidae (Storm Petrels), 4; Phaethontidae (Tropicbirds), 1; Pelecanidae (Pelicans), 2; Sulidae (Boobies and Gannets), 2; Phalacrocoracidae (Cormorants), 4; Anhingidae (Anhingas), 1; Fregatidae (Frigatebirds), 1; Ardeidae (Hérons), 12; Ciconiidae (Storks), 1; Threskiornithidae (Ibises), 3.

Anatidae (Swans, Geese and Ducks), 46; Cathartidae (American Vultures), 2; Accipitridae (Kites, Hawks, Eagles, and Harriers), 13; Pandionidae (Ospreys), 1; Falconidae (Falcons and Caracaras), 6; Tetraonidae (Grouse), 9; Phasianidae (Quails, Partridges, and Pheasants), 6; Meleagrididae (Turkeys), 1; Gruidae (Cranes), 3; Rallidae (Rails and Coots), 10.

Haematopodidae (Oystercatchers), 2; Charadriidae (Plovers, Surfbirds, and Turnstones), 14; Scolopacidae (Sandpipers and Woodcocks), 36; Recurvirostridae (Avocets and Stilts), 2; Phalaropodidae (Phalaropes), 3; Stercorariidae (Skuas), 4; Laridae (Gulls and Terns), 33; Rynchopidae (Skimmers), 1; Alcidae (Auks, Murres, and Puffins), 14; Columbidae (Pigeons and Doves), 5; Cucullidae (Cuckoos), 2; Tytonidae (Barn Owls), 1; Strigidae (Typical Owls), 14; Caprimulgidae (Goatsuckers), 4; Apodidae (Swifts), 4; Trochilidae (Hummingbirds), 4; Alcedinidae (Kingfishers), 1; Picidae (Woodpeckers), 13.

Tyrannidae (Tyrant Flycatchers), 22; Alaudidae (Larks), 2; Hirundinidae (Swallows), 7; Corvidae (Jays and Crows), 8; Paridae (Titmice), 7; Sittidae (Nuthatches), 3; Certhiidae (Creepers), 1; Cinclidae (Dippers), 1; Troglodytidae (Wrens), 8; Mimidae (Mockingbirds and Thrashers), 4; Turdidae (Thrushes), 13; Sylviidae (Old World Warblers, Gnatcatchers and Kinglets), 4; Motacillidae (Wagtails and Pipits), 3; Bombycillidae (Waxwings), 2; Laniidae (Shrikes), 2; Sturnidae (Starlings), 2; Vireonidae (Vireos), 8; Parulidae (Wood Warblers), 42; Ploceidae (Weaver Finches), 1; Icteridae (Meadowlarks, Blackbirds and Orioles), 12; Thraupidae (Tanagers), 3; Fringillidae (Grosbeaks, Finches, Sparrows and Buntings), 56.

Amphibians and Reptiles in Canada

Similar to the pattern of concentration of human settlement in Canada, amphibians and reptiles are most numerous (in terms of total number of species) in a relatively narrow region along the country's southern border. To the north there are progressively fewer species. At the mouth of the Mackenzie River and in northern Quebec, the northern distribution limits for these cold-blooded vertebrates, there is only one species represented. In Canada as a whole, there has been recorded a total of 82 species, or 110 forms when all races or subspecies of those species having more than one recognizable race in this country are included. Of these, 50 are amphibians (25 frogs, toads and treefrogs, 25 salamanders and newts) and 60 are reptiles (38 snakes, 6 lizards and 16 turtles).

No one species occurs throughout the country, although the Wood Frog (*Rana sylvatica*) has been recorded in both Yukon Territory and the Northwest Territories (it occurs north to the mouth of the Mackenzie River, within the Arctic Circle) and has been collected in every province except Newfoundland. Newfoundland actually has no native amphibians or reptiles because it has been separated from the mainland by a relatively deep channel since the glacial retreat 10,000 years ago. Amphibians and reptiles spreading north and repopulating the country were presumably excluded by an impassable, to them, saltwater barrier. Other large islands, such as Prince Edward Island and Vancouver Island, had land connections with the mainland for a sufficient period to receive the advancing immigrants before the melting of the receding continental ice sheet raised the sea level to the point where the bridge was inundated.

The most northerly occurring reptile is a snake—the Common Garter Snake (*Thamnophis sirtalis*) which has been recorded at Fort Smith, N.W.T. This snake is also the most widely distributed reptile in the country and, although apparently absent from Yukon Territory, it has been recorded in one form or another (five or six races of it occur in Canada) in every province except Newfoundland.

Three species of rattlesnake, one having two distinct races, are Canada's only poisonous reptiles, although several harmless species, particularly in the east, are repeatedly mistaken for rattlesnakes, copperheads or water moccasins. The latter two forms have never been collected in Canada. Specimens erroneously identified as one or the other have always turned out to be the Fox Snake (*Elaphe vulpina*), the Milk or House Snake (*Lampropeltis triangulum*), the Northern Water Snake (*Natrix sipedon*) or some equally harmless, although relatively large (by Canadian standards any snake three feet or more in length is large) species. Most difficult of the poisonous snake fables to comprehend is the evil reputation attached to a little (rarely over 12 inches) snake, red underneath and brown, black or grey above. From Nova Scotia to eastern Saskatchewan the Red-bellied Snake (*Storeria occipitomaculata*) is often referred to as the Copper Snake and given deadly qualities by the uninformed and the easily intimidated, yet the tiny mouth and short teeth of this small snake could not succeed even in scratching a human tormentor and it certainly has no poison.

The three poisonous snakes that do occur in Canada are the Massasauga (*Sistrurus catenatus*) in southern Ontario, particularly the Georgian Bay and Bruce Peninsula areas; the Timber Rattlesnake (*Crotalus horridus*) in southern Ontario which may be extinct in Canada since the last known colony was in the Niagara Gorge and a specimen has not been taken there for over 25 years; and the Western Rattlesnake which occurs as two distinct races—the light-coloured Prairie Rattlesnake (*Crotalus viridis viridis*) in southwestern Saskatchewan and southeastern Alberta and the darker Pacific Rattlesnake (*Crotalus viridis oreganus*) in the southern dry interior valleys of British Columbia.

The gradually increasing harshness of the climate is the most common factor preventing the northward spread of a reptile or amphibian species in Canada, although for some species specialization to a particular habitat may prevent wider distribution. The most vulnerable stage is the egg—the most northerly ranging frog (the Wood Frog) has an egg best adapted for development at low temperatures. The most northerly occurring reptile, the Common Garter Snake, bears its young alive and therefore is its own mobile incubating chamber, able to move to the warmest spots at each period of the day and assure the rapid development of the embryos essential in a northern environment.

Although a wide variety of freshwater and terrestrial situations are inhabited by Canadian amphibians and reptiles, only a few marine turtles, migrating from tropical regions during the summer, utilize the saltwater habitat. No amphibian tolerates this environment, although occasionally toads will lay their eggs in brackish pools along the coast.

Canada's Fish Fauna

Canada has a varied and rich fish fauna for the country borders on three oceans, has the longest coastline of any country in the world, and has over one quarter of the world's supply of fresh water. In these many waters, from sparkling mountain torrents to unlit deepsea depths, are known 770 living species, 190 of which occur in fresh water. The fish fauna is far from being thoroughly explored and several species are added to the known fauna each year. At present over 150 species of fossil fishes are known in Canada; about 20,000 species are known altogether in the world.

What is a fish? It is a cold-blooded vertebrate animal, breathing with gills throughout its life and having limbs, if any, in the form of fins. Salamanders have foot-like limbs and whales are warm-blooded so that these forms are not fishes. Three major groups of fishes are found in Canada—the lampreys, the sharks and the bony fishes—the first having only 12 species, the second 49 and the bony fishes the remainder. Each of the three groups is as distinct (or more so) as the groups of birds and of mammals and each species is placed in its own class.

Canada's fish vary in size from the 45-foot-long basking shark to such pygmies as the least darter which seldom exceeds $1\frac{1}{2}$ inches. They vary in form from the flattened rays and skates and the ball-like spiny lumpsucker to the slender elongate quillfish. Structures varied and remarkable are found. The electric ray has organs in its wings capable of giving a considerable shock, the lantern fish has rows of tiny light organs that may be equipped with lenses and reflectors, the deepsea dreamer possesses an illuminated lure for attracting prey, the seasnail has a sucking organ below for clinging to rocks, the herring has tubes from its gas bladder running forward to its inner ear, increasing the sensitivity of its hearing.

It is not only in structure that they vary. Intriguing behaviour patterns include nest-building in the stickleback, burrowing through the sand in the sand lance, flying through the air in the flying fishes, hitching rides on sharks in the remoras. Atlantic salmon tagged in Canada have been caught near Greenland. Chum salmon spawn in Teslin Lake in northern British Columbia after travelling about 2,000 miles up the Yukon River system from Bering Sea. However, much is yet to be learned of the species and habits of the piscine inhabitants of 'inner space' from the point of view of economic utilization of fisheries, of recreation and of advancing man's knowledge of the world around him.

Canada's waters are renowned for their sport fishes. In fresh waters there are at least 50 kinds to tempt the angler. The rainbow trout, native to the west and decorated by an iridescent band along its side, is famed for its head-shaking, lure-throwing jumps. In northern waters the Arctic grayling, resplendent in royal purple, and the orange-spattered Arctic charr await the angler. In the east are found the voracious muskellunge and spunky large and smallmouth basses. The sunfishes and yellow perch are widespread favourites of the young. On the East Coast the Atlantic salmon is considered by its devotees to be the finest gamefish in the world. It rises well to the dry fly and is known to attain weights of over 50 lb.

In the sea waters, too, a host of species awaits the angler or skin diver. On the West Coast are the chinook and coho salmon—the chinook is the mightier, reaching 126 lb., but pound for pound the coho is just as game. The powerful ling cod, attaining lengths of up to five feet, is a worthy quarry for skin divers. Near kelp beds and reefs await a dozen kinds of rockfish painted in hues of red, brown, yellow and green. On the Atlantic Coast is found the bluefin tuna—one caught off Nova Scotia weighed 977 lb. In winter, near river mouths, the tomcod attracts the ice fisherman.

Research on Canadian fishes is undertaken by several organizations. Most provincial governments study and administer their own freshwater sport fisheries, while Quebec includes both marine and freshwater fishes. The federal Department of Fisheries regulates the marine and commercial fisheries, and the Fisheries Research Board of Canada conducts scientific research for it. Canada belongs to several international fishery com-

missions which study and regulate certain fisheries such as salmon, halibut and cod.* All these organizations are primarily interested in regulating fish stocks to give maximum benefit to commercial and sport fisheries. In addition to the Fisheries Research Board of Canada, two other groups are interested in more fundamental research on fishes. The results of these researches are not always immediately evident but, like pure research in electronics or chemistry, there is no doubt that they often have valuable practical results and contribute also to man's knowledge. Universities not only train fisheries biologists and ichthyologists but do independent scientific research, covering such fields as physiology, ecology, ethnology, anatomy, parasitology and population dynamics. The National Museum of Canada and university and provincial museums actively conduct fundamental researches on fishes, their studies dealing primarily with classification and evolution of fish but also with zoogeography, ecology and behaviour. A major product of museum activity is the publication of identification handbooks which contain the results of studies on preserved scientific specimens. In the National Museum of Canada, for example, there are more than 100,000 specimens of over 1,000 species of fishes.

Canada annually harvests about 2,000,000,000 lb. of commercial fishes worth about \$250,000,000 from the sea and fresh waters. About two thirds of this is exported and there remains a large potential for expansion. Current studies indicate a valuable market for a highly nutritive, pure protein, fish flour prepared from Canadian fishes. Sport fisheries are also an important economic asset, attracting many fishermen from outside the country. Beyond the value of this sport in dollars and cents, there is another value no less important—the unmeasurable contribution it makes to the physical and mental well being of its participants. Scientifically, fishes also represent an intellectual resource that can add to man's knowledge.

The Arthropods of Canada

The arthropods are a group of mainly small-sized invertebrate animals that have jointed legs and other appendages and grow by periodically shedding their outer skin or exoskeleton. More than three quarters of Canada's 100,000 species (approximately) of animals belong in this group. It includes the largest animal group, the insects, as well as the arachnids, centipedes, millipedes, and the crustaceans.

The insects are much the most numerous and most diverse arthropod group, both in anatomical structure and in their natural occurrence. They occur throughout the Canadian region, from the Pacific to the Atlantic and from the southern border (where most kinds occur) to the sparsely populated islands of the Arctic where visible activity is limited to but a few weeks each year. Insects have invaded or occupied many types of environments, from the sea surface and intertidal shore zone, through land and freshwater habitats of nearly every permanent and temporary kind, to high alpine lakes and streams and glacial surfaces. The fleas, lice and certain flies are parasitic on diverse kinds of vertebrate and invertebrate animals, including other insects. Virtually no green plant, from unicellular alga to giant Douglas fir, is immune to insect attack or consumption. Almost all of the 27 living world orders of insects are represented in Canada, although some by only one or two species. Well represented are the important orders, namely, the primitively wingless springtails (Collembola) of the forest floor; the primitively aquatic hemimetabolous mayflies (Ephemera), stoneflies (Plecoptera), and dragonflies (Odonata), and the terrestrial cockroaches (Blattaria) and grasshoppers (Orthoptera), all of which have a fossil record stretching back to the late Palaeozoic (nearly 250,000,000 years ago); and the holometabolous primarily terrestrial orders of relatively recent evolution, such as the butterflies and moths (Lepidoptera), two-winged flies (Diptera) and the ants, bees and wasps (Hymenoptera). The caddis flies (Trichoptera), the bugs (Hemiptera), and the beetles (Coleoptera) are other major orders, the last being the world's largest insect group, and in Canada about equal to the Diptera in numbers of species. Well-preserved insect remains of about 250 species are now known from the Cretaceous amber deposits of mid-

* See also Chapter XIV, Part I, Section 4.

western Canada, some genera of which still exist. Of approximately 60,000 insect species and subspecies recorded from Canada, several hundred have not been recorded elsewhere, and many of these (particularly from arctic areas) will prove to be endemic Canadian species.

The arachnida, including the spiders, mites and ticks, harvestmen, scorpions, solifugids, false scorpions and a number of lesser orders, comprise the second largest arthropod group in Canada. Fewer than 10,000 species are known from the region to date but the total number will undoubtedly prove to be several times larger. The mites and ticks (Acari) are by far the largest and most diversified group. Free-living species are common in fresh waters and in marine intertidal habitats. Most species are parasitic on other animals and on plants, and some are vectors of disease (e.g., Rocky Mountain spotted fever). Fewer than 1,000 species of spiders (Araneida) are known from Canada. Most are terrestrial but some live along the seashore and a few (Dolomedes) are aquatic and sometimes prey on small fish. Only about two dozen species of each of the harvestmen or daddy-long-legs (Phalangida) and false scorpions (Pseudoscorpiones) and one each of the sun spiders (Solifugae) and true scorpions (Scorpiones) are known from Canada.

The sea spiders (Pycnogonida) are slender-bodied arachnid-like arthropods that resemble harvestmen. About 50 Canadian species are known, mainly from the Pacific and Arctic coastal regions but some species range into the ocean abyss. The horseshoe crabs (Xiphosura) are not true crabs but are distant cousins of the spiders and scorpions. *Limulus polyphemus* is common on mud flats of the Atlantic Coast north to central Maine, but specimens occasionally turn up in the Fundy region of Eastern Canada.

The centipedes (Chilopoda) and millipedes (Diplopoda) each number about 75 species in Canada. Almost half of the species have been introduced by the early settlers and by subsequent accidental importation with exotic plants. These and a few species of Pauropoda and Symphyla, minute wingless wormlike soil-dwelling arthropods, occur only south of the treeline and the permafrost.

The crustaceans are the largest primarily aquatic group of arthropods. Approximately 1,500 species have been recorded from Canada. The small and microscopic, primitive crustaceans (Entomostraca) including fairy shrimps, tadpole shrimps, clam shrimps, seed shrimps and water fleas, are primarily or exclusively confined to fresh waters, although the seed shrimps (ostracods) and copepods are both marine and freshwater, and the barnacles (cirripedes) are exclusively marine. On the other hand, the larger, macroscopic, more highly evolved crustaceans (Malacostraca), including the nebaliaids, mysid (opposum) shrimps, amphipods, isopods, sea mantis, euphausiids (krill) and the decapod shrimps, hermit crabs and true crabs, live mainly or exclusively in the marine environment. However, a few mysids, several families of isopods and amphipods as well as some decapods (e.g., crayfish) are more common in fresh waters, and one group of each of the isopods (sow bugs, pill bugs) and amphipods (beach fleas, leaf litter hoppers) have become essentially terrestrial.

Crustaceans are very important in the economy and ecology of the aquatic environment. In the sea, the copepods are the dominant planktonic animals that feed upon the microscopic phytoplankton of the upper water layers and in turn provide the basic food item for marine fishes, and hence indirectly for man. *Calanus finmarchicus* often swarms at the surface over the Canadian Atlantic shelf region (e.g., Grand Banks) and colours the sea reddish. Crustaceans of wider gastronomic familiarity (copepods are actually edible) are the larger, free-swimming decapod shrimps (*Pandalus borealis*, *P. montagui*) or bottom dwelling crustaceans such as the American lobster (*Homarus*) and larger crabs (*Chionecetes opilio*, *Geryon quinquedens*) that can be fished in deeper parts of the shelf region. Since 1950, the average value of the Canadian maritime lobster industry has been approximately \$25,000,000 a year and has been holding up well despite a gradual decline in availability of market-size animals. Cancer crabs, frequently captured in lobster pots, are edible but too small to be profitably marketed. On the Pacific Coast, however, the Dungeness crab (*Cancer magister*) is the basis for a valuable crab fishery.

Cancer crabs and the green crab (*Carcinides maenas*) that invaded the Fundy region during the past ten years, do serious damage to clam and oyster beds. The lady crab (*Ovalipes ocellatus*) is a colourful free-swimming species found in Minas Basin and Northumberland Strait. Four species of hermit crabs are commonly taken in the Atlantic region, the largest of which is the blue-handed hermit (*Pagurus acadianus*) living in empty shells of large moon snails and whelks. The sand shrimp (*Crango*) is very common in the sandy shallows of protected beaches. Amphipod crustaceans are virtually everywhere, living mainly on or in the bottom. They may be free-living, burrowing, tube-dwelling, or even parasitic, and form one of the basic food items of most bottom-feeding fishes such as cod, halibut, hake and sole. The seaside visitor may find beach fleas and beach hoppers (*Orchestia*, *Talorchestia*) hiding under debris or in the moist sand at the drift line. He may disturb the scuds (*Gammarus*, *Marinogammarus*) sidling about under stones or algae at mid-tide levels, or screen out the squat-bodied haustoriids that literally swim through the wet sand underfoot with astonishing rapidity, or perhaps net the free-swimming scuds (*Callinopis*, *Gammarellus*, *Pontogeneia*) that occur in cloud-like swarms among the kelps, the fucoids and Irish moss of wave-battered shores. The opossum shrimps (*Mysis*, *Neomysis*) frequently swarm among the eel-grass in brackish water estuaries at river mouths. The isopods (e.g., *Idothea*) are flattened above and below like a cockroach, enabling them to crawl about among the boulders and algae, to which they cling with strong curved claws of their seven pairs of walking legs.

The barnacles are sessile or sedimentary crustaceans living inside their calcareous walls or plates attached to a rock or other firm substrate. They feed by extending their coiled filamentous legs out between their opercular plates and straining minute particles from the sea water. The common acorn barnacle (*Balanus balanoides*) lives intertidally on rocky shores of the Atlantic and parts of the Arctic and Pacific shores of Canada. Other species (*Balanus cariosus*, *B. improvisus*) are more common in estuaries and protected bays and are frequent fouling organisms on vessels, wharves and aids-to-navigation. Goose barnacles (*Lepas* spp.) attach to free-floating objects such as boxes, planks, bottles and net floats and are washed ashore on open ocean coasts, usually following onshore winds. One species (*Mitella polymerus*) attaches in clusters to surf-pounded rocks at mid-tide level along the Canadian Pacific Coast.

The arctic intertidal, because of severe winter temperatures and heavy ice scouring, is virtually without crustacean life, except for those species that can burrow in the bottom or invade the region during the ice-free summer. Amphipods and decapod shrimps are the dominant arctic bottom crustaceans, but only a very few crabs and hermit crabs are present.

The Pacific Coast, on the other hand, has a very rich fauna of most major crustacean groups, largely because of its nutrient-rich waters, its relatively uniform seasonal range of temperature, and freedom from winter icing. Approximately three times as many species are found there as at equivalent latitudes on the Atlantic Coast. True crabs are dominant, even in the intertidal zone where *Hemigrapsus nudus* and *H. oregonensis* abound. Five species of native *Cancer* crabs provide stiff competition to the newly introduced lobster. Several species of small pinnixid crabs live parasitically within the mantle cavity of large bivalve molluscs. More than 10 kinds of hermit crabs, mostly small species of *Pagurus*, and of lithodid crabs (*Petrolisthes*, *Emerita*, *Haplogaster*, and the giant edible king crab *Paralithodes*) are also known from the Pacific Coast, and three kinds of ghost shrimps (*Callinassa*, *Upogebia*) riddle the mud flats with their deep inter-connected burrows. About 50 kinds of penaeid and caridean shrimps and prawns, several of commercial importance, have been recorded from the fiords, inlets and shelf waters of this much-dissected coastline. Amphipods and isopods are also more varied in type and more abundant numerically than on the Atlantic Coast, although represented by different species and usually different genera in comparable intertidal habitats. The crustacean fauna of open sandy beaches is particularly well-developed and shows striking intertidal zonation, perhaps reflecting a rich food supply, protection from desiccation by frequent coastal fogs, and a relatively stable regional geological history.

Although almost all of Canada's freshwater bodies have been formed only since the end of the last ice age, a surprisingly rich and varied freshwater crustacean fauna has since managed to occupy the region from coast to coast and to the limit of melt ponds in the Arctic islands.

Fairy shrimps and tadpole shrimps occur only in temporary ponds, devoid of fishes and vertebrate predators, where they survive unfavourable periods of drought and freezing temperatures by means of resting eggs. Many of the microcrustaceans such as water fleas (*Daphnia*, *Simocephalus*, *Bosmina*, *Chydora*) and copepods (*Cyclops*, *Diaptomus*) living planktonically also survive and are transported from pond to pond by wind-blown or bird-carried resting eggs.

Ostracods are small active crustaceans with a seed-like bivalve shell, often remarkably sculptured, that inhabit all types of bottoms in both standing and running waters including rooted vegetation, algal mats, mud, sand and rubble. Eggs develop parthenogenetically and are resistant to desiccation for up to 20 years.

Among the higher crustaceans, the Amphipoda are represented by about 30 freshwater species of which *Gammarus lacustris*, *Hyalella azteca*, and *Crangonyx richmondensis* subsp. are the most widely distributed; the Isopoda by about a dozen species (*Asellus*, *Lircaeus*) and the Mysidacea by *Mysis relicta* of the larger deeper lakes. The decapods include the shrimp *Palaemonetes kadiakensis* in the Great Lakes system, and several species of the crayfish genera *Pacifastacus*, *Cambarus*, and *Orconectes*, some of which occur in Canada only in southern Ontario. Some crayfish species are edible, although not generally consumed in Canada, and the semi-terrestrial species of *Cambarus* do damage to lawns and embankments by tunnelling and by constructing earthen mounds or 'chimneys' at their burrow entrances.

The Mollusca of Canada

The Mollusca are an economically important, geologically ancient and biologically diverse segment of the fauna of Canada. The Phylum contains six classes: Monoplacophora, Amphineura (chitons), Gastropoda (snails, slugs, etc.), Scaphopoda (tusk shells), Pelecypoda (bivalves, i.e., clams, mussels, etc.) and Cephalopoda (squids and octopods), and all of these except Monoplacophora occur in Canada. About 2,500 species of Canadian marine, freshwater and land molluscs representing 185 families have been recorded. In fact, among all animals the molluscs rank second only to the arthropods (insects, crabs, amphipods, etc.) in having the largest total numbers of known species. In 1966 over 49,000,000 pounds of clams, oysters, scallops and squids were commercially harvested in Canada. The damage caused by teredos (shipworms) and other injurious molluscs amounts to several millions of dollars annually. Many other examples of the medical and economic importance of molluscs could also be cited. So, although Canadian species are not as colourful or exotic as tropical species and are not as eagerly sought by shell collectors, they are nevertheless of great significance to man.

On the Atlantic Coast a warm shallow-water marine molluscan fauna occurs in the vicinity of Northumberland Strait and in isolated bays in Nova Scotia (Minas Basin, St. Mary Bay), characterized by the oyster *Crassostrea virginica* and the quahog *Mercentaria mercenaria* and representing a somewhat reduced, disjunct segment of the Virginian fauna; this fauna ranges elsewhere from Cape Cod to Cape Hatteras.

Except for these pockets of warm-water species, the Maritime region as far north as southern Newfoundland and the south shore of the St. Lawrence estuary is occupied by the North Atlantic Boreal Fauna which is very similar to that of northern Europe and is characterized by such species as the whelk *Buccinum undatum*, the mahogany clam *Arctica islandica* and the horse mussel *Modiolus modiolus*.

North of this region and extending throughout Hudson Bay, the Arctic Archipelago, and west to Alaska, an Arctic Fauna thrives which, in turn, is much like that of Greenland

and arctic Eurasia. The Iceland cockle *Clinocardium ciliatum*, the Greenland cockle *Serripes groenlandicus*, and the whelk *Buccinum hydrophanum* are widespread members of this fauna.

On the Pacific Coast an even richer fauna occurs. The northern portion of the Transition Zone between the Californian and Aleutian faunal regions extends to Puget Sound and southern Vancouver Island. Characteristic species of that region are Lewis' moon-snail *Polinices lewisi*, the purple dwarf olive *Olivella biplicata* and the geoduck clam *Panope generosa*. The Aleutian faunal region extends from southern Vancouver Island to the Alaska Peninsula. Typical species of that region are the frilled dogwinkle *Thais lamellosa*, the false jingle shell *Pododesmus macroschismus*, and the giant Pacific scallop *Pecten caurinus*.

The freshwater molluscs of Canada (gastropods and pelecypods) number about 175 species and subspecies and these are restricted, in part, to separate watersheds. The Maritimes and eastern Quebec are populated by the Atlantic Coastal Plain Fauna. This is typified by the freshwater mussels *Margaritifera margaritifera*, *Elliptio complanata*, and *Anodonta cataracta*. The Great Lakes-St. Lawrence drainage, especially the Lake Erie and Lake St. Clair portion, contains a rich fauna derived principally from the Mississippi Basin through post-glacial confluence. Characteristic species here are the freshwater mussels *Amblema plicata*, *Lasmigona costata*, and *Actinonaias carinata* and the snails *Pleurocera acuta* and *Goniobasis livescens*. Unfortunately, many species in this region are in danger of gross reduction or possible extinction through pollution.

North of that region the huge Hudson Bay and Arctic watersheds contain about 100 species derived from adjacent source areas after deglaciation. Some species (*Stagnicola arctica*, *Pisidium* spp., etc.) occur as far north as southern Baffin Island and southern Victoria Island. The Red River system in Manitoba supports more freshwater species than any other drainage in the Hudson Bay or Arctic watershed because of long-term confluence with the Mississippi Basin. Such freshwater mussels as *Amblema plicata*, *Quadrula quadrula*, *Proptera alata* and many others occur there. Elsewhere within the subarctic region the distribution of some species is broadly co-ordinated with phytogeographic zones but since internal zoogeographic barriers are absent there is little concordance between molluscan distributions.

The Rocky Mountains and the Pacific coastal region contain a distinct freshwater molluscan fauna characterized by the snail *Fluminicola nuttalliana* and the mussels *Anodonta wahlamettensis* and *Gonidea angulata*. Some elements of this fauna (*Anodonta kennerleyi*, *Menetus cooperi*, *Helisoma binneyi*, etc.) have also penetrated east of the mountains into north-central Alberta. The Yukon Territory, Alaska and adjacent portions of the Northwest also contain a few endemic species (e.g., *Anodonta beringiana*, *Stagnicola atkaensis* and *S. kennicotti*) presumably isolated in the Beringian Refugium during the Pleistocene.

The land molluscs of Canada (snails and slugs—about 240 species and subspecies) are broadly assignable to three zoogeographic areas designated as Eastern, Central and Western, although many distributional anomalies are known. Examples of these fauna are: Eastern Region—*Triodopsis albolabris*, *Mesodon thyroides*, and *Mesodon sayana*; Central Region—*Triodopsis multilineata*, *Mesodon zaletus*, and *Discus patula*; and Western Region—*Oreohelix strigosa*, *Haplotrema vancouverensis*, and *Prophysaon andersoni*. A number of terrestrial species occur in all three regions, however (e.g., *Zonitoides arboreus*, *Discus cronkhitei*, and *Cionella lubrica*), and some occur even at the treeline which is the usual climatic limit for land snails. In addition, many European species have been introduced at various locations in Canada (e.g., *Arion ater* in Newfoundland, *Cepaea memorialis* in southern Ontario and in the Vancouver area, and *Hygromia striolata* at Quebec City) but as yet no foreign agricultural pest species have become established here.

Canadian Marine Invertebrate Life

Canada's extensive coastline is bounded by three major ocean masses, the North Atlantic, Arctic and North Pacific. As a result of physical characteristics of each of these

masses, a rich and varied marine invertebrate fauna occurs, particularly along the Atlantic and Pacific coastal areas. The seashore fauna of Arctic Canada is impoverished, mainly owing to the abrasive action of shore ice in winter. Sublittorally, however (40 metres and deeper), a moderately varied, although somewhat numerically reduced assemblage of mainly circumpolar species exists.

The Atlantic Coast of Canada provides a wide range of summer temperature conditions but its fauna is essentially a cold-temperate or boreal one. The cold, southward flowing Labrador current, however, provides a favourable environment for numerous sub-arctic species, for example among the sea mosses (Phylum Bryozoa). Between the Gulf of St. Lawrence and Cape Cod to the south, these two faunal constituents co-exist but the sub-arctic fauna finds its southern boundary there. On the other hand, the summer-warm surface waters of the southern Gulf of St. Lawrence permit the existence of a third temperature group, the Virginian (temperate-zone) fauna, isolated from its main populations south of Cape Cod.

Canada's richest marine invertebrate fauna undoubtedly occurs along its Pacific Coast. In this region there is strong upwelling of nutrient-rich coastal bottom water supplemented by heavy seaward flow of fresh water from Pacific watersheds. The resulting bountiful food supply enables a remarkable variety of species to exist, frequently in great abundance. At comparable latitudes the number of Pacific species is more than threefold that of the Atlantic Coast. To the layman, perhaps the most striking manifestation of this abundance is the profusion of great green sea anemones (*Bunodactis xanthogrammica*) and common starfish (*Pisaster ochraceus*) along the rocky, surf-pounded shores of the Pacific Coast.

As on the Atlantic Coast, the invertebrate fauna of the Pacific Coast contains two main elements: a sub-arctic group, and a larger Pacific boreal assemblage. Some of the sub-arctic species (particularly among the sea mosses) reach their southern boundary at Vancouver Island but, due to uniformly low summer temperatures along much of the American Pacific Coast, certain of the sub-arctic and many of the boreal species from all of the major phyla occur southward to about Point Conception, California. Also, a small number of warm-water species, native to places south of Point Conception or elsewhere in the world, are isolated in the summer-warm surface waters of the Strait of Georgia in British Columbia.

Species of most marine invertebrate phyla are commonly found along Canada's rocky shores. On the Atlantic Coast are frequently found sponges (Porifera) such as the tufted sponge (*Grantia ciliata*), the eyed finger sponge (*Chalina oculata*), and the crumb-of-bread sponge (*Halichondria panicea*); among the coelenterates are the white sea jelly (*Aurelia aurita*), the great pink jellyfish (*Cyanea capillata* var. *arctica*) and the hydroids *Bougainvillea superciliaris* and *Hydractinia echinata*. The segmented marine worms include the scale worm (*Lepidonotus squamatus*) and the tube worm (*Amphitrite figulus*). The spiny-skinned animals (Echinodermata) include the common purple starfish (*Asterias vulgaris*), the blood star (*Henricia sanguinolenta*), the sun star (*Crossaster papposus*), the basket star (*Gorgonocephalus arcticus*), the daisy brittle star (*Ophiopholis aculeata*), the green sea urchin (*Strongylocentrotus drobachiensis*) and the large northern sea-cucumber (*Cucumaria frondosa*). Among a dozen or so conspicuous sea mosses may be mentioned *Lichenopora verrucaria*, *Alcyonidium polyomm*, *Bugula turrita*, *Electra pilosa*, and the horned sea wrack *Fuflura foliacea*.

An abbreviated listing would scarcely do justice to the immensely diverse Pacific marine fauna. Some species are common to the two coasts, but the dominant Pacific species are endemic. The large erect sponge (*Neosperiopsis rigida*), the encrusting sponge (*Haliclona rufescens*) and the cake-frosting sponge (*Xestospongia vanilla*) are frequent at low water levels. The large white sea anemone (*Metridium senile*) is common on wharf pilings and the solitary anemone (*Bunodactis elegantissima*) and the great green sea anemone (*B. xanthogrammica*) coat the lower intertidal rocks. Slender hydroids include *Eudendrium californicum*, *Garveia annulata*, *Hydractinia milleri*, and *Sertularia turgida*. Con-

spicuous among marine worms are the calcareous tube-building *Serpula vermicularis* and *Amphitrite robusta*, the colonial *Eudistylia polymorpha*, and the free-swimming clam worm *Nereis virens*. Attached to subtidal rocks is the lamp-shell *Terebratalia transversa* (Phylum Brachiopoda). The curious worm-like *Phoronis vancouverensis* forms gelatinous masses on intertidal rocks. The echinoderm fauna of this region is probably the richest in the world. Conspicuous intertidal species are the leather star (*Dermasterias imbricata*), sea bat (*Patiria miniata*), the very large sunflower star (*Pycnopodia helianthoides*), and the common starfish (*Pisaster ochraceus*). Echinoids include the green sea urchin, the giant red urchin (*Strongylocentrotus franciscanus*), and the large purple urchin (*S. purpuratus*). The large soft-bodied California cucumber *Stichopus californica*, the reddish cucumber *Cucumaria miniata* and the white cucumber *Eupentacta quinquearmata* are also common.

The sea moss fauna of coastal Pacific Canada is extensive although not yet completely documented. Among the more common species are: *Cribrilina annulata*, *Tubulipora tuba*, *Filicrista geniculata*, *Alcyonidium polyommum*, *Dendrobeatia curvirostris*, *Bugula pacifica*, *Tricellaria occidentalis*, *Scrupocellaria californica*, *Reginella furcata*, *Dakaria ordinata*, *Microperella umbonata*, *Parasmittina collifera*, *Rhynchozoon tumulosum*, *Lagenipora spinulosa*, *Hippodiplosia insculpta*, *Eurytomella bilabiata*, and *Phidolopora pacifica*.

PART III.—CLIMATE AND TIME ZONES*

Section 1.—Climate

Just as there are great differences in the weather throughout Canada at any given instant, there are also many climates. These climates are similar to those in Europe and Asia extending from the Arctic down to the mid-northern hemispheric latitudes. Because Canada is situated in the northern half of the hemisphere, most of the country loses more heat annually than it receives from the sun. The general atmospheric circulation compensates for this and at the same time produces a general movement of air from west to east. Migrant low pressure areas move across the country in this "westerly zone", producing storms and bad weather. In intervals between storms there prevails the fair weather associated with high pressure areas.

Although the movement of migrant high and low pressure systems within the zone of the westerlies is the most significant climatic control over Canada, the physical geography of North America contributes greatly to the climate. On the West Coast, the western Cordillera limits mild air from the Pacific to a narrow band along the coast, while the prairies to the east of the mountains are dry and have extreme temperatures because they are shielded from the Pacific Ocean and are in the interior of a large land mass. In addition, the prairies are part of a wide north-south corridor open to rapid air flow from either north or south which often brings sudden and drastic weather changes to this interior area. On the other hand, the large water surfaces of Eastern Canada produce a considerable modification to the climate. In southwestern Ontario winters are milder with more snow, and in summer the cooling effect of the lakes is well illustrated by the number of resorts along their shores. On the East Coast, the Atlantic Ocean has considerable effect on the immediate coastal area where temperatures are modified and conditions made more humid when the winds blow inland from the ocean.

The following table gives temperature and precipitation data for typical stations in the various regions of Canada. Temperatures in this table refer to observations taken in a thermometer shelter which has been placed in a representative location with the thermometer bulbs four feet above the surface of the ground. Mean January and July tem-

* Sections 1 and 2 of this part were prepared by the Meteorological Branch of the Department of Transport, Toronto. A comprehensive study on The Climate of Canada, also prepared by the Meteorological Branch, was carried in the 1959 Year Book, pp. 23-51. Supplementing that textual material, detailed tabulations of climatic factors for 45 individual meteorological stations across the country were carried in the 1960 Year Book, pp. 33-77. A reprint is available from the above source giving the complete textual and tabular data. A special article on The Climate of the Canadian Arctic appears in the 1967 Year Book at pp. 55-74, an augmented reprint of which is also available from the Meteorological Branch.

perature data are based on records over the 30-year period from 1931 to 1960 except for far northern stations where the available period of record is shorter. After an average temperature is obtained for each day in January over a 30-year period, the mean January temperature may be arrived at by striking a mean of these 930 daily values. The mean July temperatures may be obtained in a similar manner. The highest and lowest temperatures on record refer to the absolute extremes for the entire period of record at each station. Average dates are shown for the last occurrence in spring of a temperature of 32°F or lower and for the first occurrence in autumn of freezing temperatures at the four-foot level in the thermometer shelter.

The official Canadian rain gauge is a small cylinder in which the rain is caught and then measured to one hundredth of an inch with a simple measuring device. Freshly fallen snow is measured as it lies on the ground and recorded to the tenth of an inch. Total precipitation values as shown in the table are the sum of the total rainfall and one tenth of the total snowfall. For the purposes of this table, a day with precipitation is one on which at least one hundredth of an inch of rain or one tenth of an inch of snow has fallen.

¹ Total rainfall and one tenth of the total snowfall.**Section 2.—Meteorological Observing Stations**

In January 1966, official meteorological observations were taken and recorded at 2,313 weather reporting stations in Canada. There are several different classes of stations ranging from the first-order reporting stations at airports where hourly observations of all aspects of the weather are recorded, to the co-operative observing stations where a volunteer observer makes daily observations of rainfall, snowfall and temperature or precipitation only. While there are vast areas of the country where the weather stations are several hundred miles apart, most of the settled parts of the country are represented by first-order hourly reporting stations every 100 miles or so, and by co-operative climatological observing stations at least every 25 miles.

At most of the 274 first-order synoptic stations complete weather observations are made every six hours and at a large percentage of them only slightly less complete observations for aviation forecasts are made every hour. These weather data, including information on temperature, precipitation, pressure, wind, humidity, cloud and visibility, are sent first by radio and teletype to the different weather offices across the Continent to be used for weather forecasting purposes, and then at each month-end the manuscript reports are sent by mail to Meteorological Branch Headquarters for use in compiling climatic statistics. At 101 of these observing stations, personnel of the Telecommunications Branch of the Department of Transport take weather observations as part of their scheduled duties, and 28 stations are operated in a similar manner by the different Armed Services; 93 stations are operated by Meteorological Branch personnel and the remainder are operated under contract, or by co-operative arrangement with various transportation and communications companies.

Twice daily, at 34 locations throughout the country, complete upper air observations are made from the surface to altitudes upwards to 100,000 feet. Pressure, temperature and humidity measurements are determined by radiosonde instruments carried aloft by balloons and the information reported by radio to the ground receiving stations; winds are

determined by observing the drift of the balloon by means of radar or radio direction finding ground equipment. There are also 30 locations where the winds in the lower layers of the atmosphere are determined by observing free balloon drift by means of a theodolite or by radar. As in the case of the first-order synoptic reporting stations, these upper air weather observations are made available immediately to forecast offices for weather forecasting purposes, and the manuscript reports are collected at Meteorological Branch Headquarters for compilation of climatic statistics.

There are 1,366 weather observing stations in Canada classified as climatological stations where the observers record temperature extremes and precipitation once or twice daily and send in monthly data sheets. Most of the observers serve on a voluntary basis and willingly spend several hours a month on their hobby. In addition, many governmental and industrial organizations such as agricultural experimental farms and power companies have incorporated brief climatological duties into the general work of some of their employees. These climatological stations have contributed much useful information on temperature and precipitation for publication by the Meteorological Branch.

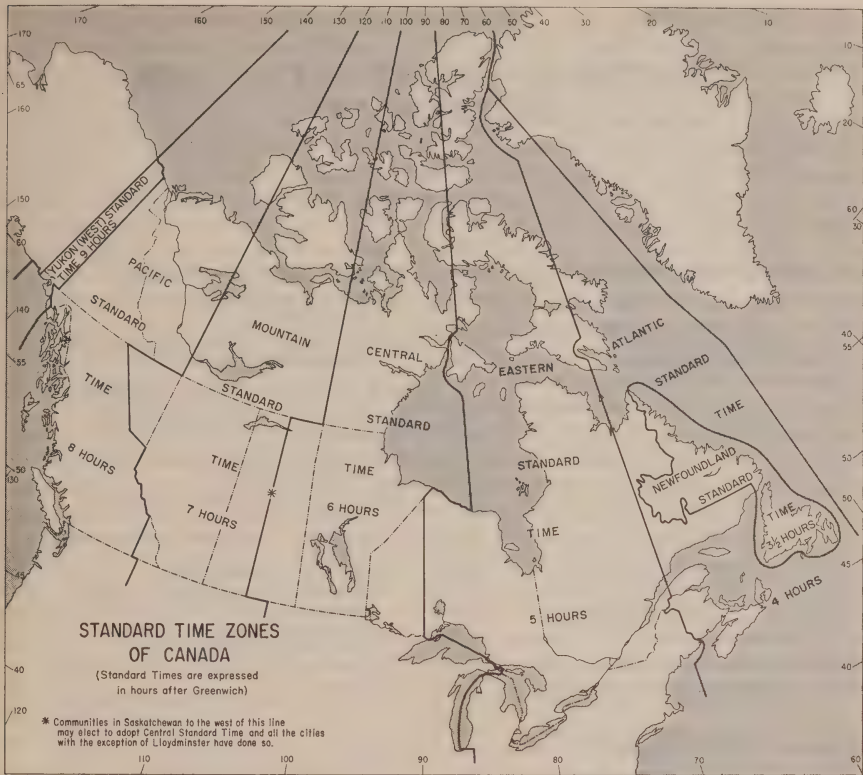

There are 574 stations classified as precipitation stations where rainfall and snowfall only are observed and recorded. Since precipitation varies more rapidly than temperature over short distances, a dense network of these stations is required, especially in large urban areas. Finally, there are 99 miscellaneous stations where observations of wind, sunshine and temperature are taken for special purposes. In all, the number of weather stations in Canada has been growing at an average rate of more than 100 a year for the past decade and thus a steadily increasing climatic intelligence is assisting Canadians in all economic pursuits.

Section 3.—Standard Time and Time Zones

Standard Time, which was adopted at a World Conference held at Washington, D.C., in 1884, sets the number of time zones in the world at 24, each zone ideally extending over one twenty-fourth of the surface of the earth and including all the territory between two meridians 15° of longitude apart. In practice, the zone boundaries are quite irregular for geographic and political reasons. Universal Time (UT) is the time of the zone centred on the zero meridian through Greenwich. Each of the other time zones is a definite number of hours ahead of or behind UT to a total of 12 hours, at which limit the international date-line runs roughly north-south through the mid-Pacific.

Canada has seven time zones, the most easterly being Newfoundland Standard Time, three hours and thirty minutes behind UT, and the most westerly Yukon (west) Standard Time, nine hours behind UT. In between, from east to west, the remaining zones are called Atlantic, Eastern, Central, Mountain, Pacific and Yukon (east). Yukon (east) and Pacific Standard in effect constitute a single zone.

Legal Authority for the Time Zones.—Time in Canada has been considered a matter of provincial rather than federal jurisdiction. Each of the provinces and the Northwest Territories has enacted laws governing the standard time to be used within its boundaries. These laws determine the location of the time zone boundaries. Lines of communication, however, have caused communities near the boundary of a time zone to adopt the time of the adjacent zone, and in most cases these changes are acknowledged by amendments to provincial legislation. During the two World Wars, there were federal enactments concerning time but these were of temporary duration. In 1941 the Dominion Observatory time was declared the time to be used for official purposes in Canada.

Daylight Saving Time.—Although Daylight Saving Time had been urged in many quarters before World War I, its first use in Canada came as a federal war measure in 1918. Today most of the provinces have legislation controlling the provincial or municipal adoption (or rejection) of Daylight Saving. In the remaining provinces it is necessary to refer to the individual municipalities to determine whether, and between what dates, Daylight Saving is adopted in any particular year.

PART I.—CONSTITUTION OF CANADA

The Canadian federal state, which today comprises ten provinces and two vast northern territories, had its beginning one hundred years ago in the enactment (Mar. 29, 1867) by the British Parliament of the British North America Act, 1867. Fashioned largely out of the Seventy-two Resolutions drafted at Quebec (1864) by the Fathers of Confederation, the British North America Act, 1867 provided for the federal union of the three British North American provinces (Canada, New Brunswick and Nova Scotia) in one Dominion under the name of "Canada".

* Except where otherwise indicated, the federal data in this Chapter have been brought up to the date of Sept. 30, 1967, the provincial data to June 30, 1967, and the Territorial data to Sept. 30, 1967. Certain changes occurring between those dates and the date of going to press will be found in an Appendix to this volume. Also, official appointments made up to the date of going to press will be found in Chapter XXVII (see Index).

Although the new nation that came into being on July 1, 1867 was a federation comprised of four provinces, namely, Ontario, Quebec, New Brunswick and Nova Scotia, Sect. 146 of the Act provided for the admission into the Union of the Crown colonies of Prince Edward Island and Newfoundland on the Atlantic and the united (1866) island and mainland colony of British Columbia on the Pacific, and also of the vast expanse of Hudson's Bay Company territory in the North West known as "Rupert's Land and the North-Western Territory". Following the negotiation of an agreement on terms comprising the Company's surrender of its authority and territories to the Crown (which was to transfer them at once to Canada) and the retention of one twentieth of the land of the fertile belt (the southern territories) with designated blocks of land around its trading posts and a Canadian cash payment of £300,000, the new nation of Canada was ready to expand westward with considerable momentum across the Continent to the Pacific.

The acquisition by Canada of Rupert's Land and the North-Western Territory enabled the Red River settlement, after a few months of disturbance, to receive limited provincial establishment under the name of "Manitoba" in 1870; provided the Federal Government with the public lands needed to help subsidize a transcontinental railway linking the Pacific with the Canadian East, thereby fulfilling the pledge to British Columbia to begin the Canadian Pacific Railway within two years and to complete it within ten years of the date of union, July 20, 1871; and laid, through the provision of millions of acres of public lands, the land and economic bases for the Federal Government's adoption of a free-homestead policy for the Canadian prairies that, in conjunction with the completion of the Canadian Pacific Railway and the launching of other railway lines, brought wave after wave of settlers into the Northwest Territories in such numbers as to justify the creation of the two Provinces of Saskatchewan and Alberta in 1905 out of the portion of the Northwest Territories south of the 60th parallel of north latitude. Although provision for their entry was included in the British North America Act, 1867, the Province of Prince Edward Island held back from the Union until 1873 and Newfoundland became Canada's tenth province on Mar. 31, 1949.

The Constitution of Canada, which had a corporate beginning in 1867, combines, in a set of rules determining the creation and operation of the machinery or institutions of government, the Cabinet system of responsible government (based on an inheritance from Britain) with a Canadian adaptation of federalism (as then practised in the United States for eighty years). A written document, the British North America Act of 1867, contains a substantial portion of Canada's Constitution and this Act, with its various amendments,* is popularly held to be the Canadian Constitution. There is, however, another and perhaps more important part which appears, through the evolutionary processes of historical growth, in various guises including well-established usages and conventions found in the unwritten provisions of the Constitution.

Thus, the British North America Act is not a comprehensive constitutional document presenting an exhaustive statement of fundamental laws and rules by which Canada is governed. The Constitution of Canada in its broadest sense includes other British statutes (such as the Statute of Westminster, 1931) and Orders in Council (notably those admitting various provinces and territories to the federation), Statutes of the Parliament of Canada relating to such matters as the succession to the Throne, the Royal Style and Titles, the Governor General, the Senate, the House of Commons, the creation of courts, the establishment of government departments, the franchise, elections, and also statutes of provincial legislatures relating to provincial constitutional institutions and government matters. Federal and provincial Orders in Council, legally authorized by their respective

* See *A Consolidation of The British North America Acts 1867 to 1960*, consolidated by Elmer A. Driedger as of Jan. 1, 1964. Queen's Printer, Ottawa. 75 cents (Catalogue No. YX1-164). A further amendment was made in 1964 respecting old age pensions (see p. 79).

statutes, provide further constitutional material as do the decisions of the courts which interpret the British North America Act and all ordinary statutes and indeed possess the power to set aside any laws which they hold to be *ultra vires* or beyond the jurisdiction of the enacting legislative bodies, whether federal or provincial. Moreover, the Canadian Constitution comprises, in addition to the statutory law and its judicial interpretation, substantial sections of the common law, unwritten constitutional usages and conventions and principles of democratic government which were transplanted from Britain over two hundred years ago and since then have been thriving and evolving in the Canadian environment. For example, the Cabinet system of responsible government (see pp. 73-74) and its functioning through close identification of the executive and the legislative powers (that is, of the Cabinet and the House of Commons) is not mentioned in the British North America Act but derives from an unwritten convention of the Constitution.

Although the essential principles of Cabinet government are based in custom or constitutional usage, the federal structure of Canadian government rests on the explicit written provisions of the British North America Act. Apart from the creation of the federal union, the dominant feature of the Act and indeed of the Canadian federation was the distribution of powers between the central or federal government on the one hand and the component provincial governments on the other. In brief, the primary purpose was to grant to the Parliament of Canada legislative jurisdiction over all subjects of general or common interest, while giving to the provincial legislatures jurisdiction over all matters of local or particular interest (see p. 79 and p. 97).

Unlike the written constitutions of many nations, the British North America Act lacks comprehensive "bill of rights" clauses, although it does accord specific constitutional protection to the use of the English and French languages (clause 133) and special safeguards with respect to sectarian or denominational schools. Such vital rights as freedom of speech, freedom of assembly, freedom of religion, freedom of the press, trial by jury and similar liberties enjoyed by the individual citizen are not recorded in the British North America Act but rather depend on the statute law and the common law inheritance. Security of these rights was confirmed by the passage of a Canadian Bill of Rights—An Act for the Recognition and Protection of Human Rights and Fundamental Freedoms (SC 1960, c. 44), assented to Aug. 10, 1960. (See also Chapter IX, Sect. 1 on Canadian Criminal Law and Procedure.)

Treaty-Making Powers.*—The Federal Government has exclusive responsibility for the conduct of external affairs as a matter of national policy affecting all Canadians. The policy of the Federal Government in discharging this responsibility is to seek to promote the interest of the entire country and of all Canadians of the various provinces within the over-all framework of the national policy.

In respect of matters of specific concern to the provinces of Canada, it is the policy of the Canadian Government, in a spirit of co-operative federalism, to do its utmost to assist the provinces in achieving the particular aspirations and goals that they wish to attain. The attitude of the Federal Government in this respect was illustrated by the "entente" signed by representatives of Quebec and France in the field of education in February 1965. The Quebec and federal authorities co-operated actively in a procedure

* Extracted from "The Provinces and Treaty-Making Powers", Appendix to *Votes and Proceedings of the House of Commons of Canada*, No. 8. Apr. 26, 1965.

that enabled the Province of Quebec, within the framework of the Constitution and the national policy, to participate in international arrangements in a field of particular interest to that province.

Thus, under existing procedures, the position is that, once it is determined that what a province wishes to achieve through agreements in the field of education or in other fields of provincial jurisdiction falls within the framework of Canadian foreign policy, the provinces may discuss detailed arrangements directly with the competent authorities of the country concerned. When a formal international agreement is to be concluded, however, the federal powers relating to the signature of treaties and the conduct of over-all foreign policy must necessarily come into operation.

The approach of the Canadian Government to the question of Canadian representation in international organizations of a social, cultural or humanitarian character reflects the same constructive spirit. It recognizes the desirability of ensuring that the Canadian representation in such organizations and conferences reflects in a fair and balanced way provincial and other interests in these subjects.

Amendment of the Constitution.—No provision was made in the British North America Act of 1867 for amendment thereof by any legislative authority in Canada but both the Parliament of Canada and the provincial legislatures were given legislative jurisdiction with respect to some matters relating to government. Thus, for example, the Parliament of Canada was given jurisdiction with respect to the establishment of electoral districts and election laws and the privileges and immunities of Members of the House of Commons and the Senate, and each provincial legislature was empowered to amend the constitution of the province except as regards the office of Lieutenant-Governor. By an amendment to the British North America Act passed in 1949, the authority of the Parliament of Canada to legislate with respect to constitutional matters was considerably enlarged and it may now amend the Constitution of Canada except as regards the legislative authority of the provinces, the rights and privileges of provincial legislatures or governments, schools, the use of the English or the French language, and the duration of the House of Commons other than in time of real or apprehended war, invasion or insurrection.

The question of devising amendment procedure within Canada which satisfies the need to safeguard or entrench such basic provincial and minority rights as are noted immediately above and yet possesses sufficient flexibility to ensure that the Constitution can be altered to meet changing circumstances is one that still engages the attention of the federal and provincial governments and legislatures. An outline of the constitutional background to the problem, an annotated list of the fourteen occasions since 1867 when amendments to the British North America Act were made by the United Kingdom Parliament, a concise review of the prolonged search for a satisfactory amending procedure in Canada—the subject of repeated consideration in the Parliament of Canada and in a series of formal federal-provincial conferences and meetings in the years 1927, 1935-36, 1950, 1960-61 and 1964—and, more specifically, the text of a draft Bill “to provide for the amendment in Canada of the Constitution of Canada” (accompanied by explanatory notes relating thereto) which embodies the amending procedure or formula unanimously recommended by the Conference of Attorneys-General and unanimously accepted by the Conference of the Prime Minister and the Premiers (October 1964) are all made available in an official publication entitled *The Amendment of the Constitution of Canada*, authorized by the Minister of Justice, February 1965.*

* Available from the Queen's Printer, Ottawa. \$2 (Cat. No. J2-1665).

¹ The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (SC 1912, c. 40).

² Extended by Quebec Boundaries Extension Act, 1912 (SC 1912, c. 45) and diminished Mar. 1, 1927 in consequence of the Award of the Judicial Committee of the British Privy Council whereby approximately 112,000 sq. miles of territory (formerly considered as part of Quebec) was assigned to Newfoundland.

³ Extended by the Extension of Boundaries Act of Manitoba, 1881 and the Manitoba Boundaries Extension Act, 1912 (SC 1912, c. 32).

⁴ Saskatchewan and Alberta created as provinces in 1905 from the area formerly comprised in the provisional districts of Assiniboia, Athabaska, Alberta and Saskatchewan established May 17, 1882 by minute of Canadian Privy Council concurred in by Dominion Parliament and Order in Council, Oct. 2, 1895.

⁵ By an Imperial Order in Council passed on June 23, 1870 pursuant to the Rupert's Land Act, 1868 (Br. Stat. 1868, c. 105), the former territories of the Hudson's Bay Company known as Rupert's Land and the North-Western Territory were transferred to Canada effective July 15, 1870. These territories were designated as the North-West Territories by the Act of SC 1869, c. 3 and as the Northwest Territories by RSC 1906, c. 62. By Imperial Order in Council of July 31, 1880 (effective Sept. 1, 1880), all British territories and possessions in North America not already included within Canada and all islands adjacent thereto (with the exception of the Colony of Newfoundland and its dependencies) were annexed to Canada and these additional territories were formally included in the North-West Territories by SC 1905, c. 27. The Province of Manitoba was formed out of a portion of the territories by the Manitoba Act, 1870 (SC 1870, c. 3) and a further portion was added to Manitoba in 1881 by SC 1881, c. 14. The Provinces of Alberta and Saskatchewan were formed out of portions of the territories in 1905 and in 1912 other portions were added to Manitoba, Ontario and Quebec.

⁶ By SC 1876, c. 21, a separate district to be known as the District of Keewatin was established and provision was made for the local government thereof. The Act was expressed to come into force by proclamation. It provided that portions of the District might be re-annexed to the North-West Territories by proclamation; in 1886 a portion of the District of Keewatin was re-annexed and in 1905 the entire Keewatin District was re-annexed. The Act of 1876 was never proclaimed. By Order in Council of May 8, 1882 the provisional districts of Assiniboia, Saskatchewan, Alberta and Athabaska were created for the convenience of settlers and for postal purposes. By Order in Council of Oct. 2, 1895 the further provisional districts of Ungava, Franklin, Mackenzie and Yukon were created. The boundaries of these provisional districts were re-defined by Order in Council of Dec. 18, 1897. Subsequently the Yukon Territory was formed, the Provinces of Alberta and Saskatchewan were created and other portions of the territories were annexed to Quebec, Ontario and Manitoba. By Order in Council dated Mar. 16, 1918 (effective Jan. 1, 1920) the remaining portions of the Northwest Territories were divided into three provisional districts known as Mackenzie, Keewatin and Franklin.

⁷ The provisional district of Yukon established in 1895 was created a judicial district of the North-West Territories by proclamation issued pursuant to Sect. 51 of the North-West Territories Act (RSC 1886, c. 50) on Aug. 16, 1897 and, by the Yukon Territory Act (SC 1898, c. 6), was declared to be a separate Territory.

PART II.—MACHINERY OF GOVERNMENT

Section 1.—The Federal Government

Canadian governmental machinery or institutions function through the application of the British North America Act and its amendments and those other constitutional principles and developments—both “written” and “unwritten”—that have evolved from the combination of British law and traditions with Quebec’s adherence to the French language and habits of mind, all within a New World transcontinental environment. They are classified into three branches—the Executive, the Legislature and the Judiciary—and exist for each of the three levels of government in Canada—federal, provincial and local—functioning within their respective jurisdictions as specified respectively by the provisions of the British North America Act and by their statutes of origin.

Despite this *division* of the Government of Canada into three separate branches, Canada’s system of responsible government was long ago evolved from the British practice of the *union* of the executive and legislative branches which is the antithesis of the United States system embodying the opposing principle of the division or *separation* of executive, legislative and judicial powers or authorities from one another. As recounted under the heading of The Cabinet (pp. 73-74), there is a close identification of the Canadian legislative and executive branches of government, with final direction and authority emanating from the former. The Prime Minister and his Cabinet, which formulates and carries out all executive policy, have seats in Parliament and are responsible at all times to the House of Commons and it is here that the *principle of the union* of powers finds its significant expression. On the other hand, the guarantee of the independence of the judiciary, whose superior court judges are appointed by the Governor General (in actual fact by the Prime Minister), is ensured in the constitutional provision that they shall hold office during good behaviour and can be removed by the Governor General only after a joint address of both Houses of Parliament; in this guarantee is found a limited acceptance of the principle of separation of powers, for judges cannot be removed because their decisions happen to be disliked by the Cabinet, by Parliament, or by the people; they can conscientiously perform their judicial functions without fear or intimidation.

In addition to the political institutions embraced by the executive and legislative branches, the machinery of the government at the federal level includes the non-political public service consisting of employees of the state organized in 24 departments of government, some two dozen special boards and commissions, and about 45 Crown corporations or other agencies engaged in administering various public services under their respective statutes and ultimately accountable, through a Minister, to Parliament. Part III of this Chapter recounts briefly the administrative functions of the Federal Government under four Sections, the first three describing the financial administration of the Government of Canada, the functions of each department, board, commission, and of each Crown corporation (whether classified as departmental, agency or proprietary under the Financial Administration Act) and the fourth listing the principal Acts of Parliament grouped according to the department charged with the administration thereof.

Current government organization and the delineation of the respective policies and administrative functions of the Ministers and their Departments are outlined at pp. 127-139 and presented visually in the accompanying government organization chart.

Subsection 1.—The Executive

The Crown.—The British North America Act of 1867 (Sect. 9) provides that “the Executive Government and authority of and over Canada is . . . vested in the Queen”. The functions of the Crown, which are substantially the same as those of The Queen in

relation to the British Government, are discharged in Canada by the Governor General in accordance with established principles of responsible government.

The Queen.—The personal participation of The Queen in the functions of the Crown in Canada has been limited to such occasions as the granting of honours and awards, approval of changes in the Table of Precedence, institution of new military awards, or the periodic appointment of a Governor General. On the occasion of a royal visit, The Queen may participate in those ceremonies that otherwise are carried out in her name, such as the opening and dissolution of Parliament, the assent to Bills and the granting of a general amnesty.

Apart from her constitutional position in relation to the various governments of the Commonwealth countries, The Queen is Head of the Commonwealth and symbolizes the association of the member countries. Until 1953 the title of The Queen was the same throughout the Commonwealth. Constitutional developments put the title somewhat out of accord with the facts of the position, and in December 1952 it was decided by the Prime Ministers of the Commonwealth countries meeting at London, England, that new forms of title for each country should be devised. The title for Canada was approved by Parliament and established by a Royal Proclamation on May 28, 1953. The title of The Queen, as far as Canada is concerned, now is:—

“Elizabeth the Second, by the Grace of God of the United Kingdom, Canada and Her other Realms and Territories Queen, Head of the Commonwealth, Defender of the Faith”.

1.—Sovereigns of Canada since Confederation, 1867

Name	Dynasty	Year of Birth	Date of Accession
Victoria.....	House of Hanover.....	1819	June 20, 1837
Edward VII.....	House of Saxe-Coburg and Gotha.....	1841	Jan. 22, 1901
George V.....	House of Windsor.....	1865	May 6, 1910
Edward VIII.....	House of Windsor.....	1894	Jan. 20, 1936
George VI.....	House of Windsor.....	1895	Dec. 11, 1936
Elizabeth II.....	House of Windsor.....	1926	Feb. 6, 1952

The Governor General.—The Governor General, appointed by The Queen as her personal representative in Canada on the advice of the Prime Minister of Canada, traditionally serves for a term of five years. He exercises the executive authority of The Queen in relation to the Government of Canada under Letters Patent issued under the Great Seal of Canada (revised and re-issued, effective Oct. 1, 1947) and the provisions of the British North America Acts, 1867 to 1964. Acting under the recommendations of his responsible Ministers, in The Queen's name, he summons, prorogues and dissolves Parliament, assents to Bills, and exercises other executive functions.

The Governor General's annual salary and allowances provided by the Parliament of Canada are \$48,666 and \$72,000, respectively. Office expenses and certain other items of expenditure are provided for in the estimates for the Office of the Secretary to the Governor General.

The present Governor General is styled His Excellency The Right Honourable Roland Michener, C.C.

2.—Governors General of Canada since Confederation, 1867

Name	Date of Appointment	Date of Assumption of Office
THE VISCOUNT MONCK OF BALLYTRAMMON.....	June 1, 1867	July 1, 1867
THE BARON LISGAR OF LISGAR AND BAILIEBOROUGH.....	Dec. 29, 1868	Feb. 2, 1869
THE EARL OF DUFFERIN.....	May 22, 1872	June 25, 1872

THE RIGHT HONOURABLE ROLAND MICHENER.....	Mar. 29, 1967	Apr. 17, 1967

The Cabinet.—The Cabinet is a committee of Ministers chosen by the Prime Minister (the leader of the political party forming the Government of the Day) generally from Members of Parliament. By convention, all members of the Cabinet either have seats in Parliament or secure seats within a short time and, again by convention, all Ministers in charge of departments of government are generally Members of the House of Commons although there is nothing in the Constitution to prevent a Minister with Portfolio being a Senator.* However, they generally prefer to have seats in the House of Commons where all crucial legislation, by convention, is introduced and where they can offer explanations necessary to secure passage of their Estimates or legislation with which they are deeply concerned. Ministers without Portfolio (without a department to administer)† can be members of either the House of Commons or the Senate. Frequently the Cabinet contains one Minister without Portfolio—usually the Leader of the Government in the Senate—and perhaps one or two others chosen for a variety of reasons such as the desirability of including certain provincial or sectional representation that might otherwise be lacking in the Ministry.

Cabinet members are selected by the Prime Minister in such manner as to ensure, as far as possible, representation of the several geographical and political regions of the country and its principal ethnic, religious and social interests. Each Cabinet Minister generally assumes charge of one of the departments of government, although a Minister may hold more than one portfolio at the same time or he may hold one or more portfolios and one or more acting portfolios, or a Minister without Portfolio may hold one or more acting portfolios. In his acting capacity, the Minister exercises the same authority as if he were the Minister of the department.

The position of Prime Minister, the keystone of the Cabinet, is one of exceptional authority. He alone makes recommendations on the dissolution and convocation of Parliament, appointment of Privy Councillors, Cabinet Ministers, Lieutenant-Governors, Chief Justices, Senators, Speakers of the Senate and House of Commons, and Deputy Heads of departments. The Cabinet, under his leadership, directs the business of the Commons, initiates nearly all public Bills placed before Parliament, and has complete

* Senator the Hon. Gideon Decker Robertson held the portfolio of Minister of Labour for the periods Nov. 7, 1918 to Dec. 29, 1921 and Aug. 7, 1930 to Feb. 2, 1932; Senator the Hon. Malcolm Wallace McCutcheon served as Minister of Trade and Commerce from Feb. 12 to Apr. 22, 1963.

† Ministers without Portfolio are at present referred to as Members of the Administration.

responsibility for the initiation of taxes and the recommendation of expenditures. Following established precedent or convention, it is always responsible to the Commons. When the Cabinet (the Government) loses the confidence of the House, it must either resign or request a dissolution from the Governor General. If it resigns, the Governor General may call on the Leader of the Opposition in the Commons to form a new Government. Alternatively, if a Government that has lost the confidence of the House is granted a dissolution and is defeated in the ensuing general election, then, should no clear majority be indicated, the Government may decide (1) to remain in office and seek a vote of confidence in the House when it meets or (2) to resign immediately with the consequent result that the Governor General will ask the leader of the party with the highest number of members returned to form a new Government. These alternatives may also eventuate as a result of a general election subsequent to the normal dissolution of Parliament at or near the close of its statutory life.

The primary responsibility of the Governor General in either of the above circumstances is to provide the nation with a Cabinet or Ministry capable of conducting Her Majesty's Government with the support of the House of Commons.

The Prime Ministers since Confederation are listed in Table 3 and the members of the Ministry as at Sept. 30, 1967 in Table 4. Sessional and other allowances received by Cabinet Ministers are given at pp. 88-89.

3.—Prime Ministers since Confederation, 1867

Ministry	Name	Length of Administration
1	Rt. Hon. Sir JOHN ALEXANDER MACDONALD.....	July 1, 1867 — Nov. 5, 1873
2	Hon. ALEXANDER MACKENZIE.....	Nov. 7, 1873 — Oct. 16, 1878
3	Rt. Hon. Sir JOHN ALEXANDER MACDONALD.....	Oct. 17, 1878 — June 6, 1891
4	Hon. Sir JOHN JOSEPH CALDWELL ABBOTT.....	June 16, 1891 — Nov. 24, 1892
5	Rt. Hon. Sir JOHN SPARROW DAVID THOMPSON.....	Dec. 5, 1892 — Dec. 12, 1894
6	Hon. Sir MACKENZIE BOWELL.....	Dec. 21, 1894 — Apr. 27, 1896
7	Rt. Hon. Sir CHARLES TUPPER.....	May 1, 1896 — July 8, 1896
8	Rt. Hon. Sir WILFRID LAURIER.....	July 11, 1896 — Oct. 6, 1911
9	Rt. Hon. Sir ROBERT LAIRD BORDEN.....	Oct. 10, 1911 — Oct. 12, 1917
10	Rt. Hon. Sir ROBERT LAIRD BORDEN.....	(Conservative Administration) Oct. 12, 1917 — July 10, 1920

Member of the Administration.....	Hon. CHARLES RONALD MCKAY GRANGER.....	Sept. 25, 1967	Sept. 25, 1967

¹ Changes occurring between Sept. 30, 1967 and the date of going to press will be carried in an Appendix to this volume.

Parliamentary Secretaries.—The Parliamentary Secretaries Act (SC 1959, c. 15), assented to June 4, 1959, provides for the appointment of 16 Parliamentary Secretaries from among the Members of the House of Commons to assist the respective Ministers in such manner as each Minister may direct. The Government thus revived the system of parliamentary assistantships in practice during the World War II and postwar years subsequent to 1943, whereby Cabinet Ministers might receive assistance in the performance of their parliamentary functions and promising Members of the House might secure a degree of apprenticeship for higher public office. Parliamentary Secretaries hold office for 12 months.

At Sept. 30, 1967, the following Parliamentary Secretaries were in office:—

<u>Secretary</u>	<u>Minister</u>
JOHN ROSS MATHESON.....	Prime Minister
BRUCE S. BEER.....	Agriculture
JACK DAVIS.....	Energy, Mines and Resources
DONALD S. MACDONALD.....	Secretary of State for External Affairs
GÉRARD PELLETIER.....	
RICHARD CASHIN.....	Fisheries
STANLEY HAIDASZ.....	Indian Affairs and Northern Development
BYRCE S. MACKASEY.....	Labour
JOHN C. MUNRO.....	Manpower and Immigration
MARGARET RIDEOUT.....	National Health and Welfare
JAMES E. WALKER.....	National Revenue
JOHN B. STEWART.....	Public Works
OVIDE LAFLAMME.....	Registrar General
ALBERT BÉCHARD.....	Secretary of State
JEAN-CHARLES CANTIN.....	Trade and Commerce
JAMES A. BYRNE.....	Transport

The Privy Council.—The British North America Act of 1867 (Sect. 11) provides for "a Council to aid and advise in the Government of Canada, to be styled the Queen's Privy Council for Canada . . .". At present it consists of about 115 members sworn of the Council by the Governor General on the advice of the Prime Minister. Membership in the Privy Council is for life so that Privy Councillors include both former and present Ministers of the Crown as well as a number of persons who have been, from time to time as an honour, sworn as Privy Councillors; these include members of the Royal Family, past and present Commonwealth Prime Ministers, and former Speakers of the Senate and of the House of Commons of Canada. The Council seldom meets as a body and its constitutional responsibilities as adviser to the Crown in respect to Canada are performed exclusively by a Committee; the membership thereof, with a few historical exceptions, is identical to that of the Cabinet of the Day. A clear distinction between the functions of the Committee of the Privy Council and the Cabinet is rarely made and actually the terms "Council" and "Cabinet" are commonly employed as synonyms.

5.—Members of the Queen's Privy Council for Canada According to Seniority Therein, as at Sept. 30, 1967

President of the Privy Council..... Hon. WALTER LOCKHART GORDON
 Clerk of the Privy Council and Secretary to the Cabinet..... R. G. ROBERTSON

NOTE.—In this list the prefix "Rt. Hon." indicates membership in the British Privy Council, except for the Rt. Hon. Roland Michener who is entitled to be so styled as Governor General of Canada.

Member ¹	Date When Sworn In	Member ¹	Date When Sworn In

¹ The ordinary legal limit of duration for each Parliament is five years. ² Duration of Parliament in years, months and days. The life of a Parliament is counted from the date of return of election writs to the date of dissolution, both days inclusive (BNA Act, Sect. 50). ³ Date of general election. ⁴ Writs returnable.

⁵ Dissolution of Parliament. ⁶ Includes long adjournment from Nov. 29, 1956 to Jan. 8, 1957. ⁷ Includes long adjournment from July 13 to Sept. 7, 1961. ⁸ Government defeated in House of Commons on want of confidence motion. ⁹ Includes long adjournment from Aug. 2 to Sept. 30, 1963. ¹⁰ Includes long adjournment from Dec. 18, 1964 to Feb. 16, 1965. ¹¹ House adjourned on June 30 until Sept. 27 but dissolved on Sept. 8, 1965. ¹² Includes long adjournment from June 30 to Sept. 27, superseded by dissolution on Sept. 8, 1965. ¹³ Includes 18-day Christmas adjournment, 11-day Easter adjournment, and two long adjournments totalling 70 days (July 14 to Aug. 29 and Sept. 9 to Oct. 5).

Subsection 2.—The Legislature

The federal legislative authority is vested in the Parliament of Canada consisting of The Queen, an Upper House styled the Senate, and the House of Commons. Bills may originate in either the Senate or the House subject to the provisions of Sect. 53 of the British North America Act, 1867, which provides that Bills for the appropriation of any part of the public revenue or the imposition of any tax or impost shall originate in the House of Commons. Bills must pass both Houses and receive Royal Assent before becoming law. In practice, most public Bills originate in the House of Commons, although there has been a marked increase recently in the introduction of public Bills in the Senate, at the instance of the Government, in order that Bills may be dealt with in the Senate while the Commons is engaged in other matters such as the debate on the Speech from the Throne. Private Bills usually originate in the Senate. The Senate may delay, amend or even refuse to pass Bills sent to it from the Commons, but differences are usually settled without serious conflict. (See Chap. XXVII for current legislation.)

Under Sect. 91 of the British North America Acts, 1867 to 1964, the legislative authority of the Parliament of Canada extends to the following: the amendment of the Constitution

of Canada (subject to certain exceptions—see p. 69); the public debt and property; the regulation of trade and commerce; unemployment insurance; the raising of money by any mode or system of taxation; the borrowing of money on the public credit; postal service; the Census and statistics; militia, military and naval service, and defence; the fixing of and providing for the salaries and allowances of civil and other officers of the Government of Canada; beacons, buoys, lighthouses and Sable Island; navigation and shipping; quarantine and the establishment and maintenance of marine hospitals; sea coast and inland fisheries; ferries between a province and any British or foreign country or between two provinces; currency and coinage, banking, incorporation of banks and the issue of paper money; savings banks; weights and measures; bills of exchange and promissory notes; interest; legal tender; bankruptcy and insolvency; patents of invention and discovery; copyrights; Indians and lands reserved for the Indians; naturalization and aliens; marriage and divorce; the criminal law, except the constitution of courts of criminal jurisdiction, but including the procedure in criminal matters; the establishment, maintenance and management of penitentiaries; such classes of subjects as are expressly excepted in the enumeration of the classes of subjects by these Acts assigned exclusively to the legislatures of the provinces.

Under Sect. 95, the Parliament of Canada may make laws in relation to agriculture and immigration concurrently with provincial legislatures although federal legislation is paramount in the event of conflict. By the British North America Act, 1951 (Br. Stat. 1950-51, c. 32) it is declared that the Parliament of Canada may make laws in relation to old age pensions in Canada but no such law shall affect the operation of any provincial laws in relation to old age pensions. By the British North America Act, 1964, which received Royal Assent on July 31, 1964, this amendment was extended at the request of the Parliament of Canada (June 19, 1964) to permit the payment of supplementary benefits, including survivors' and disability benefits irrespective of age, under a contributory pension plan.

The Senate.—From an original membership of 72 at Confederation, the Senate, through the addition of new provinces and the general growth of population, now has 102 members, the latest change in representation having been made on the admission of Newfoundland to Confederation in 1949. The growth of representation in the Senate is summarized by province in Table 7.

Senators are appointed by the Governor General by instrument under the Great Seal of Canada. The actual power of appointing Senators resides by constitutional usage in the Prime Minister whose advice the Governor General accepts in this regard. Until the passage of "An Act to make provision for the retirement of members of the Senate" (SC 1965, c. 4), assented to on June 2, 1965, Senators were appointed for life; that Act fixes at 75 years the age at which any person appointed to the Senate after the coming into force of the Bill will cease to hold his place in the Senate.

In each of the four main divisions of Canada except Quebec, Senators represent the whole of the province for which they are appointed; in Quebec, one Senator is appointed for each of the 24 electoral divisions of what was formerly Lower Canada. The deliberations of the Senate are presided over by a Speaker appointed by the Governor General in Council (in effect by the Government) and government business in the Senate is sponsored by the Government Leader in the Senate.

The Senate is not a competitor of the House of Commons in the field of legislation but, in the main, acts as a second chamber giving further scrutiny to legislation initiated in the House of Commons. Under the Constitution, Bills for appropriating any part of the public revenue or for imposing a tax or impost must originate in the Commons but in every other respect, since both Houses must concur in every piece of legislation, the Senate has an equal voice with the House of Commons.

The House of Commons.—The British North America Act, 1867 provided that in respect of representation in the House of Commons the Province of Quebec should have the fixed number of sixty-five members and that there should be assigned to each of the other provinces such a number of members as would bear the same proportion to the number of its population as the number sixty-five bears to the number of the population of Quebec. This Act also provided that on the completion of a census in 1871 and of each subsequent decennial census the representation of the several provinces should be re-adjusted provided the proportionate representation of the provinces as prescribed by the Act were not thereby disturbed.

In the session of 1946 the House of Commons adopted a resolution stating that the effect of the provisions of the British North America Act relating to representation had not been satisfactory in that proportionate representation of the provinces according to population had not been maintained and that a more equitable apportionment of members to the various provinces could be effected if readjustments were made on the basis of the population of all the provinces taken as a whole. The Act was amended accordingly in 1946 to provide a new rule to regulate representation in the House of Commons. Generally speaking, representation was fixed as follows:—

The membership assigned to each province shall be computed by dividing the total population of the provinces by two hundred and fifty-four and by dividing the population of each province by the quotient so obtained.

This rule, employed in the redistribution of representation made in 1947, was effective in the General Election of 1949.

After the completion of the 1951 Census it was apparent that, as a result of a wartime shift of population, a substantial reduction in the representation of the Province of Saskatchewan would ensue under the rules then regulating representation. Accordingly, in an effort to eliminate sharp reductions in provincial representation from one census to another, the British North America Act was again amended (RSC 1952, c. 304, Sect. 51) (see Canada Year Book 1963-64, p. 75) to ensure that the representation of any province should not be reduced by more than 15 p.c. at any one readjustment, subject however to the qualifications that the effect of the rule should not be to make the representation of a province with a smaller population greater than any province with a larger population.

Subsequently in 1952, Parliament enacted RSC 1952, c. 334, effective in the General Election of 1953 and in each successive General Election down to that of the Twenty-seventh Parliament (Nov. 8, 1965), which provided that representation in the House of Commons should be on the following basis:—

Sect. 2.—Eighty-five members of the House of Commons shall be elected for the Province of Ontario, seventy-five for the Province of Quebec, twelve for the Province of Nova Scotia, ten for the Province of New Brunswick, fourteen for the Province of Manitoba, twenty-two for the Province of British Columbia, four for the Province of Prince Edward Island, seventeen for the Province of Saskatchewan, seventeen for the Province of Alberta, seven for the Province of Newfoundland, one for the Yukon Territory and one for Mackenzie district of the Northwest Territories, thus making a total of two hundred and sixty-five members.

The number of representatives of each province elected at each of the 27 General Elections since Confederation is given in Table 9.

¹ By-elections held between Sept. 30, 1967 and the date of going to press will be carried in an Appendix to this volume.

Indemnities and Allowances.—Members of the Senate and House of Commons receive a sessional allowance at the rate of \$12,000 per annum. In addition, for each session of Parliament, they may be paid travelling expenses between their place of residence or constituency and Ottawa as may be required for the performance of their duties as members of the Senate and House of Commons. Senators receive an annual expense allowance of \$3,000 and members of the House of Commons receive an expense allowance of \$6,000, neither of which is subject to income tax, and is payable quarterly. The member of

the Senate occupying the recognized position as Leader of the Government in the Senate is paid, in addition to his sessional allowance, an annual allowance of \$10,000 and to the member of the Senate occupying the recognized position as Opposition Leader in the Senate there is paid, in addition to his sessional allowance, an annual allowance of \$6,000; but if the Leader of the Government is in receipt of a salary under the Salaries Act the annual allowance is not paid. The remuneration of the Prime Minister is \$25,000 a year and of a Cabinet Minister and the Leader of the Opposition in the House of Commons \$15,000 a year in addition to the sessional and expense allowances each receives as a member of Parliament. The remuneration of a Minister without Portfolio is \$7,500 a year in addition to the sessional and expense allowances, the latter being not taxable. Additional annual allowances of \$4,000 (beyond the above-noted sessional allowance) are provided to each Leader of a Party having a recognized membership of twelve or more persons in the House of Commons other than the Prime Minister and the member occupying the recognized position as Leader of the Opposition in the House of Commons and, likewise, to the Chief Government Whip and to the Chief Opposition Whip in the House of Commons. The Speaker of the Senate and the Speaker of the House of Commons each receives, besides the sessional allowance and expense allowance, a salary of \$9,000 per annum. The Deputy Speaker of the House of Commons receives a salary of \$6,000 per annum. The Speakers of the Senate and the House of Commons are also entitled to \$3,000 in lieu of residence and the Deputy Speaker of the House of Commons an allowance of \$1,500 in lieu of residence; these allowances are not taxable. The Deputy Chairman of Committees receives an annual allowance of \$4,000. Parliamentary Secretaries to the Ministers of the Crown receive an annual allowance of \$4,000 a year, in addition to their sessional and expense allowances. A motor vehicle allowance of \$2,000 is paid to each Minister of the Crown and to the recognized Leader of the Opposition in the House of Commons, and a motor vehicle allowance of \$1,000 is paid to the Speakers of the Senate and of the House of Commons; these allowances are not taxable.

A member of Parliament contributes, by reservation, 6 p.c. of his full sessional indemnity toward his retirement allowance, which is based on five twelfths of the total contributions, paid or elected to be paid; to the widow of an ex-member is paid three fifths of the allowance paid or payable to the ex-member at the time of his death. The maximum allowance payable to an ex-member is \$9,000 per annum and the maximum payable to the widow of an ex-member is \$5,400 per annum.

An Act to make provision for the retirement of members of the Senate (SC 1965, c. 4) entitles a Senator appointed after June 2, 1965 to become a contributor under the provisions of the Members of Parliament Retiring Act. Senators appointed prior to that date and who have not attained the age of 75 years, who elect under the provisions of this Act, are also entitled to become contributors. Under the provisions of the Retirement Act, a Senator contributes, by reservation, 6 p.c. of his sessional indemnity to the Consolidated Revenue Fund. A Senator appointed before June 2, 1965 who (a) within one year of attaining the age of 75 years resigns his place in the Senate or (b) resigns due to some permanent infirmity disabling him from performing his duties in the Senate, may be granted an annuity equal to two thirds of his sessional indemnity for life. The widow of a person granted such an annuity may receive an annuity equal to one third of the annuity to the ex-member of the Senate.

Every former Prime Minister who held office for four years will receive from the Consolidated Revenue Fund an allowance of two thirds of the annual salary provided for Prime Ministers under the Salaries Act, the allowance to commence when the former Prime Minister ceases to hold office, or attains the age of 70 years, whichever is the later, and to continue during his lifetime. The widow of a Prime Minister will receive an annual payment of one third of the allowance that was being paid or that would have been paid to her husband, where he dies without receiving the allowance, such allowance to commence immediately after the death of her husband and to continue during her natural life or until her remarriage. None of these allowances is payable while the recipient is a Senator or a member of the House of Commons.

The Federal Franchise.—The present federal franchise laws are contained in the Canada Elections Act (SC 1960, c. 39). The franchise is conferred upon all Canadian citizens or British subjects, men and women, who have attained the age of 21 years, are ordinarily resident in the electoral district on the date of the issue of the writ ordering an election and, in the case of British subjects other than Canadian citizens, have been ordinarily resident in Canada for twelve months prior to polling day at such election. Persons denied the right to vote are:—

- (1) the Chief Electoral Officer and the Assistant Chief Electoral Officer;
- (2) judges appointed by the Governor General in Council;
- (3) the returning officer for each electoral district;
- (4) persons undergoing punishment as inmates of any penal institution for the commission of any offence;
- (5) persons restrained of their liberty or deprived of the management of their property by reason of mental disease; and
- (6) persons disqualified under any law relating to the disqualification of electors for corrupt and illegal practices.

Prior to July 1, 1960, the list of persons denied the right to vote included "Indians ordinarily resident on an Indian reserve who were not members of His Majesty's Forces in World Wars I or II or who did not execute a waiver of exemption under the Indian Act from taxation on and in respect of personal property". Legislation proclaimed on the above-mentioned date confers upon all Indians who have attained the age of 21 years the right to vote at federal elections, without taking from them any of the rights and privileges to which they are entitled under the Indian Act. The Eskimos who are Canadian citizens possess the right to vote in federal elections, and the assumption of that right in the far-flung communities of the Canadian Far North has grown with Government establishment of electoral districts and polling facilities.

The Canadian Forces Voting Rules set out in Schedule II to the Canada Elections Act prescribe voting procedure for members of the Armed Forces of Canada and also for veterans in receipt of treatment or domiciliary care in certain institutions.

12.—Voters on the Lists and Votes Polled at the Federal General Elections of 1962, 1963 and 1965

NOTE.—Corresponding statistics for the General Elections of 1911, 1917, 1921 and 1925 are given in the 1926 Year Book, p. 82; those for 1926 in the 1945 edition, p. 66; those for 1930 and 1935 in the 1948-49 edition, p. 94; those for 1940 in the 1956 edition, p. 81; those for 1945 in the 1957-58 edition, p. 57; those for 1949, 1953 and 1957 in the 1962 edition, p. 71; and those for 1958 in the 1966 edition, p. 90.

¹ Each voter in the double-member constituency of Queens County, P.E.I., had two votes; in 1965, 26,250 voters on the list cast 44,895 votes.

² Each voter in the double-member constituency of Halifax, N.S., had two votes; in 1965, 124,633 voters on the list cast 184,153 votes.

³ Electoral District of Yukon.

⁴ Electoral District of Mackenzie River in 1962 and Electoral District of Northwest Territories in 1963 and 1965.

1965 Redistribution of Representation in The House of Commons.—The Representation Commissioner Act setting up the office and duties of the Representation Commissioner was given Royal Assent on Dec. 21, 1963. The Electoral Boundaries Readjustment Act providing for the establishment of Electoral Boundaries Commissions to report upon and to provide for the readjustment of the representation of the provinces in the House of Commons in accordance with the findings of the 1961 Census of Population was given Royal Assent on Nov. 20, 1964.

Pursuant to Sect. 11 of the Electoral Boundaries Readjustment Act, the Dominion Statistician sent to the Representation Commissioner a certified return showing the population of Canada and of each of the provinces and the population of Canada by electoral districts as ascertained by the 1961 Census. The Representation Commissioner calculated the number of members of the House of Commons to be assigned to each of the provinces subject and according to the provisions of Sect. 51 of the British North America Act, 1867, and the rules provided therein. He then caused a statement to be published in the *Canada Gazette* of Nov. 28, 1964, setting forth the following results:—

Eighty-eight members of the House of Commons shall be elected for the Province of Ontario, seventy-four for the Province of Quebec, eleven for the Province of Nova Scotia, ten for the Province of New Brunswick, thirteen for the Province of Manitoba, twenty-three for the Province of British Columbia, four for the Province of Prince Edward Island, thirteen for the Province of Saskatchewan, nineteen for the Province of Alberta and seven for the Province of Newfoundland.

The Governor General, by proclamation published in the *Canada Gazette*, established an Electoral Boundaries Commission for each province. It was the task of each Commission to prepare, with all reasonable dispatch, a report setting forth its recommendations concerning the division of its particular province into electoral districts and the recommendations concerning the description of the boundaries of each such district and the representation and name to be given thereto. A copy of the 1961 Census return was sent to the chairman of each Commission immediately after its members were appointed.

Pursuant to Sect. 8 of the Representation Commissioner Act, maps were prepared in the office of the Representation Commissioner showing the distribution of population in each province and setting out alternative proposals respecting the boundaries of electoral districts in each province; these maps were then supplied to the respective Commissions. The Commissions complied with the procedure of the Electoral Boundaries Act and completed their reports within the time prescribed, which was one year. Two certified copies of each report were received by the Representation Commissioner; as required by Sect. 19(1) of that Act, one of these copies was transmitted to the Speaker of the House of Commons, who in turn laid it before the House of Commons.

Then followed a period of thirty days in which objections in writing, signed by no fewer than ten members of the House of Commons, were filed with the Speaker specifying the provisions of the report objected to and the reasons for the objection. A further period of 15 days was set aside in which the House of Commons was to consider the matter of the objections: this period was increased to 45 sitting days by an Act, assented to on Feb. 23, 1966, entitled "An Act to extend the time for consideration of objections pursuant to section 20 of the Electoral Boundaries Readjustment Act with respect to the reports of commissions established for the decennial census taken in the year 1961".

Several objections were filed with the Speaker, the motions were taken up and considered and the reports referred back to the Representation Commissioner by the Speaker and then to the Commissions. On the expiration of a 30-day period for that purpose, the Commissions returned their reports with or without amendment, through the Representation Commissioner to the Speaker. Then a draft representation order was prepared by the Representation Commissioner to be transmitted to the Secretary of State. This order specified the number of members of the House of Commons who shall be elected for each of the provinces as calculated by the Representation Commissioner and, dividing each of the provinces into electoral districts, described the boundaries of each such district and specified the representation and name given thereto, in accordance with the recom-

mendations contained in the reports. The Governor in Council, by proclamation of June 16, 1966, declared the draft representation order to be in force, effective upon the dissolution of the then-existing Parliament.

At the subsequent election, according to the representation order set out in the Schedule to the Proclamation, 88 members of the House of Commons shall be elected for the Province of Ontario, 74 for the Province of Quebec, 11 for the Province of Nova Scotia, 10 for the Province of New Brunswick, 13 for the Province of Manitoba, 23 for the Province of British Columbia, four for the Province of Prince Edward Island, 13 for the Province of Saskatchewan, 19 for the Province of Alberta and seven for the Province of Newfoundland. In addition, one member each will be elected for the Yukon Territory and the Northwest Territories, making a total representation of 264 in the House of Commons.

Subsection 3.—The Judiciary

The Federal Judiciary

The Parliament of Canada is empowered by Sect. 101 of the British North America Act from time to time to provide for the constitution, maintenance and organization of a general Court of Appeal for Canada and for the establishment of any additional courts for the better administration of the laws of Canada. Under this provision, Parliament has established the Supreme Court of Canada, the Exchequer Court of Canada and certain miscellaneous courts.

Supreme Court of Canada.—This Court, first established in 1875 and now governed by the Supreme Court Act (RSC 1952, c. 259), consists of a chief justice, who is called the Chief Justice of Canada, and eight puisne judges. The chief justice and the puisne judges are appointed by the Governor in Council and they hold office during good behaviour but are removable by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and exercises general appellate jurisdiction throughout Canada in civil and criminal cases. The Court is also required to consider and advise upon questions referred to it by the Governor in Council and it may also advise the Senate or the House of Commons on private Bills referred to the Court under any rules or orders of the Senate or of the House of Commons.

Appeals may be brought from any final judgment of the highest court of final resort in a province in any case where the amount or value of the matter in controversy exceeds the sum of \$10,000. An appeal may be brought from any other final judgment with leave of the highest court of final resort in the province; if such court refuses to grant leave, the Supreme Court of Canada may grant leave to appeal. The Supreme Court may grant leave to appeal from any judgment whether final or not. Appeals in respect of indictable offences are regulated by the Criminal Code. Appeals from federal courts are regulated by the statute establishing such courts. The judgment of the Supreme Court of Canada in all cases is final and conclusive.

14.—Chief Justice and Judges of the Supreme Court of Canada, as at Oct. 6, 1967
(In order of seniority)

Name	Date of Appointment
Hon. Mr. JOHN R. CARTWRIGHT, Chief Justice of Canada.....	Sept. 1, 1967 ¹

Hon. Mr. Justice WISHART FLETT SPENCE.....	May 30, 1963
Hon. Mr. Justice LOUIS-PHILIPPE PIGEON.....	Oct. 6, 1967

¹ First appointed a Judge of the Supreme Court, Dec. 23, 1949.

Exchequer Court of Canada.—The Exchequer Court was first established in 1875 as part of the Supreme Court of Canada but is now a separate court governed by the Exchequer Court Act (RSC 1952, c. 98). The Court consists of a president and six puisne judges who are appointed by the Governor in Council. The president and the puisne judges hold office during good behaviour but may be removed by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and also at any other place in Canada where sittings may be fixed by the Court. The jurisdiction of the Court extends to cases where claims are made by or against the Crown in right of Canada. Proceedings against the Crown are taken by petition of right pursuant to the Petition of Right Act (RSC 1952, c. 210).

An appeal lies to the Supreme Court of Canada from any final judgment of the Exchequer Court in which the amount in controversy exceeds \$500; an appeal also lies with leave of the Supreme Court in certain cases where the amount in controversy does not exceed \$500 or where the judgment is not final.

The Exchequer Court also exercises admiralty jurisdiction in Canada. This was first conferred in 1891 by the Admiralty Act (SC 1891, c. 29) and is now governed by the Admiralty Act (RSC 1952, c. 1). Under this statute, the Exchequer Court is continued as a Court of Admiralty. The president and puisne judges of the Exchequer Court exercise admiralty jurisdiction throughout the whole of Canada. In addition, Canada is divided into various admiralty districts; a district judge in admiralty is appointed for each district. Appeals to the Supreme Court of Canada from judgments of the president or the puisne judges are governed by the general appeal provisions in the Exchequer Court Act. Appeals may be taken from a final judgment of a district judge in admiralty either to the Exchequer Court or direct to the Supreme Court of Canada.

Miscellaneous Courts.—*Railway Act.*—The Railway Act, 1903 (RSC 1952, c. 234) established the Board of Railway Commissioners for Canada as a court of record; by the Transport Act, 1938 (RSC 1952, c. 271) the name was changed to the Board of Transport Commissioners for Canada and by the National Transportation Act, 1967 (SC 1966-67, c. 69) to the Canadian Transport Commission. This court exercises jurisdiction with respect to railway matters. The Governor in Council is given jurisdiction to vary any order of the Board and an appeal lies from the Board to the Supreme Court of Canada upon a question of jurisdiction or a question of law.

Bankruptcy Act.—By virtue of Sect. 91(21) of the British North America Act, 1867, Parliament has exclusive legislative jurisdiction in relation to bankruptcy and insolvency. By the Bankruptcy Act (RSC 1952, c. 14) the superior courts of the provinces are constituted bankruptcy courts; original jurisdiction is conferred upon the trial courts and appellate jurisdiction is conferred upon the appeal courts of the provinces.

Income Tax Act and Estate Tax Act.—By the Income Tax Act (RSC 1952, c. 148) the Tax Appeal Board is established consisting of a chairman and not fewer than two or

more than four members with jurisdiction over appeals against income tax assessments. A further appeal may be taken to the Exchequer Court. Under the Estate Tax Act (SC 1958, c. 29) the Tax Appeal Board also has jurisdiction to hear appeals from assessments under that Act.

National Defence Act.—The Court Martial Appeal Court was established in 1959 by an amendment to the National Defence Act (SC 1959, c. 5). The judges of the Court are not fewer than four judges of the Exchequer Court of Canada designated by the Governor in Council and such additional judges of a superior court of criminal jurisdiction as are appointed by the Governor in Council. The Governor in Council designates one of the judges to be president of the Court. The Court hears appeals from courts martial respecting the legality of a finding of guilty on any charge and the legality of a sentence passed by a court martial. An appeal lies from the Court Martial Appeal Court to the Supreme Court of Canada on a question of law only.

Provincial and Territorial Judiciaries*

Certain provisions of the British North America Act govern to some extent the provincial judiciaries. Under Sect. 92(14) the legislature of each province exclusively may make laws in relation to the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction. Sect. 96 provides that the Governor General shall appoint the judges of the superior, district and county courts in each province, except those of the courts of probate in Nova Scotia and New Brunswick. Sect. 100 provides that the salaries, allowances and pensions of judges of the superior, district and county courts (except the courts of probate in Nova Scotia and New Brunswick) are to be fixed and provided by the Parliament of Canada and these are set out in the Judges Act (RSC 1952, c. 159 and amendments). Under Sect. 99, the judges of the superior courts hold office during good behaviour but are removable by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The tenure of office of district and county court judges is fixed by the Judges Act as being during good behaviour and their residence within the area for which the court is established.

All provinces have minor courts with limited civil and criminal jurisdiction, the presiding officers of which are appointed by provincial authority as, for example, justices of the peace, magistrates and juvenile court judges. Except in Quebec, there are county or district courts of each province with limited jurisdiction varying from \$500 to \$2,500 in amount. Each province has a superior court with virtually unlimited jurisdiction variously known as Court of Queen's Bench, Supreme Court, Superior Court, etc. There is also a Court of Appeal in each province.

The Yukon Act and the Northwest Territories Act each provide for a superior court of record in and for the Territory, called the Territorial Court, and consisting of one or more judges appointed by the Governor in Council. The judges of the Territorial Court of the Yukon Territory are ex officio judges of the Territorial Court of the Northwest Territories and vice versa. There is a Court of Appeal in each of the Territories. Police magistrates and justices of the peace have jurisdiction in minor civil and criminal cases.

Section 2.—Provincial and Territorial Governments†

In each of the provinces, The Queen is represented by a Lieutenant-Governor appointed by the Governor General in Council. The Lieutenant-Governor acts on the advice and with the assistance of his Ministry or Executive Council which is responsible to the Legislature and resigns office under circumstances similar to those described on p. 74 concerning the Federal Government.

* More detailed information concerning provincial judiciaries is given in the 1954 Year Book, pp. 48-55; a reorganization of the Supreme Court of Nova Scotia became effective Aug. 1, 1966.

† Except where indicated, the information given in this Section is brought up to June 30, 1967. Any important changes occurring between that date (or the date given) and the time of going to press will be found in an Appendix to this volume.

The Legislature of each province is unicameral, consisting of the Lieutenant-Governor and a Legislative Assembly, except for the Province of Quebec where there is a Legislative Council as well as a Legislative Assembly. The Legislative Assembly is elected by the people for a statutory term of five years but may be dissolved within that period by the Lieutenant-Governor on the advice of the Premier of the province.

The source of legislative authority of the Provincial Legislatures is the British North America Act, 1867 (Br. Stat. 1867, c. 3 and amendments). Under Sect. 92 of the Act, the Legislature of each province exclusively may make laws in relation to the following matters: amendment of the constitution of the province except as regards the Lieutenant-Governor; direct taxation within the province; borrowing of money on the credit of the province; establishment and tenure of provincial offices and appointment and payment of provincial officers; the management and sale of public lands belonging to the province and of the timber and wood thereon; the establishment, maintenance and management of public and reformatory prisons in and for the province; the establishment, maintenance and management of hospitals, asylums, charities and eleemosynary institutions in and for the province, other than marine hospitals; municipal institutions in the province; shop, saloon, tavern, auctioneer and other licences issued for the raising of provincial or municipal revenue; local works and undertakings other than interprovincial or international lines of ships, railways, canals, telegraphs, etc., or works which, although wholly situated within one province, are declared by the Federal Parliament to be for the general advantage either of Canada or of two or more provinces; the incorporation of companies with provincial objects; the solemnization of marriage in the province; property and civil rights in the province; the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction including procedure in civil matters in these courts; the imposition of punishment by fine, penalty or imprisonment for enforcing any law of the province relating to any of the aforesaid subjects; generally all matters of a merely local or private nature in the province.

Further, in and for each province the Legislature exclusively may, under Sect. 93, make laws in relation to education subject to certain restrictions relating to the establishment of schools by religious minorities. These powers with similar restrictions were conferred on the more recently admitted provinces on their inclusion in the federation.

The Provincial Legislatures may also make laws under Sect. 95 in relation to agriculture and immigration, subject to any laws of the Parliament of Canada in relation to these subjects.

Provincial Franchise.—Details regarding qualifications and disqualifications of the franchise are contained in the Elections Act of each province. In general, every person, male or female, at a specified age (18 to 21 years) who is a Canadian citizen or (in certain provinces) other British subject, who complies with certain residence requirements in the province and the electoral district of polling and who falls under no statutory disqualifications, is entitled to vote. Voting privileges are given to persons in Prince Edward Island, Quebec and Saskatchewan at the age of 18, in Newfoundland, Alberta and British Columbia at 19 years, and in the remaining provinces at 21 years.

Subsection 1.—Newfoundland

The Government of Newfoundland consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. The Legislative Assembly has 42 members elected for a term of five years. The Legislature elected Sept. 8, 1966 is the 34th in the history of Newfoundland and the 6th since Confederation.

Since the date of Confederation, Mar. 31, 1949, the province has had four Lieutenant-Governors: the Hon. Sir Albert Joseph Walsh commissioned Apr. 1, 1949; the Hon. Lt.-Col. Sir Leonard Outerbridge commissioned Sept. 5, 1949; the Hon. Campbell Macpherson commissioned Dec. 16, 1957; and the Hon. Fabian O'Dea commissioned Mar. 1, 1963. The first Ministry, formed on July 13, 1949 under the leadership of the Hon. Joseph R. Smallwood, was still in office on June 30, 1967.

The Premier receives a salary of \$10,000 and the other Cabinet Ministers \$9,000 per annum, plus a sessional indemnity of \$4,333.33 and a travelling and expense allowance of \$2,166.66. Each member of the House of Assembly receives a sessional indemnity of \$4,333.33 plus a travelling and expense allowance of \$2,166.66. An additional allowance of \$3,000 is made to the Leader of the Opposition.

15.—Legislatures of Newfoundland, 1949-67, as at June 30, 1967

Subsection 2.—Prince Edward Island

The Government of Prince Edward Island consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Lieutenant-Governors from Confederation (1873) to 1959 are cited in the 1960 Year Book, p. 105; since that date, the position has been held by the Hon. F. W. Hyndman, appointed effective Mar. 31, 1958, followed by the Hon. W. J. MacDonald, appointed effective Aug. 1, 1963.

The General Assembly elected May 30 and July 11, 1966 is the 51st in the history of Prince Edward Island Legislatures and the 26th since Confederation. It has 32 members from 16 electoral districts who may serve for a statutory term of five years. Each district elects one Councillor and one Assembly member. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 105. The Hon. Walter R. Shaw was Premier from Sept. 16, 1959 until the present Premier took office following the General Election of May 30, 1966.

The annual salary of the Premier is \$9,000, of a Cabinet Minister \$6,000 and of a Minister without Portfolio \$3,600. A member of the Assembly receives \$2,666.67 for each regular Session attended by him and an additional amount of \$1,333.33, tax-free, for travelling and other expenses incurred in connection with Session attendance and representing his district; the Speaker of the Assembly receives a further additional sum of \$1,000 and an additional amount of \$500, tax-free, for travelling and other expenses incurred in connection with his official duties for each Session; to cover like expenditures the Deputy Speaker receives a further additional sum of \$600 and an additional amount of \$300, tax-free, and the Leader of the Opposition a further additional sum of \$1,666.67 and an additional amount of \$833.33, tax-free. Payment for indemnity for travelling and other expenses incurred by a member of the Legislature, the Speaker, the Deputy Speaker and the Leader of the Opposition accrue from his election to the Legislature and are paid monthly. No sessional indemnity or expenses are paid for any special Session of the Legislature.

17.—Legislatures of Prince Edward Island, 1945-67, as at June 30, 1967

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 75; for 1924-35 in the 1938 edition, p. 110; and for 1936-43 in the 1963-64 edition, p. 82.

Subsection 3.—Nova Scotia

The Government of Nova Scotia consists of a Lieutenant-Governor, an Executive Council and a House of Assembly. Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 106; since that date the position has been held by Maj.-Gen. the Hon. E. C. Plow, commissioned to office Sept. 1, 1958, followed by the Hon. H. P. MacKeen, commissioned to office Mar. 1, 1963.

The Legislature has 46 members elected for a maximum term of five years. The Legislature elected May 30, 1967 is the 49th in Nova Scotia's history and the 26th since Confederation. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 107; the present Premier assumed office in 1956.

The Premier of the province receives a salary of \$12,000 per annum and each Cabinet Minister a salary of \$10,000 per annum and \$800 per annum as expenses of representation. Each member of the House of Assembly receives a sessional indemnity of \$4,000 and an allowance of \$2,000 for expenses incidental to the discharge of his duties. The Leader of the Opposition receives an allowance of \$7,200 and an \$800 representation allowance in addition to his sessional indemnity.

19.—Legislatures of Nova Scotia, 1945-67, as at June 30, 1967

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 76; for 1924-33 in the 1938 edition, p. 111; and for 1933-44 in the 1963-64 edition, p. 83.

¹ Mr. Stanfield resigned on Sept. 13, 1967 after being chosen as leader of the National Progressive Conservative Party; Hon. G. I. Smith succeeded him as Premier of Nova Scotia.

Subsection 4.—New Brunswick

The Government of New Brunswick has a Lieutenant-Governor, an Executive Council and a House of Assembly. Lieutenant-Governors since Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 108; since that date, the position has been held by the Hon. J. Leonard O'Brien, appointed June 6, 1958, followed by the Hon. John B. McNair, appointed June 9, 1965.

The Legislature elected Apr. 22, 1963 is the 45th in New Brunswick's history and the 18th since Confederation. It has 52 members who are elected for a statutory term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 108; the present Premier assumed office in 1960.

The Premier receives \$20,000 per annum in addition to the salary for any other portfolio he may hold. The salary of each Cabinet Minister is \$12,000 and the amount paid as indemnity to each member of the House of Assembly is \$5,000 plus an additional \$2,500 allowance for expenses. The Leader of the Opposition receives an additional \$8,000 and the Speaker receives an allowance of \$1,000 in addition to the regular indemnity.

21.—Legislatures of New Brunswick, 1945-67, as at June 30, 1967

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 77; for 1924-35 in the 1938 edition, p. 112; and for 1936-44 in the 1963-64 edition, p. 84.

¹ The Ministry following the General Election of Oct. 23, 1967 is given in an Appendix to this volume.

Subsection 5.—Quebec

The Government of Quebec consists of a Lieutenant-Governor, an Executive Council and a bicameral legislature—the Legislative Council and the Legislative Assembly. Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 109; since that date the position has been held by the Hon. Onésime Gagnon, commissioned to office Feb. 14, 1958, followed by the Hon. Paul Comtois, commissioned to office Oct. 6, 1961, and the Hon. Hugues Lapointe, commissioned to office Feb. 22, 1966.

The Legislative Council has 24 members nominated for life by the Lieutenant-Governor in Council. The Legislative Assembly has 108 elected members and, like the Legislative Council, has the power to bring forward Bills relating to civil and administrative matters and to the amendment or repeal of existing laws. A Bill to be approved by the Lieutenant-Governor must have received the assent of both Houses. Only the Legislative Assembly can bring forward a Bill requiring the expenditure of public money. The maximum life of a legislature is five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 110; the Hon. Jean Lesage became Premier in 1961 and the Hon. Daniel Johnson in 1966.

Each member of the Legislative Council and the Legislative Assembly receives a sessional indemnity of \$10,000, plus an expense allowance of \$2,000 to each Legislative Councillor and \$6,000 to each member of the Legislative Assembly. In addition to this sessional indemnity and allowance, the Premier receives an annual indemnity of \$16,000, an expense allowance of \$4,000 and a lodging allowance of \$2,000; Ministers with Portfolio each receive an annual indemnity of \$12,000 plus a \$3,000 expense allowance; Ministers without Portfolio each receive an indemnity of \$8,000 plus a \$3,000 expense allowance; the Speaker of the Legislative Assembly receives an indemnity of \$10,000, an expense allowance of \$2,000 and a lodging allowance of \$1,000 and the Deputy Speaker receives an indemnity of \$5,000 and an expense allowance of \$1,000; the Leader of the Opposition in the Assembly receives an indemnity of \$10,000, an expense allowance of \$3,000 and a lodging allowance of \$2,000; the Leader of the Government and the Leader of the Opposition in the Legislative Council each receive an additional sessional indemnity of \$2,000 plus a \$3,000 expense allowance.

23.—Legislatures of Quebec, 1945-67, as at June 30, 1967

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 78; for 1924-35 in the 1938 edition, p. 113; and for 1936-44 in the 1963-64 edition, p. 85.

Subsection 6.—Ontario

The Government of Ontario consists of a Lieutenant-Governor, an Executive Council and a House of Assembly. Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 112; since that date the position has been held by the Hon. Justice John Keiller Mackay, appointed effective Dec. 30, 1957, followed by the Hon. William Earl Rowe, appointed effective Mar. 1, 1963.

The House of Assembly, the single-chamber Legislature of the province, is composed of 108 members elected for a statutory term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 112; the Hon. John Parmenter Robarts became Premier on Nov. 8, 1961 upon the resignation of the Hon. Leslie M. Frost, Premier from May 4, 1949.

Besides the regular departments of government, the Niagara Parks Commission, the Ontario Municipal Board, The Hydro-Electric Power Commission of Ontario, the Ontario-St. Lawrence Development Commission, the Ontario Northland Transportation Commission, the Liquor Control Board, the Liquor Licence Board, the Hospital Services Commission and The Water Resources Commission have been created.

Under the provisions of the Legislative Assembly Act (RSO 1960, c. 208 as amended) each member of the Assembly is paid an annual indemnity of \$8,000 and an allowance for expenses at the rate of \$3,000 for every member of the Assembly representing an electoral district within the Municipality of Metropolitan Toronto and \$4,000 for every member representing any other electoral district. In addition, the Speaker receives a special indemnity at the annual rate of \$3,000 and an expense allowance of \$2,000; the Chairman of the Committee of the Whole a special indemnity at the annual rate of \$2,000; and the Leader of the Opposition a salary of \$12,000 per annum in addition to his indemnity as a member. Each member of the Cabinet having charge of a department receives the ordinary indemnity as a member of the Legislature in addition to his salary as a Minister of the Crown. The salary provided in the Executive Council Act for the Premier is \$16,000 and for a Cabinet Minister having charge of a department \$12,000. By the 1956 amendment, every Minister of the Crown in charge of a department, the Minister of the Crown who is a member of The Hydro-Electric Power Commission of Ontario, and the Leader of the Opposition receive a representation allowance of \$2,000 per annum. Each Minister without Portfolio, other than the Minister who is a member of The Hydro-Electric Power Commission, receives \$2,500 salary and \$1,000 representation allowance per annum.

26.—Legislatures of Ontario, 1945-67, as at June 30, 1967

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 79; for 1924-34 in the 1938 edition, p. 114; and for 1935-45 in the 1963-64 edition, p. 87.

¹ The Ministry following the General Election of Oct. 17, 1967 is given in an Appendix to this volume.

Subsection 7.—Manitoba

In addition to a Lieutenant-Governor, Manitoba has an Executive Council at present composed of 12 members and a Legislative Assembly of 57 members elected for a statutory term of five years. Lieutenant-Governors from Confederation (1870) to 1959 are cited in the 1960 Year Book, p. 113; since that date, the position has been held by the Hon. Errick F. Willis, sworn in on Jan. 15, 1960, followed by the Hon. Richard S. Bowles, appointed July 2, 1965. Premiers since Confederation are listed in the 1960 Year Book, p. 114.

The Premier of the province is paid a salary of \$18,000 per annum and each of the other members of the Cabinet \$15,000. Members of the Legislature are each paid a sessional indemnity of \$4,800 and a tax-free expense allowance of \$2,400 plus an allowance of \$20 a day for a period of 60 days continuous sitting including Saturdays and Sundays for members outside Metro Winnipeg who have to take board and lodging in Winnipeg during legislative sessions. The Leader of the Opposition is paid \$15,600 and the Speaker of the Legislature receives \$9,600 which is an amount equal to double the indemnity of an individual member.

28.—Legislatures of Manitoba, 1945-67, as at June 30, 1967

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 80; for 1924-36 in the 1938 edition, p. 115; and for 1937-45 in the 1963-64 edition, p. 88.

Subsection 8.—Saskatchewan

The Government of Saskatchewan consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Lieutenant-Governors from Confederation (1905) to 1959 are cited in the 1960 Year Book, p. 115; since that date the office has been held by the Hon. F. L. Bastedo, commissioned to office Jan. 27, 1958, followed by the Hon. Robert L. Hanbidge, commissioned to office Mar. 1, 1963.

The statutory number of members of the Legislative Assembly is 59, elected for a maximum term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 115; the Hon. W. S. Lloyd became Premier in 1961 and the Hon. W. R. Thatcher in 1964.

The Premier receives \$13,000 and each Cabinet Minister \$10,000 annually in addition to a sessional indemnity. The Leader of the Opposition receives \$10,000 plus an office allowance of \$12,000 per annum, the Speaker \$3,000 and the Deputy Speaker \$2,000. The

sessional indemnity of a member of the Legislature is \$4,000 together with an expense allowance of \$2,000. Each of the members for the three northernmost constituencies of Cumberland, Athabasca and Meadow Lake receives a \$4,335 sessional indemnity and a \$2,165 expense allowance.

30.—Legislatures of Saskatchewan, 1945-67, as at June 30, 1967

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 81; for 1924-34 in the 1938 edition, p. 116; and for 1935-44 in the 1963-64 edition, p. 89.

Subsection 9.—Alberta

The Government of Alberta is composed of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Lieutenant-Governors from Confederation (1905) to 1959 are listed in the 1960 Year Book, p. 116; since that date the office has been held by the Hon. J. Percy Page, commissioned to office Dec. 19, 1959, followed by the Hon. J. W. Grant MacEwan, commissioned in January 1966.

There are 65 members in the Legislative Assembly, elected for a maximum period of five years. Premiers since Confederation are listed in the 1960 Year Book, p. 117; the present Premier assumed office in 1943.

Each member of the Legislative Assembly (except the Speaker, the Deputy Speaker and the Leader of the Opposition) receives a sessional indemnity of \$3,600 plus \$1,800 expense allowance plus \$15 for each day during the session when the member is necessarily absent from his ordinary place of residence, both tax free. The Speaker's sessional indem-

nity is \$6,000 plus \$3,000 expense allowance, the Deputy Speaker's sessional indemnity is \$4,800 plus \$2,400 expense allowance, and the Leader of the Opposition's sessional indemnity is \$7,600 plus \$3,800 expense allowance. Each also receives \$15 for each day during the session when he is necessarily absent from his ordinary place of residence. The Premier, in addition to the sessional indemnity, receives \$16,000 and each of the other Ministers receives \$12,500.

32.—Legislatures of Alberta, 1945-67, as at June 30, 1967

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 82; for 1924-34 in the 1938 edition, p. 117; and for 1935-44 in the 1963-64 edition, p. 90.

Subsection 10.—British Columbia

The Government of British Columbia has a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Maj.-Gen. the Hon. George Randolph Pearkes, Lieutenant-Governor at June 30, 1967, was commissioned to office Oct. 12, 1960. Lieutenant-Governors from Confederation (1871) to 1959 are cited in the 1960 Year Book, p. 118.

The Legislative Assembly, elected for a statutory term of five years, has 55 members. Premiers from Confederation to 1959 are cited in the 1960 Year Book, p. 118; the present Premier assumed office in 1952.

Each member of the Executive Council and the Legislative Assembly receives a sessional allowance of \$5,000 and \$1,500 for expenses. There is also paid to each member a living allowance of \$1,000 and each member receives an allowance of 25 cents per mile of the distance between his place of residence and the city of Victoria, reckoning such distance, going and coming, according to the nearest mail route. Each member also receives an allowance of \$500 for telegraph and telephone expenses. In addition, the Premier receives a salary of \$20,000, each member of the Executive Council with a portfolio receives \$17,500 annually and each member of the Executive Council without portfolio receives \$6,000. The Leader of the Opposition receives a special allowance of \$7,500 for expenses, the Speaker receives a special allowance of \$7,500, and the Deputy Speaker a special allowance of \$2,500.

34.—Legislatures of British Columbia, 1945-67, as at June 30, 1967

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 83; for 1924-37 in the 1938 edition, p. 118; and for 1938-45 in the 1963-64 edition, p. 91.

Subsection 11.—Yukon Territory and Northwest Territories***Yukon Territory**

The Yukon was established as a separate territory in 1898 to meet a need for local government created by the influx of miners during the gold rush period. The Yukon Territory Act provided for a Commissioner and a Council of not more than six, all appointed by the Governor in Council. The Commissioner in Council was given legislative powers comparable to those held by the Lieutenant-Governor and the Legislative Assembly of the Northwest Territories. By 1902, five elected councillors had been added and in 1908 a fully elected Council of ten members was introduced. A population decline following the end of the gold rush was accelerated by enlistment during World War I and in 1919 the Council was reduced to three elected members. This remained the level of government until after World War II when population and economic activity again showed an increase, beginning with the building of the Alaska Highway. In 1960, the Council was increased to seven elected members and provision was made for the appointment of an Advisory Committee on Finance.

Basic Legislation.—A principal feature of territorial government is its very close constitutional and working relationship with the Government of Canada. Although the provinces and the Federal Government each have jurisdiction and powers allocated by the British North America Act, the authority of the Territorial Government is allocated only by federal legislation. The Yukon Act prescribes the structure of the executive, legislative and judicial branches of the Territorial Government and the scope of their authority; all residual matters remain under federal control. The Territory has fully representative but not responsible government. The Act has been amended to give increased authority to the Territorial Government and it provides that the number of subjects on which the Territorial Council can legislate may be increased by the Governor in Council. The Yukon Act also provides for the designation of the seat of government; Whitehorse, the single large community in the Territory, was so designated in 1953.

The Government Organization Act, 1966, which describes the responsibilities of the Department of Indian Affairs and Northern Development for the development of Northern Canada, is the other piece of basic legislation under which the Territorial Government operates. The Minister is responsible for the management of the natural resources (except game) and for the development of the North generally. Although he shares authority with the Governor in Council for directing the Commissioner in his duties, he is the effective link between the Territorial and Federal Governments.

The Executive.—The executive side of the Territorial Government is headed by a Commissioner appointed by the Federal Government. He is directed to administer the Government of the Territory under instruction from the Governor in Council or the Minister of Indian Affairs and Northern Development. In practice, the Commissioner is much more responsive to the wishes of his elected Council than the Act implies and he cannot spend any territorial funds which have not been voted by Council. There is also a growing body of other territorial legislation (ordinances) which requires the Commissioner to obtain Council approval for specific actions; actually he never acts on any major issue without consulting Council.

Because the Commissioner does not sit with Council, there is no formal integration of the executive and legislative functions of government at Council sessions. The most recent development toward bridging this gap was the formation of an Advisory Committee on Finance, provided for by the 1960 amendment to the Yukon Act. The Committee consists of three Members of Council appointed by the Commissioner on the advice of Council, with whom the Commissioner is required to consult in the preparation of his

* Prepared under the direction of the Deputy Minister, Department of Indian Affairs and Northern Development, Ottawa.

estimates of expenditures and appropriations. The Committee accompanies the Commissioner to Ottawa annually for discussion with the Minister of territorial estimates and any other major problems of the moment. By its own choice, Council has made membership on the Committee rotational by replacing one member each year.

The Yukon Act also provides for an Administrator to carry out the functions of the Commissioner in his absence. In practice, this responsibility is carried by an Executive Assistant to the Commissioner, a federal public servant. Below the Commissioner's office, the Territorial Public Service is organized into eight conventional administrative departments under the direction of the Commissioner; all are located in Whitehorse. Territorial Government administration is represented in outlying communities by a limited number of Territorial Agents who are concerned mainly with the sale of liquor and licences but most territorial services are administered from Whitehorse. Health facilities are administered mainly by the federal Department of Health and Welfare. Federal involvement in the operation of health services in the Territory stems from its responsibility for Indians and from practical administrative considerations. All schools are under the direction of the Territorial Department of Education with headquarters in Whitehorse. The Territorial Government has well-developed engineering and welfare services. The Territorial Public Service numbers about 800 persons, including some 200 school teachers and vocational school instructors.

Some administrative areas such as natural resources, which are the responsibility of the Department of Indian Affairs and Northern Development, are administered by federal public servants reporting through the Commissioner who, in addition to his territorial role, is also the Department's senior federal representative in the Territory. Because the Minister of Justice is the Attorney General of the Territory for purposes of the Criminal Code of Canada, the administration of justice in the Territory is still provided, at direct federal expense, by the Department of Justice and the Royal Canadian Mounted Police. In 1967, the Territory started a correctional system which is operated along the lines of a provincial penal service.

The Legislature.—The Legislative Council consists of seven members elected for a term of three years. Three of the members represent electoral districts located in or close to Whitehorse where about half of the some 15,000 residents of the Territory live. As in many other matters, a federal agency (Chief Electoral Officer) conducts the territorial elections as a free service to the Territory. Council normally meets in session twice each year. The first session commences in March and has as a major part of its work the voting of the main territorial estimates which have been prepared by the Commissioner and agreed to by its Advisory Committee on Finance and the Minister. The second session is usually called in November and special sessions can be held at any time. Main sessions last from one to two months and the debates are recorded verbatim and published under the title of *Votes and Proceedings*. The Commissioner calls Council into session and prorogues it; he sits with it only by invitation to explain or defend a proposed expenditure, draft legislation and policy papers which he has placed before Council. All sessions are presided over by a Speaker who is appointed by Council from among its members for the duration of each Council. The Yukon Act contains only a single oblique reference to the position of Speaker and gives him no specific responsibilities or authority. In practice, he conducts Council proceedings under Rules of Council which are an adaptation of Canadian parliamentary procedures. He sometimes represents Council on formal occasions but Council has not sought to increase the stature of this position, the origin of which is probably related to the large American element in the Territory during and following the gold rush period and its predilection for the form of government established in the United States. A Clerk of Council controls the administrative side of its proceedings.

The matters on which Council can legislate are not significantly fewer than those enjoyed by the provinces. The main exceptions concern natural resources. These are a responsibility of the Federal Government which has to provide the heavy investments in

transportation and other facilities needed to bring them into production. Most major policy matters are first placed before Council in the form of a Sessional Paper prepared by the Commissioner, and the draft legislation is then presented at the next session in the form of a Bill, although amendments to existing legislation may be processed concurrently with the Sessional Paper or without the assistance of this background information. Discussion is conducted usually with the Council resolved into Committee of the Whole when the Commissioner, heads of departments and outside specialists appear to give detailed information and advice on particular subjects. Bills are given three readings and require the assent of the Commissioner before they become law as Ordinances of the Territory. The Commissioner can reserve assent to legislation but rarely does so. As with provincial legislation, the Federal Government may disallow any Ordinance but within a longer period of two years. New Ordinances are published after each session, and as Consolidated Ordinances of the Yukon Territory which are usually revised every ten years.

The Judiciary.—Before it was created a Territory in 1898, the Yukon was designated as the Yukon Judicial District. The Yukon Act provides for a Territorial Court which consists of a single Judge of Superior Court rank and one Police Magistrate. Both are located in Whitehorse. There are 28 Justices of the Peace, appointed by the Governor in Council, at 13 locations in the Territory. The Judge of the Territorial Court of the Northwest Territories is *ex officio* Judge in the Yukon and vice versa. There is also a Special Court of Appeal consisting of the Chief Justices of British Columbia, the Justices of Appeal of British Columbia and the Judge of the Territorial Court of the Northwest Territories.

The Role of the Federal Government.—Direct federal involvement in the affairs of the Territorial Government extends from control of its constitution to responsibility for the operation of certain provincial-type services and for providing the bulk of its finances. The constitutional arrangement has been described, as have some of the federally operated provincial-type services, e.g., justice and law enforcement and the health services. Beyond these special services, the Federal Government provides the usual range of national services such as the operation of Canadian Broadcasting Corporation radio stations, mail delivery and mainline airports. Full assistance under all national welfare programs is available in the Territory. Even with special financial assistance in many particular areas, the low volume of local revenues falls far short of meeting the high cost of services provided by the Territorial Government. The Federal Government picks up this financial deficit through fiscal arrangements known as Federal-Territorial Financial Agreements. These agreements have a definite term, usually five years, and serve to both allocate the particular functions to be carried out in the Territory by each government and indicate the amount of federal financial assistance the Territorial Government will receive within the life of the agreement. The allocation of responsibility for providing a particular service is usually related to the ability of the Territorial Government to undertake the task. The amount of federal financial assistance given to the Territorial Government is simply the difference between the forecast of revenues available to the Territorial Government and the forecast of the cost of a reasonable level of services to be provided by that Government. In the process, the Territorial Government forgoes its authority to tax private and corporate incomes and to collect other corporation taxes and succession duties.

Setting aside special accounts such as housing loans and amortization of borrowings from the Federal Government for which individual arrangements are made, the Yukon Government in the year ended Mar. 31, 1967, spent over \$8,000,000 on operational account and another \$3,000,000 on capital account. Of the total expenditure of approximately \$11,000,000, the Territorial Government raised about \$2,700,000 locally and recovered another \$3,000,000 from the Federal Government via shared-cost programs. The remainder was provided by the Federal Government under its financial agreement with the Territory.

COMMISSIONER, COUNCIL AND COUNCIL STAFF OF THE YUKON TERRITORY
(as at Oct. 1, 1967)

Commissioner..... J. SMITH

Members of the Council—

Whitehorse South.....	J. F. DUMAS

Officers of the Council—

Territorial Secretary and Clerk of the Council.....	H. J. TAYLOR
Legal Adviser.....	(vacant)

Northwest Territories

The Temporary Government Act of 1869 was the first legislation by the Federal Government to establish government in the newly acquired Rupert's Land and North-Western Territory. However, functional territorial government really dates from the North-West Territories Act of 1875. The creation of the Provinces of Saskatchewan and Alberta in 1905 and the adjustment of the northern boundaries of the Provinces of Manitoba, Ontario and Quebec by 1912 pushed the Territories north of the 60th parallel. The 1905 legislation provided for a federally appointed Commissioner with wide executive and legislative powers and a Council of four but no Councillors were appointed for 16 years. In 1921 the Council was expanded to six members and, until 1946 when the first territorial resident was appointed, it was comprised entirely of senior federal officials.

Defence early warning systems, radio and greatly improved air transportation after World War II ended the extreme isolation of the North and pressures for improved territorial government soon followed. The main advances came with legislative changes in 1951 and 1952 when the Council membership was increased to eight, with three of these elected from the Mackenzie District. A fourth was added in 1954. At least two Council sessions were required to be held in a year; one in the Territories and all others at the seat of government in Ottawa. The subjects on which the Commissioner in Council could legislate were increased to approximate those of the provincial legislatures except that natural resources (other than game) were reserved to the Federal Government. A Territorial Court was established.

Recent Constitutional Developments.—Since the quickening of federal interest in the North in the 1950s, there have been concern and effort to arrange for a resident territorial government and to chart the course of its future development. The first action was taken in 1963 when it was proposed to divide the Northwest Territories into two territories to allow the residual "Mackenzie Territory" to have a resident administration and to advance more rapidly than the proposed "Nunassiat Territory" in the Eastern Arctic. While the disparity between the physical, economic and social conditions in the two areas was recognized, the draft legislation met strong opposition and the Bills did not survive beyond first reading and committee examination. However, an amendment to the Northwest Territories Act in 1966 created three new electoral districts in the Eastern Arctic and, for the first time, gave elected representation to all residents of the Territories. Also, at the ensuing election the first Eskimo was elected to the Territorial Council. A separate consolidated revenue fund was set up for the Territorial Government and wider powers in other areas of financial administration were introduced.

Meanwhile, in 1965, the Federal Government had appointed an Advisory Commission on the Development of Government in the Northwest Territories which travelled widely in the North to examine into the local needs for change. Following receipt of its recommendations in 1966, the Federal Government acted quickly to provide for a territorial administration resident in the Territories. Yellowknife was designated as the seat of territorial government and arrangements were begun to accommodate the Commissioner

and his staff in the new capital. In addition, plans have been announced for the transfer from federal to territorial control of the operational responsibility for the existing government services as quickly as the new territorial administration can assume these functions. This transfer is expected to take approximately two years in the Mackenzie District and somewhat longer in the Eastern Arctic where communications and other circumstances dictate a slower pace. Other recommendations made by the Commission are still under consideration.

Changes in Territorial Administration.—Unlike the Yukon Territory which has had its own public service since the turn of the century, the Government of the Northwest Territories, until recently, has been largely dependent upon the Federal Government for staff to implement its legislation and to operate its public services. This arrangement was dictated by circumstances as they existed after World War II. The Federal Government had a direct responsibility for the education and welfare of the large Indian and Eskimo populations and for the operation and support of the Territorial Government. Until 1963, the Deputy Minister of Northern Affairs (now Indian Affairs and Northern Development) was Commissioner, and the Northern Administration Branch of this Department was devoted to operating most government services in the Northwest Territories with federal public servants. This arrangement worked well, for the Deputy Minister could ensure that his wishes as Commissioner and those of his Council were carried out and that both the Department and the Territorial Government worked in unison.

In 1963, a full-time Commissioner was appointed and charged with building up a territorial administration located initially in Ottawa but to move into the Territories as soon as possible. A full-time Deputy Commissioner was appointed in 1965 and a territorial staff was gradually built up to administer the territorial finances and to conduct the Council sessions. Following the designation of the seat of government in the Territories, the Commissioner and his staff of about 50 territorial public servants moved to Yellowknife in September 1967. On arrival there, the Commissioner assumed full responsibility for the operation of the liquor system, which was already staffed by territorial contract employees, and for the game management service, for municipal affairs and for the issuing of all licences and the collecting of taxes. The schools, welfare, engineering and other administrative services continue to be operated by federal staff until they can be transferred to territorial status on a planned basis. The new resident Territorial Government is structured to carry out its administration through six main departments, each under the direction of a senior public servant reporting to the Deputy Commissioner.

Present Government Structure.—The Northwest Territories Act, 1952, as amended, provides for an executive, legislative and judicial structure. The Commissioner is the chief executive officer. He is appointed by the Federal Government and is responsible for the administration of the Territories under the effective direction of the Minister of Indian Affairs and Northern Development. In practice, all major policy decisions are taken on the advice of his Council and the Commissioner can spend funds only to the extent voted by Council. New revenue measures are subject to the approval of Council. Normally, the Commissioner obtains prior federal approval of proposed legislative and budgetary measures before submitting them to Council. There is a Deputy Commissioner who can act for the Commissioner in his absence and is the effective head of the territorial administration. Government services at the local level are still provided mainly by federal staff who are gradually being transferred to territorial status.

The Legislative Council of seven elected and five appointed members has a life of three years. It meets at least twice each year, usually in February and November, but other sessions can be convened by the Commissioner as required. The Commissioner presides over Council in Session and the Deputy Commissioner sits as an appointed member. Main sessions last three to five weeks. A Clerk of Council and a Legal Adviser provide the main administrative assistance and debates are recorded verbatim.

The Northwest Territories Act gives the Legislative Council authority to legislate in most "provincial" areas of government activity except for natural resources (other than game); these are reserved to the Federal Government which alone can provide the necessary development funds. Council is conducted under rules which are an adaptation of federal parliamentary procedure. Legislation (ordinances) must receive three readings and have the assent of the Commissioner. He can reserve assent but this is a rare occurrence and the Federal Government may disallow any ordinance within two years. The Commissioner proposes most legislation but private members' Bills are allowed except for money matters which are the prerogative of the Commissioner. Besides draft legislation, the Council gives considerable time to policy papers in which the Commissioner asks for advice or seeks authority to take a particular course of action.

There is a full system of courts in the Territories, consisting of a territorial court, a police magistrate and numerous justices of the peace to serve the widely scattered settlements. Certain provincial superior courts have concurrent jurisdiction and there is provision for a Court of Appeal. The Minister of Justice is the Attorney General of the Territories under the Criminal Code and the Department of Justice oversees the administration of justice in the Territories. The single Territorial Court is located at Yellowknife and goes on circuit to serve the northern and eastern portions of the Territories. The Judge of the Yukon Territorial Court is *ex officio* a judge of the court in the Northwest Territories. Law enforcement is provided by the Royal Canadian Mounted Police.

Continuing Federal Responsibility.—The Government Organization Act, 1966 charges the Minister of Indian Affairs and Northern Development with responsibility for the development of the North and for the general co-ordination of federal activities in the area. His responsibilities for the Territorial Government through the Northwest Territories Act have been described as has the operation of government services by the staff of his Department. Other Federal Government agencies, such as the Northern Health Service of the Department of National Health and Welfare and the Royal Canadian Mounted Police, are responsible for health and police services with the Territorial Government sharing their costs. The Department of Transport operates mainline airports throughout the whole of the North and the Canadian Broadcasting Corporation provides special shortwave northern broadcasts and maintains a growing number of local stations in the Territories. Federal cost-shared national assistance programs, within the competence of the Territorial Government, are available to it on the same conditions as to the provinces.

There are about 6,000 Indians and over 10,000 Eskimos in the Northwest Territories for whom the Federal Government has a special responsibility. Although there are no Indian reserves in the Territories, two treaties were entered into which established certain claims to land and certain other rights. As in the provinces, legislative authority with respect to Indians and lands reserved for Indians is vested exclusively in the Federal Government and this authority extends to Eskimos.

In addition to the many provincial-type services such as health and education operated by the Federal Government and for which the Territory pays in respect of residents other than Indians and Eskimos, it also provides extensive financial assistance to the Territorial Government under special federal-territorial financial agreements which have usually spanned a period of five years. These agreements serve both to allocate the financial responsibility of each government for the provision of services in the Territories and to fix the amount of the federal financial payments to the Territorial Government for the life of the agreement. At this stage of development, territorial revenues fall far short of meeting the expenditures of the Territorial Government. Under the financial agreements, all taxes on personal and corporate incomes, corporation taxes and succession duties are reserved to the Federal Government.

The amount of federal financial assistance to the Territories is increasing substantially as the Territorial Government assumes responsibility for additional services. Excluding special accounts such as housing loans and amortization of borrowings for which individual

arrangements are made, the Territorial Government during the year ended Mar. 31, 1967, spent about \$7,500,000 on operational account and almost \$4,400,000 on capital projects. Of these expenditures, approximately \$3,000,000 were provided from liquor profits, tax and licence revenues raised within the Territories and another \$1,700,000 from recoveries under federal cost-shared programs. The remainder was provided by the Federal Government as direct subsidies under the financial agreement. In addition, the Northern Administration Branch, Department of Indian Affairs and Northern Development, had direct expenditures of approximately \$37,500,000 for its operations connected mainly with the Northwest Territories which, in effect, were a charge against the true cost of governing the Territories.

Section 3.—Local Government*

Local government in Canada comprises all government entities created by the provinces and territories to provide services which they consider are better discharged through control at the local level than through that of the senior governments. Broadly speaking, local government provides protection to persons and property, public works, sanitation and waste removal, health, social welfare, education, recreation and community services for Canadians. In addition, local government, through the medium of government enterprises, may operate such facilities as transit, the supply of electricity and gas, telephone service and the like. Traditionally, the local administration of education has been kept separate from other forms of local government except in the Province of Alberta. The organization and administration of education is dealt with separately in this volume.

Although the establishment of many local government organizations antedates Confederation, the British North America Act of 1867 placed local government in Canada under the control of the provincial legislatures and this was subsequently extended to the territories when their governments were constituted in their present forms. The earliest form of local government, apart from the school board, was the municipality. The powers and responsibilities of municipalities are those delegated to them by statutes passed by their respective provincial or territorial legislatures. Some of these statutes apply to all municipalities within a province or territory, some to a certain type or group, and many to one municipality only.

The rapid and continuing urbanization of Canada since the Second World War and the demand for the provision of services in rural areas comparable to those obtainable in urban areas have placed great strains on local government. These strains have been

* Prepared in the Governments Division, Financial Statistics Branch, Dominion Bureau of Statistics.

aggravated by the inelasticity of the major local revenue source—the taxation of real property; at the same time the small populations of most municipalities have hindered their attempts to provide services which require economies of scale for efficient operation.

The provinces have taken a number of steps to assist local governments to meet these challenges. There has been a proliferation of special agencies, joint boards and commissions to provide certain services or parts of the services previously described for groupings of municipalities. Local government revenue has been supplemented by grants from the provinces, either made unconditionally or for specific purposes. Certain functions traditionally assigned to local government have been assumed in whole or in part by the provinces, the most notable example being the assumption of the responsibility for justice, health, welfare and education by the provincial government in New Brunswick. Besides encouraging the amalgamation of small units, the provinces have also established new levels of local government to discharge those functions that provide obvious examples of economies of scale. The establishment of the Municipality of Metropolitan Toronto in 1954 was followed by that of the Metropolitan Corporation of Greater Winnipeg in 1960. At present British Columbia is establishing regional districts which will provide local government throughout the entire province for the first time by the end of 1967. These regional districts, like the metropolitan governments, are superimposed on existing municipalities and have been made responsible for supplying services whose efficiency depends upon economies of scale which cannot be achieved by the individual municipalities. A very different program is under way in Newfoundland where the scattered population in the many outposts is being encouraged and assisted to move to larger and more viable settlements.

As previously stated, the major local revenue source available to local governments is the taxation of real property, supplemented in varying degrees by taxation of personal property and business. (Taxation of persons and tenants has now largely disappeared.) In three provinces municipalities may levy an amusement tax, in three they may impose sales taxes on specific commodities. Miscellaneous general revenue is derived from licences, permits, rents, concessions, franchises and fines. A great many municipalities operate enterprises which sometimes provide surplus funds that may become available to help pay for other municipal services. On the other hand, expenditures of municipalities often include provision for the deficits of their enterprises.

Since a description of all forms of local government would be too complex for easy comprehension, the following paragraphs describe only municipal organization in each province and in the territories as at Jan. 1, 1967. Table 36, which gives the total number of each type of municipality in each province and territory, shows separately the number of all fully incorporated cities, towns, villages, and county and regional municipalities as well as municipalities in Census Metropolitan Areas. It should be noted that the five new "borough" municipalities of Metropolitan Toronto have been included in the count of "cities". Municipalities in Quebec functioning under the name of "Ville de", such as Ville de Montréal and Ville de Laval, which are incorporated as cities, have been counted according to their incorporation.

Newfoundland.—The Province of Newfoundland has two cities—St. John's and Corner Brook. A number of the province's many settlements have been organized into 62 towns, four rural districts, 10 local improvement districts and 74 local government communities. The towns, rural districts and local improvement districts operate under the Local Government Act; towns and rural districts have elected councils and local improvement districts have appointed trustees. Local government communities established under the Community Councils Act in the smaller settlements have limited powers and functions. There are no rural municipalities in the usual sense. Only about one fifth of 1 p.c. of the total area is municipally organized. Municipalities are supervised by the Department of Municipal Affairs and Housing.

Prince Edward Island.—In this province, one city and seven towns have been incorporated under special Acts and 21 villages have been established under the Village Services Act. There is no municipal organization for the remainder of the province although it is divided into school sections which have elected school boards.

Nova Scotia.—Municipal organization in Nova Scotia covers the whole of the province. The three cities operate under special charters and special legislation. Thirty-nine towns operate under the Town Incorporation Act but there are no municipalities incorporated as villages. Cities and towns are independent of counties. The rural area is divided into 18 counties which, in themselves, do not represent units of local government. However, 12 of these counties each comprise one municipality and the other six each comprise two municipalities, making a total of 24 rural municipalities. Supervision of municipalities is exercised through the Department of Municipal Affairs.

New Brunswick.—This province, as already noted, was fully reorganized as at Jan. 1, 1967. The 15 counties were dissolved and the structure is now comprised of six cities, 21 towns and 78 villages. In addition, there are local service districts but these are not municipal organizations and are excluded from this count. The remainder of the province not municipally organized is administered by the Government of New Brunswick; municipalities are administered by the Department of Municipal Affairs.

Quebec.—Municipal divisions in Quebec embrace the more thickly settled areas comprising about one third of the province and the remainder is governed by the province as 'territories'. The organized area is divided into 74 county municipalities which are divided again into local municipalities and designated as village, township or parish municipalities or simply as municipalities. The counties as such have no direct powers of taxation. Funds to finance the services falling within their jurisdiction are provided by the municipalities forming part thereof. Parts of some counties are not yet organized into incorporated units of local government, being in outlying areas and having little or no population. There are 309 villages and 1,101 townships and parishes. A small number of these are independent of the counties in which they are located. The Municipal Code governs local municipalities and the 66 cities and 178 towns have special Acts. The supervision and assistance of municipalities is through the Department of Municipal Affairs and the Quebec Municipal Commission. Municipal statistics are gathered by the Quebec Bureau of Statistics.

The active functions of the Montreal Metropolitan Corporation are limited because of the ability of the area municipalities to fulfil their own obligations. The Corporation services borrowings contracted before Apr. 1, 1961, when the Montreal Metropolitan Boulevard became a provincial responsibility, and apportions costs incurred in the area municipalities for streets constructed on each side of the Boulevard.

Ontario.—Slightly more than one tenth of the area of Ontario is municipally organized and the remainder is governed entirely by the provincial government. The older settled section of the province is divided into 43 counties, five of which are united with others for administrative purposes. Each county, although it is an incorporated municipality, is comprised of the towns, villages and townships situated within its borders. The local municipal organization is comprised of one metropolitan municipality, five boroughs, 33 cities, 155 towns, 158 villages, 571 townships and 18 improvement districts. Some municipalities are located in the northern districts which are not organized into counties. Supervisory control of municipalities is exercised by the Department of Municipal Affairs and the Ontario Municipal Board under the Municipal Act and other Acts governing aspects of municipal government.

The Municipality of Metropolitan Toronto, in existence since Jan. 1, 1954, encompasses one city and five boroughs. The Metropolitan Council is composed of the mayor, two senior controllers and the senior alderman of each of the nine wards of the City of Toronto and, for the five boroughs, the mayors, 13 controllers and two aldermen either designated by virtue of office or appointed by local councils. The chairman is elected by the councillors and need not be a councillor of an area municipality. The Council has jurisdiction over assessments, water supply, sewerage works, metropolitan road systems, transit, municipal housing developments, community planning, parks and recreation areas, the Court House, certain health and welfare services and the correlation of educational facilities in the metropolitan area. It also controls a unified metropolitan police force and a metropolitan licensing commission. In 1967 additional responsibilities were assumed respecting libraries, garbage disposal sites, low rental housing, welfare assistance and ambulance service. Expenditures are financed by a levy apportioned among the area municipalities. All borrowing of the area municipalities for capital purposes is done by the Municipality of Metropolitan Toronto.

Manitoba.—Manitoba has nine cities, which derive their powers from special Acts and do not come under the supervision of the Department of Municipal Affairs. The Department supervises the 36 towns, 41 villages and 110 rural municipalities under the Municipal Act. There are 18 local government districts in settled areas not within municipalities where the province has placed a resident administrator to carry out the functions of a municipal council. The unorganized areas are the direct responsibility of the provincial government.

The Metropolitan Corporation of Greater Winnipeg has been in existence since Nov. 1, 1960. Its council is separate and distinct from those of the 16 area municipalities. The councillors are elected as individuals from ten districts, each containing approximately the same number of voters. The council has jurisdiction over planning, zoning, land development, assessments, arterial roads, water supply, sewage disposal, transit and other services. It borrows money only for its own undertakings and leaves to its area municipalities the responsibility for welfare, police, fire protection and other services. Expenditures are financed by a proportion of the business and other taxes levied on industrial or commercial property by the area municipalities and by a uniform levy on the equalized assessment of all taxable real property in the area municipalities.

Saskatchewan.—All municipalities in Saskatchewan derive their powers from general Acts that are designated with the name of the type of municipality. There are 11 cities, 125 towns, 364 villages and 295 rural municipalities. The area so organized consists of most of the southern two fifths of the province; the remainder of this portion is administered for local purposes by the province in 11 unincorporated local improvement districts. The northern three fifths is sparsely populated and without local government, except for the corporation of Uranium City and District, although some municipal services are provided by the province through operation of the Northern Administration District. Municipalities are supervised by the Department of Municipal Affairs.

Alberta.—The whole Province of Alberta is under some type of municipal organization. The province has an Act applying to each type of municipality and under these Acts the Department of Municipal Affairs supervises the nine cities, 99 towns, 167 villages, 21 municipal districts and 28 counties. The latter administer schools as well as municipal services. Municipal government for the 45 improvement districts is provided by the Department of Municipal Affairs.

British Columbia.—As already noted, the Government of British Columbia commenced instituting regional government in the province with the intent of having the whole province organized municipally by the end of 1967. As at Jan. 1, 11 such regional

¹ Municipalities grouped according to their official nomenclature, which is roughly indicative of size and nature, devised by the Dominion-Provincial Conferences on Municipal Statistics designed to bring municipalities into comparable groups for statistical presentation. ² The five boroughs in Metropolitan Toronto are included with "Cities". ³ The nature and number of the various forms of "Other local municipalities" are given in the text preceding this table, under provincial headings. ⁴ Other local municipalities

districts had been established. There are 32 cities, 12 towns, 56 villages and 39 districts; the latter are mostly rural municipalities although there are some districts adjacent to the principal cities of Victoria and Vancouver that are largely urban in character. It should be emphasized, however, that in British Columbia the application of the name 'city' is somewhat different from the commonly accepted meaning; because of their small size, perhaps one half or more of the 32 cities would not normally be incorporated as such in another province. Municipalities are supervised by the Department of Municipal Affairs.

In addition to the above types of municipalities, there are unincorporated improvement districts that have been set up to provide certain municipal services such as protection, waterworks, irrigation, etc. These districts are under the supervision of the Department of Lands, Forests, and Water Resources.

Yukon and Northwest Territories.—In Yukon Territory there are two cities (Whitehorse and Dawson) and one unincorporated town (Mayo). In the Northwest Territories there are two towns (Yellowknife and Hay River), one village and two local improvement districts.

Section 4.—Federal and Provincial Royal Commissions

Federal Royal Commissions Established.—Royal Commissions established from July 1, 1966 to June 30, 1967 under Part I of the Federal Inquiries Act are given here in continuation of those previously reported in the Year Books beginning with the 1940 edition, pp. 1108-1110. Any Commission established between June 30, 1967 and the date of going to press will be found in the Register of Official Appointments, Chapter XXVII, Part III.

<u>Nature of Commission</u>	<u>Chief Commissioner</u>	<u>Date Established</u>
To inquire into the costs of farm machinery and repair parts.	Dr. C. BARBER.....	May 26, 1966
To inquire into the operation of Canadian Security methods and procedures.	M. W. MACKENZIE.....	Nov. 16, 1966
To inquire into the status of women in Canada.	Mrs. JOHN BIRD.....	Feb. 16, 1967

Reports of Federal Royal Commissions.—Reports of Federal Royal Commissions issued during the period July 1, 1966 to June 30, 1967 were as follows:—

Report of Commission of Inquiry into working conditions in the Post Office Department, established Sept. 1, 1965. Ottawa, 1966. 363 p. \$1. (Cat. No. Z1-1965/2).

Report of Commission of Inquiry into matters relating to one Gerda Munsinger, established Mar. 14, 1966. Ottawa, September 1966. 93 p. \$1. (Cat. No. Z1-1966/2).

Report of Commission of Inquiry re the Hon. L. A. Landreville, established Jan. 19, 1966. Ottawa, 1966. 133 p. \$1. (Cat. No. Z1-1966/3).

Report of Commission of Inquiry into complaints made by George Victor Spencer, established Mar. 7, 1966. Ottawa, 1966. 60 p. 50c. (Cat. No. Z1-1966/1).

Report of the Royal Commission on Taxation, established Sept. 25, 1962. Ottawa, 1966.

Vol. 1, Introduction, acknowledgment and minority reports. 138 p. \$1.75. (Cat. No. Z1-1962/1-1ad).

Vol. 2, Use of the tax system to achieve economic and social objectives. 353 p. \$3.75. (Cat. No. Z1-1962/1-2ad).

Vol. 3, Taxation of income: Part A—Taxation of individuals and families. 685 p. \$7. (Cat. No. Z1-1962/1-3ad).

Vol. 4, Taxation of income (continued): Part B—Taxation of income flowing through intermediaries; Part C—Determination of business income; Part D—International. 848 p. \$8.75. (Cat. No. Z1-1962/1-4ad).

Vol. 5, Sales taxes and general tax administration: Part A—Sales and excise taxes and duties; Part B—General tax administration. 248 p. \$2.75. (Cat. No. Z1-1962/1-5ad).

Vol. 6, Implications of the proposed tax reforms. 304 p. \$3.25. (Cat. No. Z1-1962/1-6ad).

Consolidated index. 119 p. Free with complete set. (Cat. No. Z1-1962/1-7ad).

Provincial Royal Commissions.—The following provincial Royal Commissions were established during the period July 1, 1966 to June 30, 1967:—

<u>Province and Nature of Commission</u>	<u>Chief Commissioner or Chairman</u>	<u>Date Established</u>
PRINCE EDWARD ISLAND		
To inquire into the establishment and future development of two industries—Bathurst Marine Ltd. and Gulf Gordon Foods Ltd.	His Hon. Judge C. St. CLAIR TRAINOR.....	Dec. 30, 1966
NOVA SCOTIA		
To inquire into gasoline prices.....	H. A. RENOUF.....	Dec. 29, 1966
QUEBEC		
To inquire into health and social welfare services.	CLAUDE CASTONGUAY.....	Nov. 9, 1966
To study present problems concerning the implementation of criminal and penal laws in this province.	YVES PRÉVOST.....	Jan. 24, 1967
ONTARIO		
*To inquire into, report upon, and make recommendations concerning the Workmen's Compensation Act, on subjects other than detail administration.	Hon. GEORGE A. MCGILLIVRAY....	June 14, 1966
To inquire into and report upon all matters relating to the education and regulation relevant to the practice of the healing arts.	IAN R. DOWIE.....	July 14, 1966
To inquire into the means of enforcement of the rights, duties, obligations and liabilities of employees and employers, individually and collectively, and of trade unions and their members, individually and collectively, etc., to report thereon and make recommendations.	Hon. IVAN C. RAND.....	Aug. 18, 1966
To inquire into and report upon allegations made by Dr. Morton P. Shulman, of the Municipality of Metropolitan Toronto, against the Government of Ontario and certain senior civil servants of the Department of the Attorney General for Ontario.	Hon. WILLIAM DICKENS PARKER..	Apr. 13, 1967
MANITOBA		
Prairie Provinces Price Inquiry Commission..	Her Hon. Judge MARY J. BATTEN.	Dec. 14, 1966
SASKATCHEWAN		
Royal Commission on Rising Prices and Increases in the Cost of Living in the Prairie Provinces.	Her Hon. Judge MARY J. BATTEN.	Dec. 7, 1966
ALBERTA		
Juvenile Delinquency.....	F. H. QUIGLEY.....	Sept. 27, 1966
Mechanics Lien Act.....	His Hon. Judge (retired) N. V. BUCHANAN.....	Oct. 18, 1966
Members of Executive Council Conflict of Interest.	Hon. Mr. Justice W. J. C. KIRBY..	May 11, 1967
BRITISH COLUMBIA		
To inquire into invasion of privacy.....	R. A. SARGENT.....	Jan. 3, 1967

* Appointed prior to July 1, 1966 but omitted from list published in the 1967 Year Book.

PART III.—ADMINISTRATIVE FUNCTIONS OF THE FEDERAL GOVERNMENT

Section 1.—Financial Administration*

The financial affairs of the Government of Canada are administered and controlled under the fundamental principles that no tax shall be imposed and no money shall be spent without the authority of Parliament and that expenditures shall be made only for the purposes authorized by Parliament. The most important constitutional provisions relating to Parliament's control of finances are contained in the British North America Act; this Act provides that all federal taxing and appropriating measures must originate in the House of Commons and all requests for grants must come from the Crown through responsible Ministers, and for such requests the Government is solely responsible. In practice, financial control is exercised through a budgetary system based on the principle that all the financial needs of the Government for each fiscal year be considered at one time so that both the current condition and the prospective condition of the public treasury are clearly in evidence.

Estimates and Appropriations.—The co-ordination of the Estimates process is carried out by the Treasury Board. This Board is a separate department of government, its Minister having the designation of President of the Treasury Board. In addition to the President, the Board consists of the Minister of Finance, who serves ex officio as a member, and four other Privy Councillors. Under the Financial Administration Act, the Board may act for the Privy Council in all matters relating to financial management including estimates, expenditures, financial commitments, establishments, revenues, accounts, terms and conditions of employment of persons in the public service and general administrative policy in the public service (see also p. 139).

The Estimates for any one fiscal year are determined as a result of a two-phased review by the Treasury Board of departmental proposals for expenditure. In the spring of each year, at the request of the Secretary of the Treasury Board, each department submits to the Treasury Board a forecast of Estimates for the current and following four fiscal years. During the summer, a review of the programs giving rise to these Estimates forecasts is carried out by the Treasury Board as a result of which tentative Estimates figures are determined for each department for the coming fiscal year. The Board reviews each departmental program submission in the light of probable revenues and governmental policy generally, usually consulting the appropriate Minister and officials. Each department, using the figure resulting from this review as a guideline, develops in detail its manpower and other resource requirements and submits them to the Treasury Board late in October in the form of Main Estimates for the fiscal year beginning Apr. 1. These Estimates are analysed by the Treasury Board staff and compared with the guidelines determined during the spring program review. The Board reviews each departmental submission in the light of the current budgetary outlook. The Estimates may be rejected or reduced and unresolved differences of opinion may be referred to the Cabinet for decision. When the Board is satisfied with their substance and form, the Main Estimates are submitted to the Cabinet and later to the Governor in Council for approval and are then laid before the House of Commons.

On motion of the President of the Treasury Board, the Estimates are initially referred for consideration to the Committee of Supply, which is a committee of the whole House. However, the Estimates of most departments may then go to standing committees of the House; such estimates, after being reported upon to the House, are referred back to the Committee of Supply which alone can approve the resolution of expenditure. The consideration of the Estimates usually extends over a period of several months. Each vote is the subject of a separate resolution and Members of the House may question the Minister

* Prepared under the direction of H. R. Balls, Comptroller of the Treasury, in consultation with D. R. Yeomans, Assistant Secretary of the Treasury Board, Ottawa.

on any item but no private member or Minister on his own responsibility can introduce any new expenditure proposal or any amendment to an Estimates item that would result in an increased expenditure. When the examination of the individual items has been completed, a resolution approving the granting of moneys is referred to the Committee of Ways and Means, also a committee of the whole House. When such resolutions are passed, an appropriation Bill is introduced which, when approved by the House of Commons and the Senate, is given Royal Assent and becomes law. Grants in the Appropriation Acts are grants to the Crown and funds cannot be disbursed until the supply voted by Parliament to the Crown is released by a warrant prepared on an Order of the Governor in Council and signed by the Governor General.

As weeks or months may elapse after the commencement of the fiscal year before the main Appropriation Act is passed, funds are made available for the conduct of government functions by the passage of an interim supply Bill granting one or more twelfths of the total of each item in the Estimates. Additional interim supply Bills may be introduced if required, awaiting Parliament's detailed consideration of the Estimates. In addition, to cover any new and unforeseen requirements that might arise during the year, Supplementary Estimates may be introduced and just prior to the end of the fiscal year further Supplementary Estimates are laid before the House. These Supplementary Estimates are dealt with in the same manner as the Main Estimates.

In addition to the expenditure items included in the annual Appropriation Acts, there are a number of items, such as interest on the public debt, family allowances and old age assistance payments, which have been authorized under the provisions of other statutes. Although it is not necessary for Parliament to pass annually on these items, they are included in the Main Estimates for purposes of information. Statutory provision also exists for the expenditure of public money in emergencies where no parliamentary appropriation is available. Under the Financial Administration Act, the Governor in Council, upon the report of the President of the Treasury Board that there is no appropriation for the expenditure and upon the report of the appropriate Minister that the expenditure is urgently required, may order the issuance of a special warrant authorizing disbursement of the amount required. Such warrants may be issued only when Parliament is not in session and every warrant must be published in the *Canada Gazette* within thirty days of issue and reported to Parliament within fifteen days of assembly. The Fire Losses Replacement Account Act also provides for emergency expenditures for the urgent repair or replacement of property destroyed or damaged by fire, where there is not sufficient money available in the appropriation for the Service suffering loss. Such amounts must be charged subsequently to an appropriation or included in the Estimates for the department or agency concerned.

In addition, disbursements are made for purposes not reflected in the budgetary accounts but recorded in the Government's statement of assets and liabilities, such as loans to and investments in Crown corporations, loans to international organizations and to national, provincial and municipal governments, and loans to veterans. There are also disbursements in connection with deposit and trust accounts and annuity, insurance and pension accounts which the Government holds or administers, including the old age security fund and the Canada Pension Plan fund which are operated as separate entities. Although these disbursements are excluded from the calculation of the annual budgetary surplus or deficit, they are all subject to appropriation by Parliament either in the annual Appropriation Acts or in other legislation.

The Budget.—Some time after the Main Estimates have been introduced, the Minister of Finance presents his annual Budget Speech in the House of Commons. Budget papers, tabled for the information of Parliament at least one day prior to the presentation of the Budget, include a general review of economic conditions and a preliminary review of the Government's accounts for the fiscal year then ending. The Budget Speech itself reviews the state of the national economy and the financial operations of the Government for the previous fiscal year and gives a forecast of the probable financial requirements for

the year ahead, taking into account the Main Estimates and making allowances for Supplementary Estimates and probable lapsings. At the close of his address, the Minister tables the formal resolutions for changes in the existing tax rates and customs tariff which, in accordance with parliamentary procedure, must precede the introduction of any money Bills. These resolutions give notice of the amendments which the Government intends to ask Parliament to make in the taxation statutes. However, if a change is proposed in a commodity tax, such as a sales tax or excise duty on a particular item, it is usually made effective immediately; the legislation, when passed, is made retroactive to the date of the Speech.

The Budget Speech is delivered in support of a motion that the House go into Committee of Ways and Means, the debate on which may take up six sitting days. With the passage of the motion, the way is clear for the consideration of the Budget resolutions and, when these have been approved by the Committee, a report to this effect is made to the House and the tax Bills are introduced and thereafter dealt with in the same manner as all other government financial legislation.

Revenues and Expenditures.—The administrative procedures whereby revenues are collected and expenditures are made are, for the most part, contained in the Financial Administration Act.

With respect to revenues, the basic requirement is that all public money shall be paid into the Consolidated Revenue Fund, which is defined as the aggregate of all public money on deposit to the credit of the Receiver General. The Treasury Board has prescribed detailed regulations governing the receipt and deposit of such money. For the actual custody of public money, use is made of the Bank of Canada and the chartered banks. Balances are allocated to the various chartered banks on the basis of a percentage allocation established by agreement among all the banks and communicated to the Department of Finance by the Canadian Bankers' Association. The daily operating account is maintained with the Bank of Canada and the division of funds between it and the chartered banks takes into account the immediate cash requirements of the Government and consideration of monetary policy. The Minister of Finance may purchase and hold securities of, or guaranteed by, Canada and pay for them out of the Consolidated Revenue Fund or may sell such securities and pay the proceeds into the Fund. Thus, if cash balances in the Fund are in excess of requirements for the immediate future they may be invested in interest-earning assets. In addition, the Minister of Finance has established a purchase fund to assist in the orderly retirement of the public debt.

The principal agencies exercising control over expenditures are the Treasury Board (previously described) and the Comptroller of the Treasury, who has the status of a deputy head but is an officer of the Department of Finance, with representatives who act as accounting and disbursing officers stationed in all the principal departments.

The Treasury Board exercises detailed central control over the budgets, programs and staffs of departments and over financial and administrative matters generally. Although the most important part of this control function is exercised during the annual consideration of departmental long-range program plans and the Estimates, the Board maintains continuous control over certain types of expenditure to ensure that the scale of activities and commitments for the future is held within approved policies, that departments follow uniform, efficient and economical practices, and that the Government is informed of and approves any major development of policy or significant transaction that might give rise to public or parliamentary criticism.

To ensure that the decisions of Parliament, the Government and Ministers in regard to expenditures are enforced, there is a centralized accounting and disbursing system. The Financial Administration Act provides that no payment shall be made out of the Consolidated Revenue Fund without the authority of Parliament and no charge shall be made against an appropriation except upon the requisition of the appropriate Minister or a person authorized by him in writing. These requisitions, and certificates that the work has been performed, the material supplied or the services rendered and that the price

charged is reasonable or according to contract, together with such documents as may be required, are presented to the Comptroller of the Treasury. If the charge is a lawful one against the appropriation and does not exceed the amount of the appropriation or reduce it below the amount necessary to meet other commitments, and does not contravene any applicable legislative or executive requirements, the Comptroller will make the payment. However, if he declines to make a payment, disallows an item in an account or refuses to give a certificate, the Minister concerned may report the circumstances to the Treasury Board for decision and the Board may confirm or overrule the action of the Comptroller. The Comptroller may transmit to the Board any requisition with respect to which he desires its direction and the Board may order that payment be made or refused.

At the beginning of each fiscal year each department submits to the Treasury Board, through the Comptroller, a division into allotments of each vote included in its Estimates. Once approved by the Board, these allotments cannot be varied or amended without the approval of the Board and expenditures charged to appropriations are limited to such allotments. To avoid over-expenditures within a fiscal year, the Comptroller records and controls commitments coming in course of payment within the year for which Parliament has provided or has been asked to provide appropriations. The Government, through the Treasury Board and the Comptroller, also maintains records of commitments made under contract that will fall due in succeeding years, since it must be prepared in future to ask Parliament for appropriations to cover them. Any unexpended amounts in the annual appropriations lapse at the end of the year for which they are granted, but for thirty days subsequent to Mar. 31 payments may be made and charged to the previous year's appropriations for debts incurred prior to the end of that fiscal year.

Under the Financial Administration Act, every payment pursuant to an appropriation is made under the control and direction of the Comptroller by draft or cheque drawn on the Receiver General or by such other instrument as the Treasury Board may direct. In practice, such drafts or cheques are cleared daily by the chartered banks through the Bank of Canada to the Cheque Adjustment Division of the Comptroller's Office, and reimbursement is made by means of a cheque drawn on the Receiver General's account with the Bank of Canada.

Public Debt.—In addition to the collection and disbursement of public money for budgetary and non-budgetary purposes, the Government receives and disburses substantial sums in connection with its public debt operations. The Minister of Finance is authorized to borrow money by the issue and sale of securities at such rate of interest and subject to such terms and conditions as the Governor in Council may approve. Although the specific authority of Parliament is required for new borrowings, the Financial Administration Act authorizes the Governor in Council to approve the borrowing of such sums of money as are required for the redemption of maturing or called securities and, to ensure that the Consolidated Revenue Fund will be sufficient to meet lawfully authorized disbursements, he may also approve the temporary borrowing of such sums as are necessary for periods not exceeding six months. The Bank of Canada acts as the fiscal agent of the Government in the management of the public debt.

Accounts and Financial Statements.—Under the Financial Administration Act, accounts are kept to show the revenues of Canada, the expenditures made under and the commitments chargeable against each appropriation, the other payments into and out of the Consolidated Revenue Fund, and such of the assets and direct and contingent liabilities as the Minister of Finance believes are required to give a true and fair view of the financial position of Canada. The statement of assets and liabilities is designed to disclose the amount of the net debt, which is determined by offsetting against the gross liabilities only those assets regarded currently as readily realizable or interest- or revenue-producing. Fixed capital assets, such as government buildings and public works, are charged to budgetary expenditures at the time of acquisition or construction and are shown on the statement of assets and liabilities at a nominal value of \$1.

Annually, on or before Dec. 31 or, if Parliament is not then in session, within fifteen days after the commencement of the ensuing session, the *Public Accounts* is laid before the House of Commons by the Minister of Finance. The *Public Accounts* contains a survey of the financial transactions of the fiscal year ended the previous Mar. 31, statements of the revenues and expenditures for that year and of the assets and direct and contingent liabilities as at the end of that year, together with such other accounts and information as are necessary to show the financial transactions and financial position of Canada or which are required by law to be reported in the *Public Accounts*. Monthly financial statements are also published in the *Canada Gazette*.

The Auditor General.—The Government's accounts are subject to an independent examination by the Auditor General who is an officer of Parliament. With respect to expenditures, this examination is a post-audit for the purposes of reporting whether the accounts have been faithfully and properly kept and whether the money has been expended for the purposes for which it was appropriated by Parliament and the expenditures have been made as authorized; any audit before payment is the responsibility of the Comptroller of the Treasury. With respect to revenues, the Auditor General is required to ascertain that all public money is fully accounted for and that the rules and procedures applied are sufficient to ensure an effective check on the assessment, collection and proper allocation of the revenue. With respect to public property, he is required to satisfy himself that essential records are maintained and that the rules and procedures applied are sufficient to safeguard and control such property. The Auditor General reports to Parliament the results of his examination, calling attention to any case which he considers should be brought to the notice of the House. He also reports to Ministers, the Treasury Board or the Government any matter which in his opinion calls for attention so that remedial action may be taken promptly.

Public Accounts Committee.—It is the usual practice to refer the *Public Accounts* and the *Auditor General's Report* to the Public Accounts Committee of the House of Commons, which may review them and report its findings and recommendations to the House of Commons.

Section 2.—Departments, Boards, Commissions, etc.*

The following paragraphs indicate the functions of the various departments of government and the special boards and commissions in connection with the work of government.

Although it is not possible, owing to the limitations of space, to enumerate in this Section the details of each service or the divisions or sections of all departments, the main branches are given along with those services that differ in some quality from the larger class of subjects handled by a department. The work of many of these departments and boards is given in detail in later Chapters of this volume. The Index will be useful in locating required information.

Department of Agriculture.—This Department was established in 1867 (SC 1868, c. 53) and undertakes work on all phases of agriculture. Research and experimentation are carried out by the Research Branch; the maintenance of standards and protection of products by the Production and Marketing Branch and the Health of Animals Branch; the Canada Grain Act, as it pertains to the inspection, weighing, storage and transportation of grain, is administered by the Board of Grain Commissioners; land reclamation and development are carried out by the Prairie Farm Rehabilitation Administration; and farm income security and price stability are provided under the Crop Insurance Act, the Prairie Farm Assistance Act, the Canadian Dairy Commission Act, the Agricultural Stabilization Act and the Agricultural Products Board. The Farm Credit Corporation, the Board of Grain Commissioners and the Canadian Dairy Commission report to Parliament through the Minister of Agriculture.

* As at Sept. 30, 1967; any major changes taking place between that date and the time of going to press will be carried in an Appendix to this volume. Also, the accompanying organization chart is brought up to the latest possible date before going to press; see lower right-hand corner.

Auditor General's Office.—This Office originated in 1878 (SC 1878, c. 7) and currently functions under the Financial Administration Act (RSC 1952, c. 116). The Auditor General is responsible for examining accounts relating to the Consolidated Revenue Fund and to public property, and for reporting annually to the House of Commons the results of his examinations. He also audits the accounts of various Crown corporations and other instrumentalities.

Board of Broadcast Governors.—This Board, established under the provisions of the Broadcasting Act which was assented to on Sept. 6, 1958, is given authority to regulate radio and television broadcasting in Canada. The Board has authority to regulate the establishment and operation of both public and private broadcasting stations and networks of stations. Applications for licences to establish new broadcasting stations, for changes in the facilities of existing stations or for changes in the ownership or in the share structure of licensees are referred to the Board by the Minister of Transport for a recommendation before being dealt with. The Board has three full-time and twelve part-time members. The Secretary of State acts as spokesman for the Board in the Cabinet and the House of Commons.

Board of Grain Commissioners.—Constituted in 1912 under the Canada Grain Act (RSC 1952, c. 25), the Board of Grain Commissioners for Canada provides general supervision over the physical handling of grain in Canada by licensing elevator operators, inspecting and weighing grain received at and shipped from terminal elevators, and other services. The Board, comprising a Chief Commissioner and two Commissioners, has authority to inquire into any matter relating to the grading and weighing of grain, deductions for dockage or shrinkage, deterioration of any grain during storage or treatment, unfair or discriminatory operation of a grain elevator, etc. The Board publishes its regulations in the *Canada Gazette* and reports to Parliament through the Minister of Agriculture.

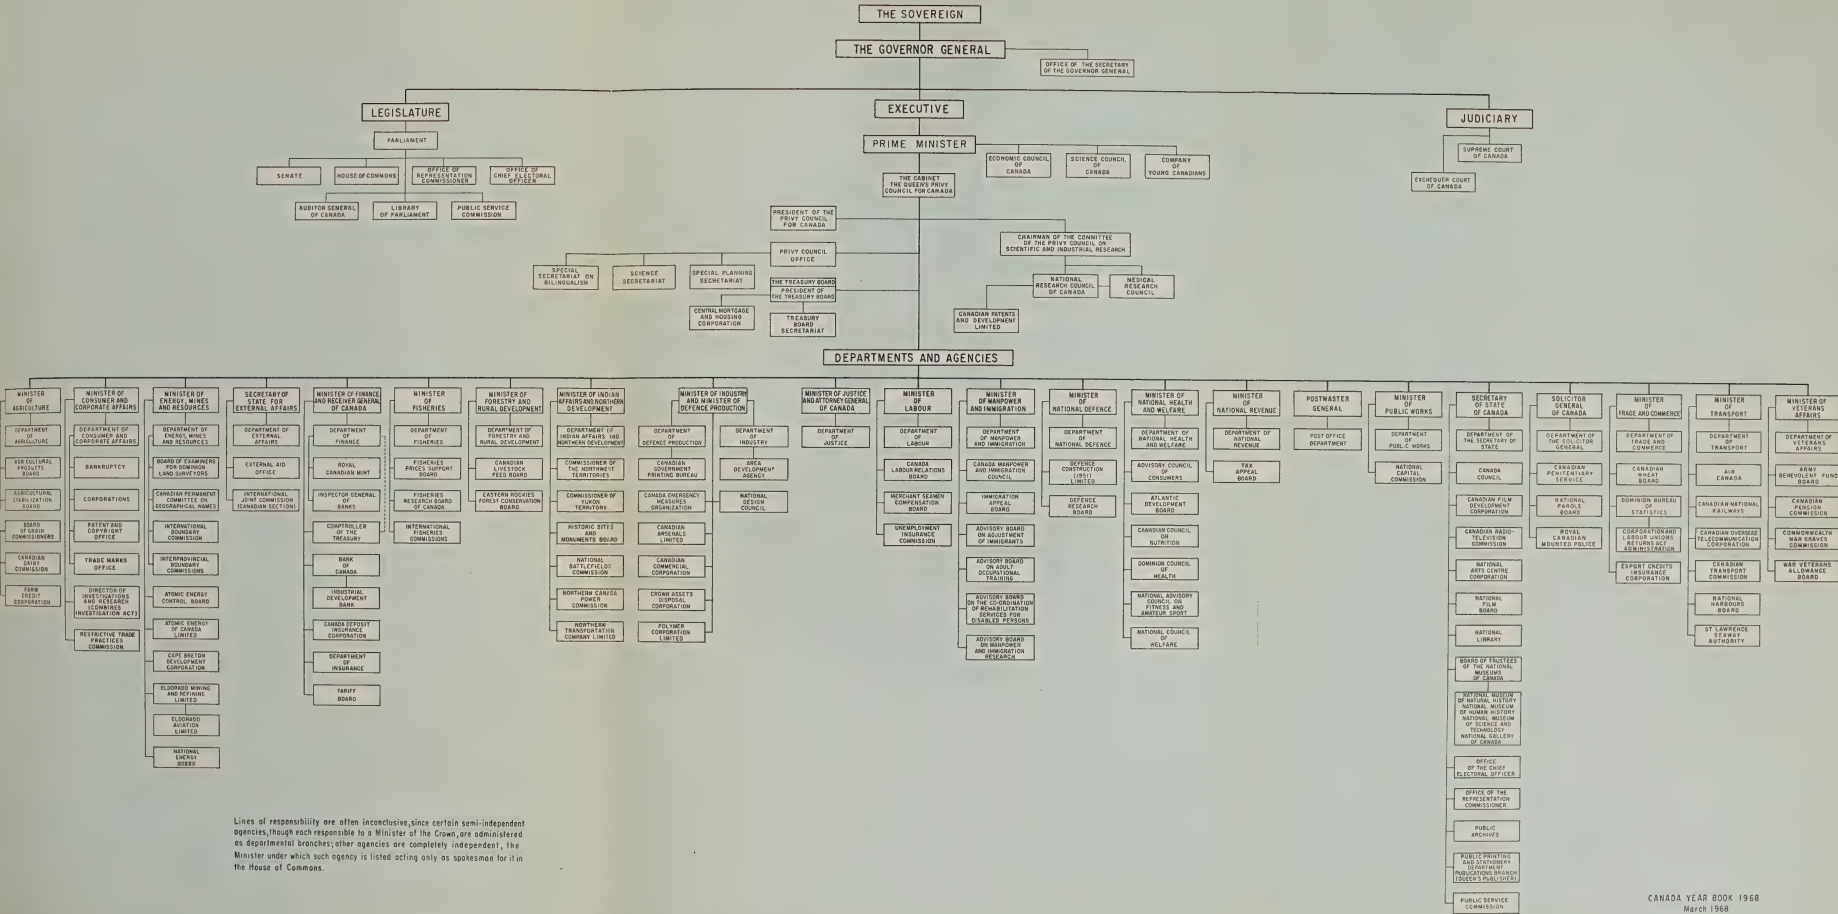

Canada Emergency Measures Organization.—This Organization was established in June 1957 to co-ordinate civil emergency planning at the federal level. Reassignments of responsibilities in this field were made by Order in Council in 1959, 1963 and 1965. In the latter year, previous Orders were revoked and replaced by the Civil Emergency Measures Planning Order PC 1965-1041, which schedules civil emergency powers, duties and functions to 12 federal departments and four agencies, under the Minister of Defence Production, to whom this responsibility had been transferred in 1963. The Planning Order directs that the Minister, through the Emergency Measures Organization, shall develop policies and a program to ensure continuity of government in an emergency; co-ordinate civil emergency planning and training by departments and agencies of the Government of Canada; plan, in conjunction with provincial authorities, for the control of civil road transport in an emergency; plan civil emergency measures in respect to matters which are not the responsibility of any department, agency or Crown corporation of the Government; provide assistance and guidance to provincial and municipal governments in civil emergency planning matters; provide general liaison with other countries and with NATO on matters relating to civil emergency planning; and be responsible for the direction and administration of the Canadian Civil Defence College (since renamed Canadian Emergency Measures College). In February 1966, the Government delegated to the Minister, through the Canada Emergency Measures Organization, responsibility for providing and co-ordinating the initial federal response to any peacetime disaster situation whether the Federal Government was either directly involved or called upon for assistance by provinces or municipalities.

Canadian Government Printing Bureau.—The printing functions formerly provided by the Department of Public Printing and Stationery were transferred by Order in Council (PC 1963-1254) dated Aug. 21, 1963, to the Department of Defence Production. The latter Department, on Apr. 1, 1964, authorized the organization of the Canadian Government Printing Bureau as a distinct function under that Department, to be separated from the former Publications Branch and the Purchasing Stationery and Stores Branch of the Department of Public Printing and Stationery.

The Canadian Government Printing Bureau, under the direction of a General Manager who reports to the Deputy Minister of Defence Production, provides a variety of printing services, such as House of Commons Debates, Votes and Proceedings, Orders of the Day and other parliamentary papers for both Houses of Parliament, and other printing requirements of government departments and agencies. All official documents are printed in English and French. The main plant, located in Hull, Que., is the largest diversified printing shop in Canada, and includes composition, varitype, letterpress, offset press, proofroom and bindery. These production facilities are complemented by Plant Engineering, Research and Industrial Engineering, Industrial Relations, and Financial Services. Smaller field units, supervised by the Production Manager (Outside Plants), handle the duplicating and short-run requirements of individual departments. These units are located throughout the Ottawa area and in major Canadian cities and National Defence establishments across the country.

Canadian Penitentiary Service.—The Penitentiary Service operates under the Penitentiary Act (SC 1960-61, c. 53) and is under the jurisdiction of the Solicitor General of Canada. It is responsible for all federal penitentiary institutions and for the care and training of persons sentenced or committed thereto. The Commissioner of Penitentiaries, under the direction of the Solicitor General, has control and management of the Service and all matters connected therewith.

THE GOVERNMENT OF CANADA

Canadian Pension Commission.—This Commission, established in 1933 by amendments to the Pension Act (RSC 1952, c. 207), replaced the Board of Pension Commissioners, the first organization created to deal solely with war pensions for service in Canada's Armed Forces. The Commission's main function is the administration of the Pension Act under which it adjudicates upon all claims for pension in respect of disability or death arising out of service in Canada's Armed Forces; and Parts I to X inclusive of the Civilian War Pensions and Allowances Act, which provide for the payment of pensions in respect of death or disability arising out of civilian service directly related to the prosecution of World War II. It also adjudicates on claims for pension under various other measures; authorizes and pays monetary grants accompanying certain gallantry awards bestowed on members of the Armed Forces; and administers various trust funds established by private individuals for the benefit of veterans and their dependants. The Commission consists of eight to twelve Commissioners and up to five *ad hoc* Commissioners appointed by the Governor in Council. Its chairman has the rank of a Deputy Head of a department and the Commission reports to Parliament through the Minister of Veterans Affairs.

Canadian Transport Commission.—The Canadian Transport Commission created in 1967 by the National Transportation Act (SC 1967, c. 69) took over powers formerly vested in the Board of Transport Commissioners, the Air Transport Board and the Canadian Maritime Commission, giving it regulatory and judicial functions with respect to almost all aspects of railway, commercial air and merchant marine services. The Act also provides for the regulation of extra-provincial motor vehicle transport and commodity (solids) pipelines. The Commission is divided into five Committees for the purposes of performing its duties under the Act: (1) The Railway Transport Committee deals with location, construction and operation of lines and with rates and fares; it also deals with the regulation of express companies, and telegraph and telephone companies (except those provincially or municipally controlled), and the tolls of international bridges and tunnels. (2) The Air Transport Committee is responsible for the economic regulation of commercial air services provided by Canadian air carriers within Canada and abroad, and by foreign carriers operating into and out of Canada. (3) The Water Transport Committee has the function of making recommendations concerning domestic and international shipping policy and the merchant marine and of co-ordinating such policies with those applying to other modes of transport; it also administers the steamship subsidies voted by Parliament. (4) The Motor Vehicle Transport Committee is responsible for the regulation of commercial interprovincial and international motor vehicle transport. Prior to the passing of the National Transportation Act, regulation of all motor vehicle transport was carried out by the provinces. (5) The Commodity Pipeline Committee controls the licensing of interprovincial and international (solids) pipelines and the regulation of pipeline tolls. Regulation of oil and gas pipelines remains the duty of the National Energy Board.

The Canadian Transport Commission is also given the responsibility for conducting investigations and research and for making recommendations on economic policy in all transportation fields in so far as the Federal Government is concerned. The Commission reports to Parliament through the Minister of Transport.

Department of Defence Production.—The Department of Defence Production was established in April 1951 by the Defence Production Act (RSC 1952, c. 62, as amended by SC 1955, c. 52). It has exclusive authority for the procurement of goods and services required by the Department of National Defence and, in addition, has the responsibility for ensuring that necessary production capacity and materials are available in Canada to support the defence production program. The Department's responsibilities also include defence development and procurement sharing with the United States, defence production activities with other members of the NATO alliance and friendly countries, and the purchasing in Canada of goods and services required by foreign governments under a variety of international agreements.

The Department acts as the central purchasing and supply agency for the Federal Government. The Canadian Government Purchasing Service has five operational Branches—Aerospace, Electrical and Electronics, Shipbuilding, Armament and Vehicles, and General Purchasing. The Canadian Government Supply Service has seven headquarters Branches—Equipment Management, Traffic Management, Cataloguing, Specifications and Standards, Quality Management, Supply Management, and Regional Purchasing with offices maintained in Canada, United States and Western Europe; the Supply Service also operates the No. 1 Supply Centre as a pilot operation within the Ottawa area.

Within the Department, a Project Management Branch has been established to initiate a program of single office project management for the direction of all major acquisition project activity, both civil and military. Projects for the development and production of new defence systems to meet the requirements of other countries are also managed by this Branch. Under this arrangement, a single officer is assigned authority and responsibility for the successful management of all aspects of the implementation phase of an individual procurement project.

The Department's international responsibilities and functions include the management and administrative support of the Canadian Commercial Corporation, the establishment of co-operative defence industrial research, and development and production arrangements with Canada's allies. These activities are directed through the medium of an International Programs Branch supported by a group of specialist personnel located in the United States, Britain, France, Germany and Italy, and in the Canadian Delegation to the North Atlantic Council.

Departmental managerial and support functions are handled by the Departmental Secretary's Branch, Personnel Branch, Comptroller's Branch, Departmental Planning and Control Group, Management Analysis Division, Customer Service Group, Contract Administration Branch, the Financial Review Branch and the Legal Adviser.

The following Crown companies and agencies report to Parliament through the Minister of Defence Production: Canadian Arsenals Ltd., Canadian Commercial Corporation, Crown Assets Disposal Corporation and the Canada Emergency Measures Organization. The Canadian Government Printing Bureau reports to the Minister through the Deputy Minister of Defence Production.

Dominion Bureau of Statistics.—The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (SC 1918, c. 43). In 1948 this statute, which had been consolidated as the Statistics Act (RSC 1927, c. 190), was repealed and replaced by the Statistics Act (RSC 1952, c. 257); it was amended by SC 1952-53, c. 18, assented to Mar. 31, 1953.

The function of the Dominion Bureau of Statistics is to compile, analyse and publish statistical information relative to the commercial, industrial, financial, social and general condition of the people and to conduct regularly a census of population and agriculture of Canada as required under the Act.

The Bureau is a major publication agency of the Federal Government; its reports cover all aspects of the national economy. The administrative head of the Bureau is the Dominion Statistician who has the rank of a Deputy Head of a department and reports to Parliament through the Minister of Trade and Commerce.

Department of Energy, Mines and Resources.—Under the terms of the Government Organization Act (SC 1966, c. 25), the Department of Energy, Mines and Resources supersedes the Department of Mines and Technical Surveys and encompasses certain functions formerly conducted by other departments and agencies. The Department, in addition to its administrative services, is organized into four groups: the Mines and Geosciences Group includes the Geological Survey of Canada, the Mines Branch, the Surveys and Mapping Branch and the Observatories Branch, all of which are engaged in research and the provision of information in their respective fields; the Mineral Development Group includes the Mineral Resources Division, which gathers economic data for all minerals for use of government, industry and the public and conducts administrative functions of resource management, the Explosives Division which controls, under the provisions of the Explosives Act, the production and handling of explosives, and the Quebec Regional Office; the Water Group is concerned with all types of water matters including groundwater and oceanic investigations and surveys, water pollution, water power, water conservation and control, and federal-provincial and international studies and regulations; the Energy Development Group recommends and advises on energy policies in the total context of all energy sources and future energy requirements.

The following Crown corporations report to Parliament through the Minister of Energy, Mines and Resources: the National Energy Board, the Dominion Coal Board, Atomic Energy of Canada Limited, Eldorado Mining and Refining Limited, Eldorado Aviation Limited, the Atomic Energy Control Board, Northern Ontario Pipe Line Corporation and the Cape Breton Development Corporation.

Department of External Affairs.—This Department was established in 1909 by "An Act to create a Department of External Affairs" (RSC 1952, c. 68). Its main function is the protection and advancement of Canadian interests abroad. The Minister responsible for the Department is the Secretary of State for External Affairs. The senior permanent officer (Deputy Minister) of the Department, the Under-Secretary of State for External Affairs, is assisted by a Deputy Under-Secretary and by four Assistant Under-Secretaries and is advised by the officers in charge of the various divisions. The divisional heads are each responsible for a part of the work of the Department and they are assisted by Foreign Service Officers, External Affairs Officers, other administrative officers and an administrative staff. Officers serving abroad are formally designated as High Commissioners, Ambassadors, Ministers, Counsellors, First Secretaries, Second Secretaries, Third Secretaries and Attachés at diplomatic posts and Consuls General, Consuls and Vice-Consuls at consular posts. There are 96 diplomatic, consular and other missions maintained abroad by the Department. In 49 additional countries, Canada is represented by non-resident Ambassadors or High Commissioners.

The work of the Department at Ottawa is performed by 26 divisions and two units. The divisions may be grouped into three categories—area, functional and administrative. There are six area divisions—African and Middle Eastern, Commonwealth, European, Far Eastern, Latin American and United States; 14 functional divisions—Communications, Consular, Cultural Affairs, Defence Liaison (1), Defence Liaison (2), Disarmament, Economic, Historical, Information, Legal, Passport, Press and Liaison, Protocol and United Nations; and six administrative divisions—Administrative Services, Finance, Personnel Operations, Personnel Services, Registry, and Supplies and Properties. The two units are the Inspection Service and the Organization and Methods Unit.

The International Joint Commission reports to the Secretary of State for External Affairs of Canada as well as to the Secretary of State of the United States. The Secretary of State for External Affairs reports to Parliament for the External Aid Office.

Department of Finance.—This Department was created by Act of Parliament in 1869 and now operates under the Financial Administration Act (RSC 1952, c. 116). The Department is responsible for the financial administration of Canada including the raising of money required for the various governmental activities by way of taxation or borrowing. The Comptroller of the Treasury, an officer of the Department, is responsible for all government disbursements. The work of the Department is organized into the following divisions: Tax Policy, Fiscal Policy, Federal-Provincial Relations, Social Security and Pensions, Economic Analysis, Government Finance, Tariffs, International Economic Relations, Resource Programmes, Economic Development, and International Programmes. The Royal Canadian Mint is a branch of the Department as is the Inspector General of Banks. The Tariff Board, the Bank of Canada and its subsidiary, the Industrial Development Bank, and the Department of Insurance report to Parliament through the Minister of Finance who is also the spokesman in the Cabinet and the House of Commons for the Auditor General of Canada.

Department of Fisheries.—The federal fisheries service established at Confederation functioned as a branch of other departments until formation of the Department of Fisheries under its own Minister in 1930. Fisheries are exclusively within federal jurisdiction but certain administrative responsibilities are delegated to provinces under varying arrangements.

Principal responsibilities of the Department are: conservation and protection of fisheries through enforcement of fishing regulations; cultivation and development of fish stocks by scientific and technical means; inspection of fish products for quality control; encouragement of industrial development by technical and financial aid; economics research and intelligence services to industry and the public; and promotion of fisheries and fish products by information and consumer education programs.

Agencies associated with the Department are the Fisheries Research Board of Canada and the Fisheries Prices Support Board (a Crown corporation). The Department, with headquarters in Ottawa, has regional offices in St. John's, Nfld., Halifax, N.S., Quebec, Que., Winnipeg, Man., and Vancouver, B.C. The Department is represented on the following international commissions: Pacific Salmon Fisheries, Pacific Halibut, Northwest Atlantic Fisheries, North Pacific Fisheries, Whaling, Great Lakes Fishery and North Pacific Fur Seal.

Fisheries Research Board.—The Fisheries Research Board of Canada operates under the Fisheries Research Board Act of 1937 (amended in 1947 and 1952-53). It has been active as a fisheries research body since 1898, first as the Board of Management of the Canadian Marine Biological Station and later (1912) as the Biological Board of Canada. The Board operates under the Minister of Fisheries and membership consists of a full-time chairman and not more than 18 other members. The majority of Board members are university scientists, and other members are representative of the fishing industry and the Department of Fisheries.

The Board, with headquarters in Ottawa, operates research establishments in St. John's, Nfld., Halifax and Dartmouth, N.S., St. Andrews, N.B., Ellerslie, P.E.I., Grande-Rivière and Ste. Anne de Bellevue, Que., Winnipeg, Man., Vancouver and Nanaimo, B.C. Board scientists carry out research on distribution of fish stocks, biology and life history of fishes, marine mammals and other aquatic creatures and plants, oceanography, fishing techniques, quality and nutritive value of fisheries products, with the principal objective of increasing the scope and value of Canadian fisheries.

Department of Forestry and Rural Development.—This Department was established as the Department of Forestry in October 1960 to bring under one Ministry the conduct of programs of research relating to forest management, silviculture, protection against fire, insects and disease, and the improvement in the standards of wood utilization and development of forest products. By Order in Council of Mar. 5, 1964, the responsibilities of the Minister of Forestry were expanded to include the functions formerly exercised by the Minister of Agriculture respecting certain rural development programs under the Agricultural Rehabilitation and Development Act (ARDA), the Maritime Marshland Rehabilitation Act, and the administration of the program of freight assistance and grain storage costs on western feed grains. The name of the ARDA was changed in 1966 (SC 1966, c. 11) to Agricultural and Rural Development Act (ARDA) and the name of the Department was changed under the terms of the Government Organization Act, 1966 (SC 1966, c. 25) to Department of Forestry and Rural Development.

The Forestry Branch of the Department, in addition to the above functions, carries out economic studies of the forest resources and of the forest industries. Financial assistance is offered to the provinces toward meeting specific forestry needs. The Department conducts forest surveys and provides technical assistance to other agencies of the Federal Government responsible for administration of forest lands, and co-operates with international organizations concerned with forestry in which Canada maintains membership. The Department acts as co-ordinator for the seven-agency Technical Committee for Watershed Research of the Eastern Rockies Forest Conservation Board.

The ARDA program of the Department is joined with existing programs of resource management and economic development to provide public assistance in meeting problems of physical, economic and social adjustment in rural areas. It also includes a program of soil and water conservation aimed at increasing the productivity of basic rural resources. Through a central and de-

veloping information program, the Department seeks to promote public understanding of the value of the forest resources and, in co-operation with the provinces, of the work and purpose of the ARDA program.

The Department administers the Fund for Rural Economic Development Act, 1966 (SC 1966, c. 41), which provides for the establishment of a fund for the economic and social development of special rural development areas. Under this Act the Minister of Forestry and Rural Development may, on the recommendation of the Advisory Board and with the approval of the Governor in Council, enter into an agreement with any province for the joint undertaking of a rural development program in a special rural development area, or may contribute to the cost of such a program undertaken by the province. The Advisory Board consists of not more than ten officials of departments or agencies of the Government of Canada, appointed by the Governor in Council. In early 1967, the Act was amended to increase the fund from \$50,000,000 to \$300,000,000.

The Minister of Forestry and Rural Development reports to Parliament for the Eastern Rockies Forest Conservation Board and the Canadian Livestock Feed Board.

Department of Indian Affairs and Northern Development.—The Department of Indian Affairs and Northern Development was established in June 1966 under the terms of the Government Organization Act (SC 1966, c. 25), superseding the Department of Northern Affairs and National Resources. In addition to the Financial and Management Services, the Department is divided into four Branches: the Natural and Historic Resources Branch, which administers the National Parks, the National Historic Parks and the National Historic Sites coming within the jurisdiction of the Federal Government; the Northern Administration Branch, which is responsible for the administration of various federal Acts, territorial ordinances and regulations pertaining to the Government of the Northwest Territories, for the conduct of certain business arising from the general administration of the Yukon Territory, for the administration of natural resources in those Territories, and for Eskimo affairs; the Indian Affairs Branch, which has the responsibility of assisting the Indians through programs in the fields of education, economic development, social welfare and community development so that they may share the rights and responsibilities of citizenship and participate on the basis of equality and opportunity through the full spectrum of Canadian life; and the Canadian Wildlife Service, which conducts research on the fauna of Canada and maintains liaison with other international, national, provincial and private agencies and organizations that deal with wildlife. Within the Department there is also the Resource and Economic Development Group, which is responsible for developing plans and projects designed for the management of northern non-renewable resources and the expansion of the northern economy to bring about an improvement, not only in business and industrial activity, but also in northern employment opportunities.

The Commissioner of the Northwest Territories and the Commissioner of Yukon Territory report to Parliament through the Minister of Indian Affairs and Northern Development. The Minister is also responsible to Parliament for the Northern Canada Power Commission, the National Battlefields Commission, the Historic Sites and Monuments Board of Canada which is an honorary body of recognized historians representing the various provinces, and the Northern Transportation Company Limited. The Advisory Committee on Northern Development acts in an advisory capacity to the Minister. The Deputy Minister is Chairman of the Northern Canada Power Commission.

Department of Industry.—Under the Department of Industry Act (SC 1963, c. 3), the Minister of Industry is responsible for promoting the establishment, growth, efficiency and improvement of manufacturing industries in Canada through the development and implementation of programs to assist manufacturers to adjust to changing market conditions, to help them develop new lines of production and enter new markets, and to promote greater industrial research and development as well as good design within Canadian industry.

The Department of Industry is also responsible for undertaking research and investigations on an area or regional basis and preparing programs of development for designated areas of high unemployment and slow economic growth. As a part of these programs, various Federal Government incentive measures are administered.

The Department is organized into ten industry branches: Aircraft, Chemicals, Apparel and Textiles, Electrical and Electronics, Food Products, Machinery, Materials, Mechanical Transport, Marine and Rail, and Wood Products. The Area Development Agency carries out the work associated with regional programs, and the National Design Branch, in co-operation with the National Design Council, undertakes programs to promote and encourage good design in Canadian products.

The Program Advisory Group consists of a small number of officers experienced in economics, commercial policy, industrial research and development. Their function is to advise the Department in these areas and to co-ordinate departmental programs related to them.

Department of Insurance.—The Minister of Finance is responsible for the Department of Insurance which originated in 1875 as a branch of the Department of Finance but was constituted a separate Department in 1910. It is authorized and governed by the Department of Insurance Act (RSC 1952, c. 70). Under the Superintendent of Insurance, who is the Deputy Head, the Department administers the statutes of Canada applicable to: insurance, loan and trust companies

incorporated by the Parliament of Canada; provincially incorporated insurance companies registered with the Department; British and foreign insurance companies operating in Canada; small loans companies and money-lenders; co-operative credit societies registered under the Co-operative Credit Associations Act; pension plans organized and administered for the benefit of persons employed in connection with certain federal works, undertakings and businesses; and life insurance issued to certain members of the public service prior to May 1954.

Under the relevant provincial statutes, the Department examines trust companies incorporated in the Provinces of Manitoba and New Brunswick and loan and trust companies incorporated in the Province of Nova Scotia.

International Joint Commission.—This Commission was established under a Britain-United States treaty signed Jan. 11, 1909 and ratified by Canada in 1911. The Commission, composed of six members (three appointed by the President of the United States and three by the Government of Canada), is governed by five specific Articles of the Boundary Waters Treaty of 1909. The Commission's approval is required for any use, obstruction or diversion of boundary waters affecting the natural level or flow of boundary waters in the other country; and for any works in waters flowing from boundary waters or below the boundary in rivers flowing across the boundary which raise the natural level of waters on the other side of the boundary.

Problems arising along the common frontier are also referred to the Commission by either country for examination and report, such report to contain appropriate conclusions and recommendations. In addition, questions or matters of difference between the two countries may be referred to the Commission for decision, provided both countries consent.

The Commission reports to the Secretary of State for External Affairs of Canada and to the Secretary of State of the United States.

Department of Justice.—This Department, established by SC 1868, c. 39, now operates under authority of the Department of Justice Act (RSC 1952, c. 71 as amended by SC 1960, c. 4 and SC 1966, c. 25). The Minister of Justice is the official legal adviser of the Governor General and the legal member of the Queen's Privy Council for Canada. It is his duty to see that the administration of public affairs is in accordance with law, to superintend all matters connected with the administration of justice in Canada that are not within the jurisdiction of the provincial governments, to advise upon the legislation and proceedings of the provincial legislatures and generally to advise the Crown upon all matters of law referred to him by the Crown. The Minister of Justice is, ex officio, Her Majesty's Attorney General of Canada. In this capacity it is his duty to advise the heads of the departments of the Government of Canada upon all matters of law connected with such departments, to settle and approve all instruments issued under the Great Seal of Canada, and to regulate and conduct all litigation for or against the Crown in the right of Canada.

Department of Labour.—The Department of Labour was established in 1900 by Act of Parliament (SC 1900, c. 24) and now operates under authority of the Department of Labour Act (RSC 1952, c. 72). The Department administers, under the Minister of Labour, legislation dealing with: industrial relations, investigation of disputes, etc.; fair employment practices; the regulation of fair wages and hours of labour; female employee equal pay; government annuities; government employee compensation; merchant seamen compensation; and hours of work, minimum wages, annual vacations and holidays with pay. It promotes joint consultation with industry through labour-management committees and operates a Women's Bureau. The Department publishes the *Labour Gazette* and other publications, as well as general information on labour-management, employment, manpower and related subjects.

The Merchant Seamen Compensation Board reports to the Minister of Labour. The Department is the official liaison agency between the Canadian Government and the International Labour Organization. The Unemployment Insurance Commission, the Chairman of the Board of Trustees of the Maritime Transportation Unions, the Central Mortgage and Housing Corporation and the Canada Labour Relations Board report to Parliament through the Minister of Labour. The Canada Labour Relations Board administers certain provisions of the Industrial Relations and Disputes Investigation Act.

Library of Parliament.—The Library of Parliament as such was established in 1871 (SC 1871, c. 21) although it existed earlier. It currently functions under RSC 1952, c. 166 and SC 1955, c. 35. The Library of Parliament keeps all books, maps and other articles that are in the joint possession of the Senate and the House of Commons. The Parliamentary Librarian is also responsible for the House of Commons Reading Room. Persons entitled to borrow books from the Library of Parliament are the Governor General, Members of the Privy Council, Members of the Senate and the House of Commons, Officers of the two Houses, Justices of the Supreme Court of Canada and the Exchequer Court, and members of the Press Gallery. In addition, books are lent to other libraries and government agencies and reference service is given to scholars. A special research branch serves Parliamentarians only. The Parliamentary Librarian has the rank of a Deputy Head of a department and is responsible for the control and management of the Library under the Speaker of the Senate and the Speaker of the House of Commons assisted by a Joint Committee appointed by the two Houses.

Department of Manpower and Immigration.—This Department was constituted in January 1966 by the Government Organization Act (RSC 1966, c. 25), which was proclaimed effective on Oct. 1, 1966, under the Minister of Manpower and Immigration. It is composed of two operational divisions and four support services. The Canada Immigration Division administers the Immigration Act and Regulations and is responsible for the selection and examination abroad of immigrants and their movement to Canada, and for the exclusion or deportation of undesirables.

The Canada Manpower Division is responsible for the counselling and effective placement of workers, the recruitment and placement of workers to meet industry's requirements, the occupational training of adults, manpower mobility, creation of seasonal demand for labour to stabilize employment, community adjustment of migrants and immigrants and the rehabilitation of vocationally handicapped workers. The Department also has a service which is responsible for the development and evaluation of departmental programs, research, the operation of pilot projects in training and other areas, legislation and legal services, and emergency manpower planning at the national level. Other support services are Financial and Management, Personnel, and Information.

The Canada Immigration Division, until Oct. 1, 1966, was part of the Department of Citizenship and Immigration which was renamed the Department of Manpower and Immigration; the majority of the other components of the Department were, prior to Oct. 1, 1966, under the jurisdiction of the Department of Labour. At the time of writing (July 1967) the Immigration Appeal Board, which deals with appeals made against Orders of Deportation, reports to the Minister of Manpower and Immigration. In March 1967, a new Immigration Appeal Board Act was passed providing for a new independent Appeal Board.

Department of National Defence.—The Department of National Defence and the Canadian Forces operate under the National Defence Act (RSC 1952, c. 184). The Canadian Forces are administered by the Minister of National Defence and the Associate Minister of National Defence. Since August 1964, when a single Chief of the Defence Staff was appointed, the reorganization of the Canadian Forces Headquarters, the command structure and the consolidation of the Canadian Forces Bases has been proceeding. In June 1965, a plan was announced to reduce the previous major commands in Canada to six: Maritime, Mobile, Air Transport, Air Defence, Training and Materiel. This accomplished, the stage had been reached for final steps toward a single unified force. Authority to complete these steps has been granted under the Canadian Forces Reorganization Act (SC 1967, c. 96), assented to on May 8, 1967. When necessary preparatory arrangements have been completed, this Act will be proclaimed in force and the forces thereby unified.

The Defence Research Board, created in 1947 to carry out research relating to national defence and to advise the Minister on all relevant matters of a scientific or technical nature, functions under the National Defence Act. The Crown corporation, Defence Construction (1951) Limited, reports to Parliament through the Associate Minister of National Defence.

National Energy Board.—This Board was established under the National Energy Board Act, 1959 for the broad purpose of assuring the best use of energy resources in Canada. The Board, composed of five members, is responsible for the regulation of the construction and operation of the oil and gas pipelines that are under the jurisdiction of the Parliament of Canada, the tolls charged for transmission by oil and gas pipelines, the export and import of gas and the export of electric power, and the construction of the lines over which such power is transmitted. The Board is also required to study and keep under review all matters relating to energy under the jurisdiction of the Parliament of Canada and to recommend such measures as it considers necessary and advisable on the subject. The Board reports to Parliament through the Minister of Energy, Mines and Resources.

National Film Board.—The National Film Board, established in 1939, operates under the National Film Act (RSC 1952, c. 185) which provides for a Board of Governors of nine members—a Government Film Commissioner, appointed by the Governor in Council, who is chairman of the Board, three members from the public service of Canada and five members from outside the public service. The Board reports to Parliament through the Secretary of State. The Board is responsible for advising the Governor in Council on film activities and is authorized to produce and distribute films in the national interest and, in particular, films "designed to interpret Canada to Canadians and to other nations".

Department of National Health and Welfare.—This Department was established in October 1944 under authority of the Department of National Health and Welfare Act (RSC 1952, c. 74). It was originally formed as the Department of Health in 1919 and later became part of the Department of Pensions and National Health. That Department was replaced in 1944 by the Department of National Health and Welfare and the Department of Veterans Affairs.

The Department, headed by the Minister of National Health and Welfare, is administered by two Deputy Ministers. It is composed of: Central Services which include the Research and Statistics Directorate, the Information Services Division and General Counsel; the Administration Branch; and seven other Branches—Health Services, Health Insurance and Resources, Medical Services, Food and Drug, Income Security, Welfare Assistance and Services and Special Programmes. The health Branches come under the Deputy Minister of National Health who also carries responsibility arising out of Canada's role in the international health field. The welfare Branches are the responsibility of the Deputy Minister of National Welfare.

The Department has charge of most matters relating to the promotion or preservation of the health, social security and social welfare of the people of Canada over which the Federal Parliament has jurisdiction. It administers the Acts listed in Sect. 4, p. 151, and is also responsible for: the administration of the National Health Grants Program under which grants are made available to the provinces for the development and extension of health services; the federal aspects of emergency health and welfare services; health and safety in the peaceful uses of atomic energy and other sources of radiation affecting the population; the provision of health, medical and hospital services to Indians and Eskimos and to other elements of the population in the Yukon and Northwest Territories; the provision of assistance and consultative services to other government Departments and to the provinces upon request on aerospace medicine and safety, blindness control, child and maternal health, chronic illness and aging, environmental health, mental health, dental health, nursing, medical rehabilitation, bacteriology, virology, parasitology and clinical chemistry, zoonoses, nutrition and health facilities design; the operation of a drug adverse reaction reporting program, a central clearing-house for the Canadian Poison Control Centres and a Consumer Division; the inspection and medical care of immigrants and seamen and the supervision of public health facilities on railway, water and other forms of transportation; the enforcement of regulations of the International Joint Commission relating to public health; the promotion and conservation of the health of government employees; advising the Department of Transport on the physical standards of licensed aviation personnel; the provision of medical services for and in conjunction with the Canadian Coast Guard Service; the collection, publication and distribution, subject to the provisions of the Statistics Act, of information relating to public health, improved sanitation and social and industrial conditions affecting the health of Canadians. It co-ordinates and assists international welfare activities in which Canada is engaged and administers a system of grants to the provinces for professional welfare training, welfare research and general welfare services.

National Library.—The National Library came formally into existence on Jan. 1, 1953, with the proclamation of the National Library Act (RSC 1952, c. 330). It publishes *Canadiana*, a monthly catalogue of new publications relating to Canada, with an annual cumulation. The Library also publishes other bibliographies. Its Reference Division maintains the *National Union Catalogue*, which embodies the author catalogues of the major libraries in the ten provinces and is thus a key to the book collections of the whole country. The Library's own bookstock now totals about 400,000 volumes. The National Librarian reports to Parliament through the Secretary of State.

National Parole Board.—The establishment of the National Parole Board, which was formed in January 1959, is authorized by the Parole Act (SC 1953, c. 38) by which it is given absolute jurisdiction over all matters of parole. It is composed of a chairman and four members appointed by Order in Council for a ten-year period. The Board reports to Parliament through the Solicitor General of Canada.

Department of National Revenue.—From Confederation until May 1918, customs and inland revenue Acts were administered by separate departments; after that date they were amalgamated under one Minister as the Department of Customs and Inland Revenue. In 1921 the name was changed to the Department of Customs and Excise. In April 1924 collection of income taxes was placed under the Minister of Customs and Excise and, under the Department of National Revenue Act, 1927, the Department became known as the Department of National Revenue.

The Customs and Excise Division of the Department is responsible for the assessment and collection of customs and excise duties as well as of sales and excise taxes. The Taxation Division is responsible for the assessment and collection of income taxes, gift tax, old age security tax, Part I of the Canada Pension Plan, and estate taxes for Canada and all provinces, with certain exceptions, through its 29 district taxation offices and its Taxation Data Centre.

The Minister of National Revenue is responsible to Parliament for the Tax Appeal Board.

Office of the Chief Electoral Officer.—This Office was established in 1920 under the provisions of the Dominion Elections Act, now the Canada Elections Act (RSC 1960, c. 39, and amendments thereto), and is responsible for the conduct of all federal elections as well as the elections of members of the Northwest Territories Council and of the Yukon Territory Council. In addition, it conducts any vote taken under the Canada Temperance Act. The Chief Electoral Officer is responsible directly to Parliament, the Secretary of State acting as spokesman for him in the Cabinet and the House of Commons.

Office of the Comptroller of the Treasury.—The Comptroller of the Treasury is an officer of the Department of Finance appointed by the Governor in Council. Under the authority of the Financial Administration Act, he has the statutory responsibility of ensuring that no payment out of the Consolidated Revenue Fund is made for a purpose not authorized by or in excess of an amount appropriated by Parliament and that all relevant executive regulations are observed. For this purpose, he conducts a pre-audit of all payments except those under the Travel Regulations. He also provides a cheque-issue and accounting service for all departments and is responsible for the preparation of the *Public Accounts* and other financial statements of the government.

Office of the Representation Commissioner.—This Office was established in 1963 under the provisions of the Representation Commissioner Act (SC 1963, c. 40) and is responsible for preparing maps showing the distribution of population in each province and setting out alternative proposals respecting the boundaries of electoral districts in each province. In addition, it is required to make a review and study methods of registration of electors and absentee voting used in elections of other countries. The Secretary of State acts as spokesman for the Office in the Cabinet and the House of Commons.

Post Office Department.—Administration and operation of the Canada Post Office, by virtue of the Post Office Act (RSC 1952, c. 212) and under the Postmaster General, includes all phases of postal activity, personnel, mail handling, transportation of mails by land, water, rail and air and the direction and control of financial services including the operation of money order and savings bank business.

Privy Council Office.—For administrative purposes, the Privy Council Office is regarded as a Department of Government under the Prime Minister. The Clerk of the Privy Council, under whose direction its functions are carried out, is considered as a Deputy Head and takes precedence among the chief officers of the Public Service. The authority of the Privy Council Office is to be found in Sects. 11 and 130 of the British North America Act, 1867, which constituted a Council to aid and advise in the government of Canada to be styled the Queen's Privy Council for Canada. In 1940, upon the wartime development of Cabinet committees and the consequent need for orderly secretarial procedures such as agenda, explanatory memoranda and minutes, the Principal Secretary in the Prime Minister's Office was designated Clerk of the Privy Council and First Secretary to the Cabinet. Since 1946, the Privy Council Office has been further reorganized, developed and enlarged and certain administrative functions of the Privy Council Office and the Prime Minister's Office have been closely integrated in the interests of efficiency and economy.

The organization of the Privy Council Office at present consists primarily of the Privy Council Section concerned with the examination of submissions to the Governor in Council, preparation of draft orders and regulations, circulation and filing of approved orders, and the duties of editing, registering and publishing the federal statutory regulations in Part II of the *Canada Gazette*; the Cabinet Section dealing with secretarial work for the Cabinet and for Cabinet committees and interdepartmental committees, such as the preparation and circulation of agenda and necessary documents to Ministers and recording and circulating decisions, liaison with departments and agencies of government, and the preparation of material for the Prime Minister; the Science Secretariat established in 1964 to assemble and analyse information about the Government's scientific programs and their inter-relation with other scientific activities throughout Canada; the Special Planning Secretariat established in 1965 to assess the extent and nature of the problems of poverty and inadequate opportunities in Canada, to analyse existing federal measures and to develop proposals for future federal programs aimed at overcoming inadequate economic and social opportunities; and the Special Secretariat on Bilingualism established in 1966.

The Office of the Prime Minister is organized as a Secretariat associated with the Privy Council Office and includes members of the Prime Minister's personal staff responsible for general secretarial duties, the drafting of letters, the arrangement of appointments to interview the Prime Minister or for his public appearances or for the release of his statements on matters of public interest, and assisting the Prime Minister in his parliamentary duties.

Public Archives.—The Public Archives was founded in 1872 and is administered under the Public Archives Act (RSC 1952, c. 222) by the Dominion Archivist who has the rank of a Deputy Minister and reports to Parliament through the Secretary of State. Its purpose is to assemble and make available to the public a comprehensive collection of historical source material relating to the history of Canada. Major emphasis is placed on official records of the Government and the personal papers of political leaders and other prominent figures. These are supplemented by copies of many records in the British and French archives that relate to Canada, a fine map collection, a historical library, and many prints, paintings and photographs. The Archives operates a large Records Centre in Ottawa which provides accommodation for departmental records that are seldom used and also serves as a sorting centre, preserving papers of long-term interest from obsolete files and marking useless material for destruction. Regional centres are located in Toronto and Montreal. The Archives also operates the Government's Central Microfilm Unit, which is housed in the new National Library and Archives Building.

Under the terms of the Laurier House Act (RSC 1952, c. 163) the Public Archives is responsible for the administration of Laurier House as a museum.

Public Service Commission.—Arrangements were made for civil service appointments under the first Civil Service Act of 1868 but the first Civil Service Commission was created only in 1908. This established the beginnings of the merit system which is today the cornerstone of personnel administration in the public service. The Act of 1918 gave the Commission authority to control recruitment, selection, appointment, classification and organization and to recommend rates of pay. The next Civil Service Act, passed in 1961, strengthened the principles of the merit system, clarified the Commission's role in other areas of personnel administration, and gave the staff associations the right to be consulted on matters about remuneration and conditions of employment.

The Public Service Employment Act which came into force on Mar. 13, 1967, redefined the Commission's role as the central staffing agency and extended its authority to the public service, covering certain groups of employees exempt from the previous Acts. The public service is specified in Schedule A of the Public Service Staff Relations Act. It does not include Crown corporations, such as the Canadian Broadcasting Corporation, the Central Mortgage and Housing Corporation, the Canadian National Railways and Air Canada. The new Act also reaffirmed the merit principle, at the same time permitting delegation of the Commission's authority, although not its responsibility, to Parliament. Under the Act, the Commission was relieved of responsibility for recommending rates of pay and conditions of service to the Government, for classification, and for consultation with staff associations on matters that are now the subject of collective bargaining.

Department of Public Works.—The Department was constituted in 1867 and operates under the legislative authority of the Public Works Act of Parliament. It is responsible for the management and direction of the public works of Canada and, except as specifically provided in other Acts, attends to the construction and maintenance of public buildings, wharves, piers, roads and bridges and the undertaking of dredging and protection work. Federal Government interest in the Trans-Canada Highway and the Northwest Highway System is also handled by the Department. The Department has six Regional Offices—one each at Halifax, Montreal, Ottawa, Toronto, Edmonton and Vancouver—and District Offices at other key points across the country are also maintained. Departmental organization includes the following Directorates: Programme Planning, Design, Operations, Administrative Services, Financial Services, Personnel Administration, Information Services, Fire Prevention and Legal Services.

The Minister of Public Works is also responsible to Parliament for the National Capital Commission.

Department of the Registrar General.—This Department was established by the Government Organization Act, 1966 (SC 1966, c. 25) which was proclaimed effective Oct. 1, 1966. It is presided over by the Registrar General of Canada whose duties include all matters over which the Parliament of Canada has jurisdiction relating to combines, mergers, monopolies and restraint of trade; patents, copyrights and trade marks; bankruptcy and insolvency; and corporate affairs. His functions also include the registration of all instruments issued under the Great Seal of Canada, under the Seal of the Registrar General of Canada, and most of the instruments issued under the Privy Seal of the Governor General.*

Royal Canadian Mounted Police.—The Royal Canadian Mounted Police, a civil force maintained by the Federal Government, was organized in 1873 as the North-West Mounted Police. It now operates under the Royal Canadian Mounted Police Act, 1959 and is responsible for enforcing federal laws throughout Canada. By agreement with the governments of eight provinces (all provinces except Ontario and Quebec) it is also responsible for enforcing provincial laws within those provinces and for policing many district municipalities, cities and towns. A Commissioner, appointed by the Governor in Council, has the control and management of the Force and of all matters connected therewith; he functions under the direction of the Solicitor General of Canada.

Department of the Secretary of State.—The duties, powers and functions of the Secretary of State of Canada extend to and include all matters over which the Parliament of Canada has jurisdiction, not by law assigned to any other department, branch or agency of the Government of Canada, relating to: citizenship; elections; State ceremonial, the conduct of State correspondence and the custody of State records and documents; the encouragement of the literary, visual and performing arts, learning and cultural activities; and libraries, archives, historical resources, museums, galleries, theatres, films and broadcasting.

The responsibilities of the Department of the Secretary of State include those pertaining to the administration of the following branches: Citizenship; Citizenship Registration; Education Support; National Museum of Canada; State Protocol and Parliamentary Returns; and Translation Bureau.

The Secretary of State of Canada reports to Parliament for the Centennial Commission, the National Arts Centre Corporation, the National Film Board, the National Library, the Public Archives, the National Gallery and the Office of the Queen's Printer (Publisher), and is spokesman in the Cabinet and the House of Commons for the Board of Broadcast Governors, the Canada Council, the Canadian Broadcasting Corporation, the Public Service Commission, the Office of the Chief Electoral Officer and the Office of the Representation Commissioner.

Department of the Solicitor General.—Before 1936, the Office of the Solicitor General was either a Cabinet post or a Ministerial post outside the Cabinet. From 1936 to 1945 the position did not exist, the duties of the Office being wholly absorbed by the Attorney General of Canada. The Solicitor General Act, 1945 (RSC 1952, c. 253) re-established the Solicitor General as a Cabinet officer and provided that "... The Solicitor General shall assist the Minister of Justice in the Counsel

* For transfer of these duties to the Department of Consumer and Corporate Affairs upon the establishment of the latter by Act of Parliament assented to on Nov. 27, 1967, see Appendix.

work of the Department of Justice, and shall be charged with such other duties as are at any time assigned to him by the Governor-in-Council". This legislation was repealed by the Government Organization Act, 1966 (SC 1966, c. 25), which created a new Department of the Solicitor General and assigned to the Solicitor General of Canada responsibility for the Royal Canadian Mounted Police and the Canadian Penitentiary Service. The Solicitor General also reports to Parliament for the National Parole Board, which is an independent agency. With this new legislation, the Solicitor General of Canada becomes the Cabinet Minister with primary responsibility in the fields of crime and correction.

Tariff Board.—Constituted in 1931, the Board derives its duties and powers from three statutes: the Tariff Board Act (RSC 1952, c. 261, as amended); the Customs Act (RSC 1952, c. 58, as amended); and the Excise Tax Act (RSC 1952, c. 100, as amended).

Under the Tariff Board Act, the Board makes inquiry into and reports upon any matter in relation to goods that, if brought into Canada, are subject to or exempt from duties of customs or excise taxes. Reports of the Board are tabled in Parliament by the Minister of Finance. It is also the duty of the Board to hold an inquiry under Sect. 14 of the Customs Tariff and to inquire into any other matter in relation to the trade and commerce of Canada that the Governor in Council sees fit to refer to the Board for inquiry and report.

Under the provisions of the Customs Act and the Excise Tax Act, the Tariff Board acts as a court to hear appeals from rulings of the Department of National Revenue, Customs and Excise Division, in respect of excise taxes, tariff classification, value for duty, and drawback of customs duties. Declarations of the Board on appeals on questions of fact are final and conclusive but the Acts contain provisions for appeal on questions of law to the Exchequer Court of Canada.

Tax Appeal Board.—The Tax Appeal Board (created in 1946 as the Income Tax Appeal Board) now operates under the Income Tax Act (RSC 1952, c. 148 as amended). The Board is declared by statute to be a court of record and has jurisdiction to hear and determine appeals by taxpayers against their assessment under the Income Tax Act and also appeals under the Estate Tax Act. An appeal lies from the Board to the Exchequer Court of Canada and a further appeal from that court to the Supreme Court of Canada. The Board consists of a chairman, an assistant chairman and four other members. Its offices are located at Ottawa and it hears appeals at the principal centres throughout Canada approximately twice a year and at the main centres, such as Montreal and Toronto, six times a year. The Board is under the jurisdiction of the Minister of National Revenue but is independent of the Department of National Revenue.

Department of Trade and Commerce.—The Department of Trade and Commerce has consistently expanded its services to the business community since becoming functional in 1892, almost five years after establishment was approved by an Act of Parliament. Today the Department has 227 Trade Commissioners on its staff serving at headquarters in Ottawa and at 70 posts in 49 countries abroad; this figure includes Assistant Trade Commissioners in training as well as agricultural, fisheries, timber and publicity specialists. Trade Commissioners carry such titles as Minister (Commercial), Commercial Counsellor or Commercial Secretary and hold diplomatic status if they are members of a mission maintained by the Department of External Affairs.

The Department comprises three principal services: Trade Policy governs trade relations; External Trade Promotion is responsible for the Canadian Government Travel Bureau, the Canadian Government Exhibition Commission, the Trade Commissioner Service, and the Trade Publicity and Trade Fairs and Missions Branches; the Commodities and Industries Services incorporates the Agriculture and Fisheries Branch, Industrial Materials Branch, Manufacturing Industries and Engineering Branch, and the Transportation and Trade Services Branch.

Crown corporations and agencies that report to Parliament through the Minister of Trade and Commerce include the Dominion Bureau of Statistics, the Export Credits Insurance Corporation, the Canadian Corporation for the 1967 World Exhibition, the Canadian Government Participation, 1967 Exhibition, and the Canadian Wheat Board.

Department of Transport.—The Department was created on Nov. 2, 1936 from the former Departments of Marine and of Railways and Canals, and the Civil Aviation Branch of the Department of National Defence (RSC 1952, c. 79).

The work of the Department consists of two main Services—Marine and Air. Marine Service operations include aids to navigation, nautical and pilotage services, marine agencies, secondary canals, steamship inspection, the Canadian Coast Guard, and direct supervision over 300 public harbours; 11 other harbours come under the supervision of the Department but are administered by commissions. Air Services cover the operation of the Telecommunications and Electronics, Civil Aviation, Airports and Field Operations, Construction Engineering and Architectural, and Meteorological Branches. The work of the Telecommunications and Electronics Branch includes the administration of national and international radio laws, regulations and agreements; it is also responsible for the installation, maintenance and operation of aeronautical, marine and meteorological radio-communication stations and of radio and electronics aids to marine and air navigation.

The Minister of Transport is responsible to Parliament for the following boards, commissions and Crown companies: Air Canada, the Canadian Transport Commission, the National Harbours Board, the St. Lawrence Seaway Authority, the Canadian Overseas Telecommunication Corporation, the Canadian National Railways and the Atlantic Development Board.

Treasury Board.—The Treasury Board was first established as a committee of the Queen's Privy Council for Canada by PC 3 of July 2, 1867; it was subsequently made statutory in 1869. With the Minister of Finance as Chairman, and the administrative staff (including the Secretary of the Board) provided by the Department of Finance, the Board has, from its inception, exercised surveillance, on behalf of the Governor in Council, over the financial affairs of the various departments and agencies of the Government.

By the Government Organization Act, 1966 (SC 1966, c. 25), these historic, organic links between the Minister and the Department of Finance and the Treasury Board were altered in a number of important respects. The Board was established as a separate department of government under its own Minister, the President of the Treasury Board. The membership of the Board was enlarged from six to seven, with the Minister of Finance serving *ex officio* as a member, together with five additional Privy Councillors designated by the Governor in Council. The President of the Board, in addition to assuming the duties formerly vested in the Minister of Finance as Chairman of the Board, became the Minister responsible for the new Department and, in this capacity, was given, for the first time, power to act on behalf of the Board in intervals between Board meetings. This marked an important step in the evolution of the Board from a committee of Ministers to a department of government, with certain managerial and administrative responsibilities in its own right.

The powers and duties of the Board continue to be governed by the Financial Administration Act (RSC 1952, c. 116) which was also amended in a number of important respects in 1966. The effect of these amendments was to establish the Treasury Board, even more clearly than before, as the agency of government chiefly responsible for formulating central management policy, issuing directives and guidelines, and monitoring departmental performance in a wide variety of fields. These include most financial management functions, e.g., short- and long-range expenditure forecasting, program analysis, estimates preparation, supervision and control of expenditures, leases, contracts, financial commitments, etc. Responsibility for providing leadership and stimulus to improved management performance and to the application of modern, efficient administrative methods within departments and agencies was also vested, for the first time, explicitly in the Board.

Possibly the most important change in the duties and responsibilities of the Board was in the field of personnel management. This resulted in part from the recommendations of the Royal Commission on Government Organization and in part from the designation of the Board as the principal agent of the employer in collective bargaining—a role assigned to it by the provisions of the Public Service Staff Relations Act of 1966. The Board had assigned to it, in addition to its previous duties relating to organization and establishment control, exclusive responsibility for classification, rates of pay and conditions of employment, a responsibility previously shared with the Public Service Commission, and for determining generally the policy governing personnel management in the public service. The legislation assigning these new responsibilities to the Board contemplates and provides for extensive delegation of the Board's authority to the operating departments, under terms and conditions established by the Board.

Department of Veterans Affairs.—This Department, established in 1944 (RSC 1952, c. 80), is concerned exclusively with the welfare of veterans and with the dependants of veterans and of those who died on active service. The Department provides treatment services (hospital, medical, dental and prosthetic), welfare services, education assistance, life insurance, and land settlement and home construction assistance. The Veterans' Bureau assists veterans in the preparation and presentation of pension claims.

The Canadian Pension Commission established by the Pension Act (RSC 1952, c. 207), and the War Veterans Allowance Board established by the War Veterans Allowance Act (RSC 1952, c. 340) also report to Parliament through the Minister of Veterans Affairs.

The Department has treatment institutions and facilities in a number of urban centres. It also maintains, in large cities across Canada, administrative offices, which are shared with the Canadian Pension Commission and the War Veterans Allowance Board, and an office in London, England.

War Veterans Allowance Board.—This Board, established under the authority of the War Veterans Allowance Act, 1930 (RSC 1952, c. 340 as amended) is a quasi-judicial body consisting of eight members, including a Chairman and a Deputy-Chairman, appointed by the Governor in Council. The Board administers the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act. It reports to Parliament through the Minister of Veterans Affairs. Its functions include the responsibility of ensuring that the 19 District Authorities, located in various regions throughout Canada, interpret the legislation in a fair, reasonable and equitable manner. It is also an appeal body which may consider the appeal of an appellant against the decision of a District Authority.

Section 3.—Crown Corporations

The Crown corporation form of public enterprise is not a new type of organization in Canada but in recent years, as the work of government has become more complex, greater reliance has been placed on it as the appropriate instrument for administering and managing many public services in which business enterprise and public accountability must be combined.

The use of the corporate device to harmonize public responsibility in the development of economic resources and the provision of public services with the pursuit of commercial and industrial objectives has led to the adoption of many different forms and formulas of management. The most usual practice has been to set up a corporation under the provisions of a special Act of Parliament which defines its purposes and sets forth its powers and responsibilities. However, during World War II the Minister of Munitions and Supply was authorized to procure the incorporation of companies under the federal Companies Act, 1934, or under any provincial Companies Act to which he might delegate any of the powers conferred on him under the Department of Munitions and Supply Act or any Order in Council. Under this legislation about 28 companies were created to serve a wide variety of purposes; most of these companies have since been wound up.

Following the successful experience during the war years in relying on the Companies Act for the establishment of Crown companies, similar incorporating powers were granted by an amendment to the Research Council Act and have been incorporated in the Atomic Energy Control and the Defence Production Acts.

In 1946 the Government Companies Operation Act was passed to regulate the operation of companies formed under the Companies Act. However, it was applicable only to a relatively small number of companies and, in order to establish a more uniform system of financial and budgetary control and of accounting, auditing and reporting for Crown corporations generally, Part VIII of the Financial Administration Act was enacted in 1951 and brought into operation by proclamation on Oct. 1, 1952. Upon its enactment the financial provisions of the Government Companies Operation Act were repealed.

One of the more interesting features of the later legislation is the attempt that has been made to define and classify Crown corporations.* The Act defines a Crown corporation as a corporation that is ultimately accountable, through a Minister, to Parliament for the conduct of its affairs and establishes three classes of corporation—departmental, agency and proprietary.

Departmental Corporations.—A departmental corporation is defined as a Crown corporation that is a servant or agent of Her Majesty in right of Canada and is responsible for administrative, supervisory or regulatory services of a governmental nature. The following departmental corporations are listed in Schedule B to the Financial Administration Act:—

Agricultural Stabilization Board (formerly Agricultural Prices Support Board)
Atlantic Development Board
Atomic Energy Control Board
Director of Soldier Settlement
The Director, The Veterans' Land Act
Dominion Coal Board
Economic Council of Canada
Fisheries Prices Support Board
Municipal Development and Loan Board
National Gallery of Canada
National Research Council
Unemployment Insurance Commission.

* Not all Crown corporations are subject to the provisions of the Financial Administration Act. For example, the Canadian Wheat Board, the Bank of Canada and its subsidiary the Industrial Development Bank, because of the special nature of their functions, are excluded from operations of the Crown corporations Part of the Act and are governed by their own Acts of incorporation as are also the Eastern Rockies Forest Conservation Board, a joint federal-provincial enterprise, and the Canadian Corporation for the 1967 World Exhibition. The Canada Council was set up under the Canada Council Act (assented to Mar. 28, 1957) as a Crown corporation but has been declared not an agency of the Crown and hence is not included in the Schedules to the Financial Administration Act; the same situation applies to the Science Council of Canada (assented to May 12, 1966), the Company of Young Canadians (assented to July 11, 1966) and the National Arts Centre Corporation (assented to July 15, 1966).

Agency Corporations.—An agency corporation is defined as a Crown corporation that is an agent of Her Majesty in right of Canada and is responsible for the management of trading or service operations on a quasi-commercial basis or for the management of procurement, construction or disposal activities on behalf of Her Majesty in right of Canada. The following agency corporations are listed in Schedule C to the Financial Administration Act:—

Atomic Energy of Canada Limited
Canadian Arsenals Limited
Canadian Commercial Corporation
Canadian Dairy Commission
Canadian Livestock Feed Board
Canadian National (West Indies) Steamships Limited (virtually inoperative)
Canadian Patents and Development Limited
Centennial Commission
Crown Assets Disposal Corporation
Defence Construction (1951) Limited
National Battlefields Commission
National Capital Commission (formerly Federal District Commission)
National Harbours Board
Northern Canada Power Commission.

Proprietary Corporations.—A proprietary corporation is defined as a Crown corporation that (1) is responsible for the management of lending or financial operations, or for the management of commercial or industrial operations involving the production of or dealing in goods and the supplying of services to the public, and (2) is ordinarily required to conduct its operations without parliamentary appropriations. The following proprietary corporations are listed in Schedule D to the Act:—

Air Canada (formerly Trans-Canada Air Lines)
Canada Deposit Insurance Corporation
Canadian Broadcasting Corporation
Canadian Overseas Telecommunication Corporation
Cape Breton Development Corporation
Central Mortgage and Housing Corporation
Eldorado Aviation Limited
Eldorado Mining and Refining Limited
Export Credits Insurance Corporation
Farm Credit Corporation (formerly Canadian Farm Loan Board)
National Railways, as defined in the Canadian National-Canadian Pacific Act, 1933
Northern Transportation Company Limited
Polymer Corporation Limited
St. Lawrence Seaway Authority
Seaway International Bridge Corporation Limited (formerly Cornwall International Bridge Company Limited), subsidiary to the St. Lawrence Seaway Authority.

Departmental corporations are governed by the provisions of the Financial Administration Act that are applicable to departments generally. Agency and proprietary corporations, however, are subject to the provisions of the Crown corporations Part of the Act, although, if there is any inconsistency between the provisions of that Part and those of any other Act applicable to a corporation, the Act provides that the latter prevail. There is provision in the Part for the control and regulation of such matters as corporation budgets and bank accounts, the turning over to the Receiver General of surplus money, limited loans for working-capital purposes, the awarding of contracts and the establishment of reserves, the keeping and auditing of accounts, and the preparation of financial statements and reports and their submission to Parliament through the appropriate Minister.

A further form of control is exercised by Parliament through the power to vote financial assistance. This may take different forms. For some corporations, capital may be provided by parliamentary grants, loans or advances that may subsequently be converted into capital stock or bonds; for others it may be by the issue of capital stock to be subscribed and paid for by the Government; or by the sale of bonds to either the Government or the public. A few corporations have financed all or a portion of their requirements from their own resources or earnings.

Prior to 1952, Crown corporations did not pay corporate income taxes. However, the Income Tax Act was later amended so that, in respect of financial years commencing after Jan. 1, 1952, proprietary Crown corporations pay taxes on income earned in the same manner as any privately owned corporation. One desirable result of this amendment is that the financial statements of these Crown companies are now more comparable with those of private industry, with which in some instances they are in competition, and thus it is easier to assess the relative efficiency of their operations.

The functions of the various Crown corporations are given briefly in the following paragraphs. For a number of them, further details are included in the Chapters dealing with the subjects concerned (see Index).

Agricultural Stabilization Board.—The Board was established in 1958 (SC 1957-58, c. 22) to administer the provisions of the Agricultural Stabilization Act. The Board reports to Parliament through the Minister of Agriculture and routine administrative matters are handled through departmental channels.

Air Canada.—Formerly Trans-Canada Air Lines, the Corporation was incorporated by Act of Parliament in 1937 to provide a publicly owned air transportation service, with powers to carry on its business throughout Canada and outside of Canada. Air Canada now maintains passenger, mail and commodity traffic services over nation-wide routes and also services to the United States, England, Scotland, Ireland, France, Switzerland, West Germany, Austria, Denmark, the U.S.S.R., Bermuda, the Bahamas, Jamaica, Antigua, Barbados and Trinidad. Air Canada is responsible to Parliament through the Minister of Transport.

Atlantic Development Board.—The Act establishing this Board (SC 1962-63, c. 10) received Royal Assent on Dec. 20, 1962. Under the Act and its amendments of 1963 and 1966, a \$150,000,000 Atlantic Development Fund was established that would contribute to the growth and development of the economy of the Atlantic region. The Act also required the Board, in consultation with the Economic Council of Canada to prepare an over-all co-ordinated plan for the growth of the region. The Board is composed of a chairman and ten other members appointed by the Governor in Council. At present, the Minister of National Health and Welfare acts as spokesman for the Board in the House of Commons.

Atomic Energy Control Board.—By Act of Parliament (RSC 1952, c. 11) proclaimed October 1946, the regulation and control of atomic energy in Canada was placed under the Atomic Energy Control Board. The Board reports to Parliament through the Minister of Energy, Mines and Resources.

Atomic Energy of Canada Limited.—This Crown company was incorporated in February 1952 under the Atomic Energy Control Act, 1946 (RSC 1952, c. 11) to take over from the National Research Council on Apr. 1, 1952 the operation of the Chalk River project. The main activities of the company are (a) the development of economic nuclear power, (b) scientific research and development in the atomic energy field, (c) the operation of nuclear reactors and (d) the production of radioactive isotopes and associated equipment such as Cobalt-60 beam therapy units for the treatment of cancer. The company reports to Parliament through the Minister of Energy, Mines and Resources.

Bank of Canada.—Legislation of 1934 (RSC 1952, c. 13) provided for the establishment of a central bank in Canada, the function of which is to regulate credit and currency, to control and protect the external value of the Canadian dollar and to stabilize the level of production, trade, prices and employment so far as may be possible within the scope of monetary action. The Bank acts as the fiscal agent of the Government of Canada, manages the public debt and has the sole right to issue notes for circulation in Canada. The Bank is managed by a Board of Directors appointed by the Government and composed of a Governor, a Deputy Governor and 12 Directors; the Deputy Minister of Finance is also a member of the Board. The Bank reports to Parliament through the Minister of Finance and is governed by its own Act of incorporation. (See footnote, p. 140.)

The Canada Council.—Established by Order in Council dated Apr. 15, 1957, this corporation, composed of a chairman, a vice-chairman and 19 other members, a director and an associate director, operates under the terms of the Canada Council Act, assented to Mar. 28, 1957. The function of the Council is to encourage the arts, humanities and social sciences in Canada, mainly through a broad program of fellowships and grants. Its principal sources of income are an annual grant of the Canadian Government, which amounted to \$17,000,000 for the year ending Mar. 31, 1968, and an Endowment Fund, originally of \$50,000,000, which has an annual yield of approximately \$3,500,000. In the making, managing and disposing of investments under the Act, the Council has the advice of an Investment Committee of five, including the chairman and another member of the Council. The proceedings of the Council are reported each year to Parliament through the Secretary of State. (See footnote, p. 140.)

Canada Deposit Insurance Corporation.—The Corporation was established by legislation (SC 1966-67, c. 70), which received Royal Assent on Feb. 17, 1967. It is empowered to insure Canadian currency deposits other than those of Canada, up to \$20,000 per person, in banks, federally incorporated trust and loan companies that accept deposits from the public, and in similar provincially incorporated institutions that are authorized by their provincial governments to apply for such insurance. The Corporation is also empowered to act as a lender of last resort for member institutions. The Board of the Corporation comprises a chairman, appointed by the Governor in Council, and four other directors who hold the positions of Governor of the Bank of Canada, Deputy Minister of Finance, Superintendent of Insurance and Inspector General of Banks.

Canadian Arsenals Limited.—This company was established under the Companies Act by Letters Patent dated Sept. 20, 1945 and is subject to the Government Companies Operation Act (RSC 1952, c. 133) and certain provisions of the Financial Administration Act (RSC 1952, c. 116). The company was set up to take over and operate Crown-owned plants and equipment. It manufactures small arms and ammunition components and has extensive facilities for the filling and assembly of artillery ammunition, mines, bombs, grenades, rockets and other specialties up to torpedo warheads. Its Divisions, together with the locations of their plants, are as follows: Small Arms Division (Long Branch, Ont.) and Filling Division (St. Paul l'Ermite, Que.). The company reports to Parliament through the Minister of Defence Production.

Canadian Broadcasting Corporation.—The CBC functions under the Broadcasting Act, 1958, which continues the Corporation as a Crown agency charged with the operation of a national broadcasting service. It has the authority to maintain and operate broadcasting stations and networks and to originate and secure programs from within and outside Canada. This national radio and television service is financed through annual grants from Parliament and revenues from commercial operations.

The Corporation consists of 11 directors appointed by the Governor in Council and chosen to give representation to the principal geographical divisions of the country. The Secretary of State acts as spokesman for the Corporation in the Cabinet and the House of Commons. The President and Vice President are full-time executives appointed for a period of seven years; the other nine Directors are appointed for periods of three years and may serve two consecutive terms. The President is the chief executive of the Corporation and, with the Vice President, is responsible for the conduct of the affairs of the Corporation. As the chief executive, the President receives, interprets and applies the policies and directives of the Directors of the Corporation and establishes administrative and operating policies to control the activities of all operating units—English Networks, French Networks, Regional Broadcasting and the International Service—and of corporate staff departments—Programming, Planning, Engineering, Finance and Administration.

In practice, attention of the President is directed primarily to the broad fields of corporate policy, long-range planning and financing. He reports on activities to the Directors of the Corporation and the conduct of relations with Parliament, the Board of Broadcast Governors and the public. The Vice President assists the President in his role of chief executive by assuming primary responsibility for the current operations of the Corporation.

The Corporation's Head Office is situated in Ottawa. Headquarters for English Networks is located in Toronto and for French Networks in Montreal and Regional Headquarters are situated in St. John's for Newfoundland, Halifax for the Maritime Provinces, Winnipeg for the Prairie Provinces, and Vancouver for British Columbia. Headquarters for the Northern and Armed Forces Services is in Ottawa and that for the International Service is in Montreal.

Canadian Commercial Corporation.—Established in 1946 by Act of Parliament, the Canadian Commercial Corporation is wholly owned by the Government of Canada. Initially it assumed the undertakings of the then Canadian Export Board covering procurement in Canada of goods and services on behalf of foreign Governments and United Nations relief agencies. In 1947 responsibility for procurement of the requirements of the Department of National Defence was transferred from the Department of Reconstruction and Supply to the Corporation which fulfilled these additional functions until the formation of the Department of Defence Production in 1951. In 1963 the staff of the Corporation was integrated with that of the Department of Defence Production which now provides all the management and services required by the Corporation.

The Corporation continues to act primarily as the Canadian Government contracting and procurement agency on behalf of foreign countries desirous of purchasing defence or other supplies and services from Canada on a government-to-government basis. It reports to Parliament through the Minister of Defence Production.

Canadian Dairy Commission.—This Commission, which reports to Parliament through the Minister of Agriculture, was established on Dec. 2, 1966 (SC 1966, c. 34) to provide efficient producers of milk and cream with the opportunity of obtaining a fair return for their labour and investment and to provide consumers of dairy products with a continuous and adequate supply of dairy products of high quality. The Commission has three members appointed by the Governor in Council and operates with the advisory assistance of a nine-member Consultative Committee appointed by the Minister.

Canadian Corporation for the 1967 World Exhibition.—This Corporation was established by Act of Parliament (SC 1962-63, c. 12) to plan, organize, hold and administer the Canadian Universal and International Exhibition, Montreal 1967, which was held during the period Apr. 28 to Oct. 29, 1967. The Exhibition was of the First Category as described in the rules of the International Bureau of Exhibitions and was the first of this type to be held in the Americas. The Corporation was headed by a commissioner general, a deputy commissioner general and a general manager and reported to Parliament through the Minister of Trade and Commerce.

Expo 67, as the Exhibition was popularly known, was situated on two man-made islands in the St. Lawrence River—Île Notre Dame and Île Ste. Hélène—which were linked to a third area on MacKay Pier. The Exhibition during its six months of activity attracted more than 50,000,000 visitors, a record for any Exhibition held for a similar period.

The Corporation's existence will terminate during 1968 and its assets disposed of among the three participating governments. The Mayor of Montreal announced that it is the intention of the City of Montreal to utilize the two islands for the conduct of an annual exhibition.

Canadian Livestock Feed Board.—This corporation was established by SC 1966-67, c. 52 to provide assistance to livestock feeders in Eastern Canada and British Columbia by ensuring availability of feed grain, adequate storage space and reasonable stability in feed grain prices. The Board may consist of three to five members appointed by the Governor in Council and will have the assistance of an Advisory Committee of five to seven members, also appointed by the Governor in Council. The Board reports to Parliament through the Minister of Forestry and Rural Development.

Canadian National Railways.—The Canadian National Railway Company was incorporated (SC 1919, c. 13) to operate and manage a national system of railways, including the Canadian Northern Railway System, the Canadian Government Railways and all lines entrusted to it by Order in Council. In 1923 the Grand Trunk Railway Company of Canada was amalgamated with the Canadian National Railway Company and since 1923 a number of railway lines acquired by the Government have been entrusted to the Company for operation and management, including the Newfoundland Railway and steamship services in 1949, the Temiscouata Railway in 1950, and the Hudson Bay Railway and the Northwest Communication System in 1958. The Canadian National Railways Act, 1919 was repealed in 1955 and the Canadian National Railways Act (SC 1955, c. 29) substituted therefor.

The Canadian National Railway Company is controlled by a chairman and board of directors appointed by the Governor in Council, who report to Parliament through the Minister of Transport.

Canadian Overseas Telecommunication Corporation.—This Crown company was created on Dec. 10, 1949 by Act of Parliament (RSC 1952, c. 42) to acquire for public operation external telecommunication assets in Canada, in keeping with the Commonwealth Telegraph Agreement signed May 11, 1948. This Agreement was designed to bring about the consolidation and strengthening of the radio and cable communication systems of the Commonwealth. The Corporation is responsible to Parliament through the Minister of Transport.

Canadian Patents and Development Limited.—Canadian Patents and Development Limited is a Crown corporation set up in 1947, pursuant to authority granted in an amendment to the Research Council Act passed in 1946. The primary purpose of the company, which is a subsidiary of the National Research Council, is to make available to industry, through licensing arrangements commercial inventions originating in the NRC laboratories. The company also handles inventions referred to it from the research establishments of Federal Government departments and agencies, Canadian universities, and provincial research councils. Any profits that the company may derive from licensing arrangements are used for further research and development. The company's Board of Directors is composed of representatives of the National Research Council of Canada, government departments and agencies, industry and the universities. The company reports to Parliament through the Minister of Industry in his capacity as Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Canadian Wheat Board.—The Board was incorporated in 1935 under the Canadian Wheat Board Act to market, in an orderly manner, in the interprovincial and export trade, grain grown in Canada. Its powers include authority to buy, take delivery of, store, transfer, sell, ship or otherwise dispose of grain. Except as directed by the Governor in Council, the Board was not originally authorized to buy grain other than wheat but, since Aug. 1, 1949, it may also buy oats and barley if authorized to do so by Regulation approved by the Governor in Council. Only grain produced in the designated area, which includes Manitoba, Saskatchewan, Alberta and parts of British Columbia and Ontario, is purchased by the Board, which controls the delivery of grain into elevators and railway cars in that area as well as the interprovincial movement and export of wheat, oats and barley generally. The Board is governed by its own Act of incorporation (see footnote, p. 140). It reports to Parliament through the Minister of Trade and Commerce.

Cape Breton Development Corporation.—By agreement between the Governments of Canada and Nova Scotia, this Crown corporation was established by Act of Parliament (SC 1967, c. 6), assented to on July 7, 1967. Its functions are first to acquire the interests of the major coal producer in the Sydney coalfield and then to reorganize and operate the mines with a view to the rationalization of coal production therefrom and the progressive withdrawal of the Corporation from such production in accordance with a plan to be submitted for the approval of the Governor in Council within one year. The plan should take into account progress in providing employment outside the coal-producing industry and in broadening the base of the Island's economy.

The Corporation consists of a Board of Directors comprised of a chairman and a president appointed by the Governor in Council after consultation with the Lieutenant-Governor in Council of Nova Scotia, and five other directors, two of whom are appointed on the recommendation of the Lieutenant-Governor in Council of Nova Scotia. The Corporation is responsible to Parliament through the Minister of Energy, Mines and Resources.

Centennial Commission.—The Centennial Commission is a Crown corporation established by Parliament (SC 1960-61, c. 60, as amended) and responsible for the co-ordination and administration of projects relating to the Centennial of Confederation in Canada. It consists of a commissioner, an associate commissioner and not more than 12 directors, each of whom is appointed by the Governor in Council. The Commission is responsible to Parliament through the Secretary of State.

Central Mortgage and Housing Corporation.—This Corporation was incorporated by Act of Parliament (RSC 1952, c. 46) in December 1945 to administer the National Housing Acts. Under the National Housing Act, 1954 (SC 1953-54, c. 23, as amended), the Corporation insures mortgage loans made by approved lenders and makes direct loans for new and existing home-ownership housing, new rental housing and existing home-ownership and rental housing in designated urban renewal areas; guarantees home improvement loans made by banks; undertakes subsidized rental housing projects and land assembly developments under federal-provincial arrangements; offers loans and subsidies for public housing projects; makes loans for land assembly projects to be used for public housing; makes loans to non-profit housing companies for low-rental housing projects; makes loans for students' housing projects and to provinces and municipalities for sewage treatment projects designed to eliminate water and soil pollution; makes contributions and loans to provinces and municipalities for urban renewal operations; conducts housing research; encourages urban planning and owns and manages rental housing units including those built for war workers and veterans. The Corporation arranges for and supervises construction of housing projects on behalf of the Department of National Defence and other government departments and agencies. The Corporation is responsible to Parliament through the Minister of Labour.

Company of Young Canadians.—The Act establishing this corporation (SC 1966, c. 36) was assented to on July 11, 1966. The corporation consists of a Council of the Company and persons who are volunteer-members. The Council has 15 members, 10 of whom are elected by the volunteer-members and five of whom are appointed by the Governor in Council. Term of office for both elected and appointed members is three years. The Act provides for the establishment of an Interim Council of not more than 20 members to hold office until the members of the Council are elected or appointed. The objects of the Company are to support, encourage and develop programs for social, economic and community development in Canada or abroad through voluntary service. The corporation reports to Parliament through the Prime Minister.

Crown Assets Disposal Corporation.—This Corporation, successor to War Assets Corporation, was established under the Surplus Crown Assets Act (RSC 1952, c. 260) and is subject to the Financial Administration Act (RSC 1952, c. 116). The Corporation's function is to dispose of surplus Crown assets. It is responsible to Parliament through the Minister of Defence Production.

Defence Construction (1951) Limited.—Defence Construction (1951) Limited, reporting to the Minister of National Defence, is the Crown agency that procures for the Department of National Defence the construction and repair of buildings, structures and engineering works and professional engineering and architectural services.

The forerunner of the present company, Defence Construction Limited, began its operation in November 1950 as a Crown agency responsible for awarding and supervising defence construction projects. Defence Construction (1951) Limited, incorporated July 12, 1951, under authority of the Defence Production Act, took over the responsibilities of the former agency. The company reported to the Minister of Trade and Commerce until Apr. 1, 1951, and from that date until Apr. 22, 1965 it reported to the Minister of Defence Production; it is now under the control and supervision of the Minister of National Defence.

The company's prime responsibility in carrying out all new construction and repair and renovation projects (except work under \$10,000 which is contracted for by the Department of National Defence via the Department of Defence Production) includes: participation in preparation of design; calling and reviewing of tenders; award and administration of contracts; supervision of construction work; and certification of progress claims for work completed. Activities cover four distinct spheres: defence projects in Canada for the Department of National Defence; all defence projects in Europe for the Department of National Defence under the North Atlantic Treaty Organization

Agreement; defence construction for the United States Government in Canada; and, by arrangement, acting as the contract agents or technical advisers on the rendering of assistance to other federal departments and agencies.

In addition to the head office located at Ottawa, branch offices are maintained at Halifax, Montreal, Toronto, Winnipeg and Vancouver in Canada and in Lahr, Germany.

Director of Soldier Settlement and Director of the Veterans' Land Act.—The Director of Soldier Settlement (under the Act of 1919) is also the Director of the Veterans' Land Act, and in each capacity is legally a corporation sole. For administrative purposes, however, the programs carried on under both Acts constitute integral parts of the services provided by the Department of Veterans Affairs.

Dominion Coal Board.—The Board, established as a department in 1947 by the Dominion Coal Board Act (RSC 1952, c. 86), has the responsibility of studying and recommending to the Government policies concerning the production, import, distribution and use of coal. The Chairman has the status of a Deputy Minister and the Board reports to Parliament through the Minister of Energy, Mines and Resources. The Board administers transportation and other subventions relating to coal and also administers loans authorized under the Coal Production Assistance Act (RSC 1952, c. 173, as amended).

Eastern Rockies Forest Conservation Board.—The Board was appointed in 1947 under the Eastern Rocky Mountain Forest Conservation Act which authorized an agreement between the Government of Canada and the Province of Alberta relating to the protection and conservation of the forests of that portion of the eastern slope of the Rocky Mountains which gives rise to the major tributaries of the Saskatchewan River. Its function is to determine the policy necessary to obtain the greatest possible flow of water in the Saskatchewan River system. The planning of programs of forest use and conservation is a joint duty of the Board and the provincial Forest Service; the administration of the conservation area is a function of the province. In April 1962, a Technical Co-ordinating Committee for Watershed Research was established to undertake study of the related needs defined by the Board. The Committee's programs, undertaken by seven co-operating agencies of the Federal and Alberta Governments, are co-ordinated by an officer of the federal Department of Forestry and Rural Development.

Funds for capital expenditures during the first seven years of the agreement were provided by the Federal Government with maintenance expenditures being paid by the Province of Alberta. In 1955 the province undertook the responsibility of financing both capital improvements and maintenance work. Currently, one member of the three-man Board is appointed by the Federal Government and the province has the right to appoint two members. The choice of one of the three members as Board chairman is vested in the province. The Board reports to Parliament through the Minister of Forestry and Rural Development. (See footnote, p. 140.)

Economic Council of Canada.—This corporation, established under legislation passed on Aug. 2 1963 (SC 1963, c. 11), consists of a full-time chairman and two full-time directors appointed for a term not to exceed seven years and not more than 25 additional members to serve part-time and without remuneration. The Council is to be as representative as possible of labour, agriculture and primary industries, secondary industry and commerce, and the general public. Its functions are to advise and recommend measures that will achieve in Canada the highest possible levels of employment and efficient production so that the country may enjoy a high and consistent rate of economic growth and that all Canadians may share in rising living standards; to carry on the duties of the former National Productivity Council which were to promote and expedite continuing improvement in productive efficiency in the various aspects of Canadian economic activity; and to publish an annual review of medium- and long-term economic prospects and problems. The Council reports to Parliament through the Prime Minister.

Eldorado Aviation Limited.—This company was incorporated Apr. 23, 1953 to carry air traffic, both passenger and freight, for Eldorado Mining and Refining Limited and its wholly owned subsidiary, Northern Transportation Company Limited. It reports to Parliament through the Minister of Energy, Mines and Resources.

Eldorado Mining and Refining Limited.—Set up in 1944 under the name of Eldorado Mining and Refining (1944) Limited (the date was omitted from the name in June 1952), the company's business is the mining and refining of uranium and the production of nuclear fuels in Canada. The company has also entered into contracts for the purchase of uranium concentrates from private producers in Canada. It reports to Parliament through the Minister of Energy, Mines and Resources.

Export Credits Insurance Corporation.—This Corporation commenced operations in 1945 under the Export Credits Insurance Act, 1944 (RSC 1952, c. 105, as amended) and is administered by a Board of Directors (including the Deputy Minister of Trade and Commerce and the Deputy Minister of Finance) with the advice of an Advisory Council. Its function is to insure Canadian exporters against non-payment by foreign buyers arising out of credit and political risks involved in foreign trade. The Corporation is also authorized to provide financing in respect of an export transaction involving extended credit terms. It reports to Parliament through the Minister of Trade and Commerce.

Farm Credit Corporation.—This Corporation was established on Oct. 5, 1959 (SC 1959, c. 43) for the purpose of providing for the extension of long-term mortgage credit to farmers. The Corporation also administers the Farm Machinery Syndicates Credit Act and is responsible to Parliament through the Minister of Agriculture.

Fisheries Prices Support Board.—The Board was set up under the Fisheries Prices Support Act of 1944 (RSC 1952, c. 120) to recommend to the Government price support measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and consists of a chairman, who is a senior officer of the Department of Fisheries, and five members chosen from private and co-operative firms in the industry. The Board has authority to buy fishery products and to sell or otherwise dispose of them or to pay producers the difference between a price prescribed by the Board and the average price the product actually commands.

Industrial Development Bank.—The Bank, a subsidiary of the Bank of Canada, was incorporated in 1944 to provide loans to industrial enterprises where financing is not available through recognized lending organizations. (See footnote, p. 140.)

Medical Research Council.—Established in November 1960, this Council operates as a virtually autonomous unit within the administrative framework of the National Research Council. It is composed of a chairman, a secretary and 15 members who serve for a three-year term, renewable once. The primary aim of the Council is the development of medical research and the support of medical research workers in the university centres of Canada. It reports to Parliament through the Minister of Industry in his capacity as Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

National Arts Centre Corporation.—The Act establishing this Corporation (SC 1966, c. 48) was assented to July 15, 1966. The Corporation consists of a Board of Trustees composed of a chairman, a vice-chairman, the Mayors of Ottawa and Hull, the Director of the Canada Council, the President of the Canadian Broadcasting Corporation, the Government Film Commissioner and nine other members appointed by the Governor in Council for terms not exceeding three years, except for the first appointees whose terms range from two to four years. The objects of the Corporation are to operate and maintain the National Arts Centre, to develop the performing arts in the National Capital Region and to assist the Canada Council in the development of the performing arts elsewhere in Canada. The Corporation reports to Parliament through the Secretary of State.

National Battlefields Commission.—This Commission was established by Act of Parliament in 1908 to preserve the Historic Battlefields at Quebec City. The Commission is composed of nine members, seven appointed by the Federal Government and one each by the Provinces of Ontario and Quebec. The Commission is supported by annual appropriations of the Federal Government and is responsible to Parliament through the Minister of Indian Affairs and Northern Development.

National Capital Commission.—This Commission is a Crown agency created by the National Capital Act (SC 1958, c. 37), proclaimed Feb. 6, 1959. It is the lineal descendant of the Federal District Commission. The Commission is served by a full-time paid chairman and comprises a total of 20 members representative of the ten provinces of Canada. Its work force fluctuates between 600 and 850, depending on the season.

Co-ordination and development of public lands in the National Capital Region are undertaken by direct planning and construction by the Commission's staff; by co-operation with municipalities; by provision of planning aid or financial assistance in municipal projects; and by advising the Department of Public Works on the siting and appearance of all Federal Government buildings in the 1,800-sq. mile National Capital Region. The Commission reports to Parliament through the Minister of Public Works.

National Gallery of Canada.—The beginnings of the National Gallery of Canada are associated with the founding of the Royal Canadian Academy of Arts in 1880. The Marquis of Lorne, then Governor General, had recommended and assisted the founding of the Academy. One of the three tasks he assigned to that institution was the establishment of a National Gallery at the seat of government. By Act of Parliament in 1913, re-enacted in 1951, the National Gallery was placed under the management of a Board of Trustees appointed by the Governor General in Council and now operates under the National Gallery Act (RSC 1952, c. 186). It is responsible to Parliament through the Secretary of State.

The first charge of the National Gallery is the development, care and display of the national art collections and the encouragement of the interest of the Canadian public in the fine arts. Its services to the public include a large reference library on the history of art and related subjects; an Exhibition Extension Branch through which travelling exhibitions, lectures and the showing of art films, and guided tours of the Gallery at Ottawa are conducted; the production of art publications and reproductions; and a National Conservation Research Laboratory.

National Harbours Board.—The Board was established by Act of Parliament in 1936. It is responsible for the administration of port facilities at the harbours of St. John's, Nfld.; Halifax, N.S.; Saint John, N.B.; Chicoutimi, Quebec, Trois-Rivières and Montreal, Que.; Vancouver, B.C.;

and Churchill, Man.; the Jacques Cartier and Champlain Bridges at Montreal, Que.; and the grain elevators at Prescott and Port Colborne, Ont. The Board reports to Parliament through the Minister of Transport.

National Research Council of Canada.—This is an agency of the Canadian Government established in 1916 to promote scientific and industrial research. The Council operates science and engineering laboratories in Ottawa, Halifax and Saskatoon; gives direct financial support to research carried out in Canadian university and industrial laboratories; sponsors Associate Committees co-ordinating research on specific problems of national interest; and develops and maintains the nation's primary physical standards. Other activities include the provision of free technical information to manufacturing concerns; the publication of research journals; and representation of Canada in International Scientific Unions. Patentable inventions developed in the Council's laboratories are made available for manufacture through a subsidiary company, Canadian Patents and Development Limited (see p. 144). The National Research Council consists of a president, three vice-presidents, and 17 members representing Canadian universities, industry and labour. The Council is incorporated under the Research Council Act (RSC 1952, c. 239, as amended), and reports to Parliament through the Minister of Industry in his capacity as Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Northern Canada Power Commission.—The Commission was established by Act of Parliament in 1948 (RSC 1952, c. 196) to provide power to points in the Northwest Territories where a need developed and where power could be supplied on a self-sustaining basis; the Act was amended in 1950 to give the Commission authority to provide similar services in the Yukon Territory. The name of the Commission (formerly the Northwest Territories Power Commission) was changed in 1956. It is composed of a chairman and two members appointed by the Governor in Council and reports to Parliament through the Minister of Indian Affairs and Northern Development.

The Commission operates three hydro-electric plants in the Northwest Territories (two on the Snare River near Yellowknife and one on the Taltson River near Fort Smith) and two hydro plants in the Yukon Territory (one on the Yukon River at Whitehorse and the other on the Mayo River near Mayo). Diesel-electric plants and distribution systems are operated at Fort Smith, Fort Simpson, Fort Resolution and Cambridge Bay, N.W.T., at Dawson, Y.T. and at Field, B.C.; diesel-electric power and central heating plants at Inuvik and Frobisher Bay, N.W.T., and at Moose Factory, Ont.; and water supply and sewerage systems at Inuvik and Moose Factory. The Commission also operates in the Northwest Territories, on behalf of the Department, diesel-electric plants at Fort McPherson and Aklavik, and heating plants and domestic water supply and sewerage systems at Fort McPherson and Fort Simpson.

Northern Transportation Company Limited.—This Company was incorporated in 1947 under the title of Northern Transportation Company (1947) Limited, the date being omitted from the name in 1952. Previously a Company chartered under an Alberta statute, it has been a wholly owned subsidiary of Eldorado Mining and Refining Limited since that Crown company was established and carries out the business of a common carrier in the Mackenzie River watershed and western Arctic. The Company is responsible to Parliament through the Minister of Indian Affairs and Northern Development.

Polymer Corporation Limited.—This Corporation was incorporated in 1942 by Letters Patent and is subject to the Government Companies Operation Act (RSC 1952, c. 133) and the Financial Administration Act (RSC 1952, c. 116). Its head office and main plant are located at Sarnia, Ont., where it produces synthetic rubbers, latices, resins and related products. A subsidiary operation for the production of butyl is located in Belgium, and another subsidiary in France is responsible for production of general purpose and specialty rubbers for the European market. An international marketing subsidiary is located in Switzerland. The Company reports to Parliament through the Minister of Defence Production.

Science Council of Canada.—The Act establishing the Science Council of Canada (SC 1966, c. 19) received assent on May 12, 1966. The Council consists of 25 members each having a specialized interest in science or technology and four associate members chosen from among officers or employees of the Federal Government. Members hold office for not more than three years and associate members hold office during pleasure. All are appointed by the Governor in Council. The duties of the Science Council are to assess in a comprehensive manner Canada's scientific and technological resources, requirements and potentialities and to make recommendations thereon. The Council reports to Parliament through the Prime Minister.

St. Lawrence Seaway Authority.—The St. Lawrence Seaway Authority was established by Act of Parliament in 1951 (RSC 1952, c. 242) and came into force by proclamation on July 1, 1954. The Authority was incorporated for the purposes of constructing, maintaining and operating all such works as may be necessary to provide and maintain, either wholly in Canada or in conjunction with works undertaken by an appropriate authority in the United States, a deep waterway between the Port of Montreal and Lake Erie. The Crown corporation, Seaway International Bridge Corporation Limited, is subsidiary to the St. Lawrence Seaway Authority. The Authority is composed of a president, a vice president and a member, and reports to Parliament through the Minister of Transport.

Unemployment Insurance Commission.—The Commission was established under the provisions of the Unemployment Insurance Act, 1940, now the Unemployment Insurance Act, 1955 (SC 1955, c. 50). It is responsible for the administration of the Unemployment Insurance Act and for such other duties and responsibilities as the Governor in Council, on the recommendations of the Minister of Labour, requires. Its general functions are to provide for the compulsory insurance of employed persons with certain exceptions and, subject to regulations, to provide such persons with weekly payments for limited periods if they become unemployed.

The Commission has three Commissioners, one of whom is the Chief Commissioner, and operates at three levels—a head office in Ottawa, five regional offices, and a number of area and district offices across the country. It reports to Parliament through the Minister of Labour.

Section 4.—Acts Administered by Federal Departments*

List of the Principal Acts of Parliament Administered by Departments of the Government of Canada

NOTE.—Copies of individual Acts of Parliament may be obtained from the Queen's Printer, Ottawa, at prices of from 15 cents and up, according to number of pages. Where duplications of certain Acts appear in the list, parts of these Acts are administered by the Departments given.

PART IV.—FEDERAL AND PROVINCIAL GOVERNMENT EMPLOYMENT

Federal Government Employment

The former Civil Service Commission became the Public Service Commission with the proclamation of the Public Service Employment Act on Mar. 13, 1967. Under this Act the Commission retains its status as an independent body responsible to Parliament for the appointment of qualified persons to or from within the public service and for the operation of staff training and development programs. It may establish boards to consider appeals against selections for appointments made from within the public service, to make recommendations on the delegation of its authority, and to inquire into allegations of political partisanship. The Commission's jurisdiction is extended to include a number of persons not covered by the former Civil Service Act. It is also given the prerogative of making extensive delegation of its authority to deputy heads to perform any of its powers, functions or duties, except those relating to appeals.

Under the amended Financial Administration Act and the Public Service Staff Relations Act, both of which were also proclaimed on Mar. 13, 1967, the Treasury Board is made responsible for the development of regulations, policies and standards governing

all other aspects of personnel management in the public service including classification and pay, conditions of employment, collective bargaining and staff relations, organization and establishments, and manpower development and utilization.

Staffing.—The Commission continues to perform its important role as guardian of the merit principle while ensuring the high quality of people within the service. Every citizen has the opportunity of competing for positions in the service of his country. Ordinarily, any Canadian citizen may apply for headquarters positions at Ottawa but applicants for local positions in the administrative support or operational categories who are residents of the locality in which the vacancy occurs are given preference. Competitive examinations are announced through the press and other news media and through posters displayed on public notice boards of the larger post offices, offices of the Canada Manpower Centres, offices of the Public Service Commission and elsewhere.

The Commission's major task—staffing the public service according to merit—is done on an occupational basis. This is consistent with the revised classification system that divides the service into six broad occupational categories which are further divided into groups of occupationally similar jobs. For each major occupation or group of occupations, there is a program of development, recruitment, selection and placement. The activities are operated on the basis of comprehensive manpower planning including regular appraisals of employees, planned rotation, development and continuous recruitment techniques.

The new legislation provides the flexibility needed for the revised approach to government administration whereby competent managers should be allowed to manage and should be held accountable for their decisions. To facilitate staffing under this concept of management, the Commission may delegate any of its authority, except for appeals, to deputy heads wherever practical, and they in turn may delegate this authority with the approval of the Commission. Plans are under way to establish the proper conditions for delegation and to implement the actual delegation of authority. The Commission must report to Parliament on delegation and changes in this delegation.

Staffing operations for the administrative support and operational categories are decentralized to the regional and local levels. But operations remain centralized primarily for employees in executive positions, for most administrative occupations in a number of departments and for specialized or professional employees, so that they may be employed effectively across the service throughout their careers.

Appointments are made from within the service except where the Commission believes it is in the best interests of the service to do otherwise. Selection is made by competition or other processes of personnel selection designed to establish the relative merit of the candidates.

Competitions may be open to the public and to everyone in the public service or they may be limited to all or to a part of the service; the latter are referred to as closed competitions. Examinations for selection may be written, oral, a demonstration of skill or any combination of these. By these techniques, qualified candidates are placed on eligible lists which are valid for periods determined by the Commission. Appointments may be made from an eligible list for positions of a similar occupational nature and level. Closed competitions for promotion are generally conducted by the departmental staffing officers under work-sharing arrangements with the Commission. The Commission remains in touch with the departments to advise and instruct them in the administration of the Public Service Employment Act and its regulations.

Other processes used for appointments include continuous staffing and appraisals. The former is used when there is a recurring demand within an occupational group or there

is some specialization within a group. Applications are reviewed and candidates are called for interview. The records of those who are not immediately called or appointed are put into a manpower inventory. This inventory is reviewed when a vacancy occurs and a group of those in the inventory who are best qualified for that position are considered for the appointment. Within the service, employees are regularly appraised to determine what training and development may be needed, to plan careers, and to decide promotions or transfers on the basis of performance and qualifications.

Appeals.—Under the Act, public servants who are candidates in a competition open to all or part of the service may appeal the results of that competition to the Commission, except where no candidate is successful. When a promotion is made without competition, those who would have been eligible to apply if a competition had been held may appeal. Public servants may also appeal a recommendation from a deputy head for their demotion or release because of incompetence or incapacity.

Management Consulting.—In recent years there has been an increasing awareness of the extent to which efficient and effective administration depends on the adoption of modern management techniques and devices. To ensure this, the Public Service Commission offers management consulting services to departments and agencies covering data processing, operations and methods, operations research, organization analysis and personnel consulting.

Training and Development.—Consistent with the growing emphasis on managerial development and continuing education, the Commission offers interdepartmental courses in government administration, occupational training and management improvement. The Commission acts as the consultant and adviser to deputy heads on training matters and the training and development facilities of the Commission are available to employees to train them for specific occupations or for promotion within the administrative and managerial ranks.

Language.—The Commission has responsibilities concerning the requirements for bilingualism and biculturalism in the public service. It operates language training schools and carries out research and development to achieve various levels of proficiency needed by public servants. It is developing bilingual skills of senior executives so they may perform their duties effectively in either English or French. The program for this development gives these executives a sufficient appreciation of English and French cultures so they may use this understanding when developing and carrying out policy. The Commission also provides departments and agencies with advice and monitors the way in which language-usage policy is put to use.

Statistics of Federal Government Employment.*—The current monthly survey of Federal Government employment, started in 1952, covers all employees of the Government of Canada; employees in this sense exclude the Governor General and Lieutenant-Governors, Ministers of the Crown and Members of Parliament, judges, persons under contract and members of the Armed Forces, but include Force members of the Royal Canadian Mounted Police. The survey is divided into two main categories: (1) departments and departmental corporations, and (2) agency and proprietary corporations and other agencies. Table 1 combines the two groups; Tables 2 to 5 cover employees in the first category and Table 6 covers employees in the second category.

* Prepared in the Governments Division, Financial Statistics Branch, Dominion Bureau of Statistics.

¹ In addition, approximately 250 agency and proprietary corporation and other agency employees are included with those of other provinces.

*Departments and Departmental Corporations.**—The salaries of employees in this group are paid from the Consolidated Revenue Fund. Definitions of classifications are as follows. "Salaried" employees include all persons paid on the basis of an annual salary rate with the exception of ships' officers who, although paid an annual salary rate, are subject to special treatment under the regulations made pertaining to the Financial Administration Act. The salaried staff are employed in departments and departmental corporations which are subject to regulation by the Treasury Board and for which the positions are outlined in the *Estimates of Canada*, or are established by means of supplementary Treasury Board Minutes. Thus, this category of employees includes persons subject to the provisions of the Civil Service Act* plus salaried persons employed on the staffs of Cabinet Ministers and appointed by statute or by Order in Council, and also the salaried staffs of certain administrative branches of the Government that do not fall under the jurisdiction of the Civil Service Act.

"Prevailing Rate" employees are those who occupy continuing positions that are subject to prevailing rate regulations and are therefore paid on the basis of standard wage rates for similar work in the area in which the individual is employed. Regulations made under authority of the Financial Administration Act govern the third group entitled "Ships' Officers and Crews".

These three groups comprise what may be called the "regular" employees of the government service. "Casuals and Others" are principally persons employed on a non-continuing basis.

* The tables under this heading give figures as at Mar. 31, 1966 or for the year ended Mar. 31, 1966 and the classifications, particularly those in Tables 2 and 3 are in accordance with the legislation and policies in effect at that time. Under the Public Service Employment Act, which replaced the Civil Service Act in February 1967, prevailing rate employees and ships' officers and crews are now subject to the provisions of the Act (see p. 154).

¹ Includes a twelve-month retroactive pay increase to approximately 2,700 employees of the Penitentiary Service. ² Includes retroactive payments covering several different periods ending at Aug. 31, 1965. Approximately 62,000 employees benefited from these payments. ³ Includes retroactive salary increases to some 19,000 professional and technical employees for the period July 1, to Dec. 31, 1965.

Table 4 presents metropolitan area data on staff employed in departments and departmental corporations. The 19 metropolitan areas listed include the 17 metropolitan areas defined for purposes of the 1966 Census of population, plus the cities of Regina and Saskatoon. Included are employees who work within the boundaries of the metropolitan areas; employees residing within those areas but working outside are excluded.

4.—Federal Employees in Metropolitan Areas with Totals for Non-metropolitan Areas, by Sex, as at Sept. 30, 1966, and Payrolls for September 1966

¹ Includes 2,380 persons undistributed.

Table 5 presents statistics for departments and departmental corporations on the basis of a classification by function. The purpose of such classification is to supply a means of studying the operation of government without the complication that results from differences in administrative establishment. This analysis is useful in three ways. First, it permits a detailed study of employment by the Government of Canada according to the main purposes or functions and, since these functions are not subject to the periodic changes that alter the administrative structure of the Government, it is possible to develop a statistical series which, with minor exceptions, is consistent over an extended period of time. Secondly, since differences in administrative establishment are eliminated, it is possible to make meaningful comparisons between Federal Government expenditures on employment and similar expenditures by other levels of government. Thirdly, an analysis of the relationship between expenditures on employment and total expenditures may be made with regard to each function.

This Section previously included a table giving employee and payroll data classified by departmental branches, services and corporations as they were organized at the end of the latest fiscal year. However, because of the extensive changes taking place in the organization of a number of departments during 1965-66, this classification does not appear in the current edition; monthly figures on both the functional and departmental bases are available in DBS publication *Federal Government Employment* (Cat. No. 72-004).

5.—Departments and Departmental Corporations classified by Function, Persons Employed as at Mar. 31, 1966, and Regular Payrolls for the Year Ended Mar. 31, 1966

NOTE.—Excludes agency and proprietary corporations and other agencies, figures for which are given in summary form in Table 6.

¹ Excludes 13,984 employees paid \$34,330,000 from postal revenues

² Excludes "helpers" for Christmas 1965, paid \$4,419,000.

³ Excludes the Governor General and 10 Lieutenant-Governors paid \$231,000; 376 judges paid \$7,244,000; and 26 Ministers of the Crown paid \$364,000.

⁴ Excludes field parties of the Department of Mines and Technical Surveys—prevailing rate employees, paid \$585,000; and ships' officers and crews paid \$513,000.

⁵ To avoid revealing particulars relating to individuals, payments of \$14,804 to prevailing rate employees and of \$11,500 to casual employees are excluded from the function detail but are included here.

⁶ Excludes part-time weather observers paid \$52,000.

Agency and Proprietary Corporations and Other Agencies.—The following organizations owned by the Federal Government as at Mar. 31, 1966 are included under this heading. Employees and earnings are shown by month in Table 6; a provincial distribution of employees and a summary of the total payroll in each of the three groups is given in Table 1, p. 157.

Agency Corporations

Atomic Energy of Canada Limited
Canadian Arsenals Limited
Centennial Commission
Crown Assets Disposal Corporation
Defence Construction (1951) Limited

National Battlefields Commission
National Capital Commission
National Harbours Board
Northern Canada Power Commission

Proprietary Corporations

Air Canada
Canadian Broadcasting Corporation
Canadian National Railways
Canadian Overseas Telecommunication Corporation
Central Mortgage and Housing Corporation
Eldorado Aviation Limited
Eldorado Mining and Refining Limited

Export Credits Insurance Corporation
Farm Credit Corporation
Northern Transportation Company Limited
Polymer Corporation Limited
St. Lawrence Seaway Authority
The Seaway International Bridge Corporation Limited

Other Agencies

Atlantic Development Board
Bank of Canada
Canadian Wheat Board

Industrial Development Bank
Canadian Corporation for the 1967 World Exhibition
Office of the Custodian of Enemy Property

Provincial Government Employment

Table 7 shows gross payrolls (including retroactive pay, salary adjustments and overtime payments) of provincial government employees, exclusive of those for British Columbia, for the month of March 1967. Provincial government payrolls for the whole of the year ended Mar. 31, 1967 amounted to \$1,410,585,000, payrolls for departmental services employees amounted to \$840,264,000 and accounted for 59.6 p.c. of the total, those of institutions of higher education received \$154,133,000 or 10.9 p.c., those of provincial government enterprises \$398,558,000 or 28.2 p.c., and those of workmen's compensation boards \$17,630,000 or 1.3 p.c. of the total.

The only data available for British Columbia and included in the table are for employees of institutions of higher education.

¹ Departmental services of the Northwest Territories are staffed by employees of the Government of Canada who are included in the statistics under "Federal Government Employment".

PART V.—CANADA'S EXTERNAL RELATIONS*

Section 1.—Canada's International Status

The growth of Canada's international status is reflected in the development of the Department of External Affairs. From Confederation until 1914, Canada's position in the British Empire was essentially that of a self-governing colony, whose external relations were directed and controlled by the Imperial Government in Great Britain. Canada's first efforts concerning its own external relations, in the early 1900s, merely took the form of creating improved administrative machinery at home. In 1909, Parliament authorized the establishment of a "Department of External Affairs" placing it under the Secretary of State, with an Under-Secretary of State for External Affairs to rank as the

* Prepared (June 1967) by the Department of External Affairs, Ottawa.

permanent deputy head of the Department. The title of the Department indicated that it was to deal with Canada's relations with other governments within the British Empire as well as with foreign powers but its establishment brought no constitutional change. In 1912, the Department was placed directly under the Prime Minister who held the additional portfolio of Secretary of State for External Affairs and this situation obtained until 1946 when the first separate Secretary of State for External Affairs was appointed.

The Department began with a modest staff consisting of the Under-Secretary and six clerks. In 1912 an Assistant Under-Secretary was added, and in 1913 a Legal Adviser. Before the establishment of the Department, a High Commissioner had been appointed to represent Canada in London (from 1880) and an Agent-General in France (from 1882), and Canada, in the closing years of the nineteenth century, was also represented abroad by trade commissioners and immigration officials. However, none of these officials had diplomatic status. Negotiations with foreign countries were conducted through the British Foreign Office and dealings with other parts of the Empire through the Colonial Office, with Canadian representatives frequently included in negotiations. Canadian interests abroad were handled by British diplomatic and consular authorities and all Canadian communications to other governments were made through the Governor General.

The gradual recognition of Canadian autonomy in international affairs and the growth of Canadian responsibilities abroad made expansion of services and representation inevitable. After 1920, it became increasingly apparent that Canada's interests could no longer be conveniently handled by the British diplomatic and consular authorities and the Department began to develop into an agency for the direct administration of Canada's external affairs. In 1921, the Office of the High Commissioner in London was placed under its direct control. In 1925, a Canadian Advisory Officer was appointed in Geneva to represent Canada at various conferences and League of Nations Assemblies and to keep the Canadian Government informed of the activities of the League and of the International Labour Office. In 1926, a Canadian Minister was appointed to Washington.

An advance of the first importance in the Department's development came as a result of an agreement reached at the Imperial Conference of 1926 by which the Governor General ceased to represent the British Government and became solely the personal representative of the Sovereign. This brought about two changes: as the British Government was now without a representative in Canada, it appointed, in 1928, a High Commissioner to represent it at Ottawa; and after July 1, 1927, correspondence from the Dominions Office in London and from foreign governments was directed to the Secretary of State for External Affairs instead of to the Governor General.

In 1928, the former Agent-General in Paris was appointed Minister to France and, in 1929, a legation was opened in Tokyo. At about the same time, the United States, France and Japan opened legations in Ottawa. The expansion of the service was then interrupted by the depression of the 1930s and the next step in the exchange of diplomatic representatives with other countries was taken when Belgium sent a Minister to Ottawa in 1937 and Canada, in 1939, established legations in Belgium and The Netherlands.

With the outbreak of the Second World War, it became imperative that Canada have closer and more direct contact with other governments of the Commonwealth, with the Allied governments and with certain other foreign governments. The day after Canada's separate declaration of war on Sept. 10, 1939, it was announced that the Canadian Government would send High Commissioners to Australia, New Zealand, South Africa and Ireland, and these governments reciprocated. The appointment in 1941 of a High Commissioner to Newfoundland recognized the importance of that country to the defence of Canada. In 1941, by reciprocal agreement, Canada appointed Ministers to the U.S.S.R. and China. During the War, a single Canadian Minister was accredited to a number of Allied governments then functioning in London or Cairo—those of Belgium, The Netherlands, Czechoslovakia, Greece, Norway, Poland and Yugoslavia, and Canada received Ministers from each of these governments. After the liberation of France, this Minister, following a period in Algiers as representative to the French Committee of National Liberation, moved to Paris with the rank of Ambassador.

Another wartime development was the establishment of diplomatic relations with Latin America. In 1941, Canadian legations were opened in Brazil and the Argentine Republic (the Minister to the latter being also accredited in 1941 to Chile), and these countries sent their first Ministers to Ottawa. Diplomatic representatives were sent to Mexico and Peru in 1944 and to Cuba in 1945. Canada now has diplomatic relations with all countries in Latin America and because of developing ties with that area, a separate political division devoted to Latin America was set up in the Department in 1960.

Canada's external affairs services continued to expand following the War. Embassies were opened in a number of countries and, after 1947, High Commissioners were accredited to India and Pakistan and subsequently to Jamaica, Malaysia, Nigeria, Sierra Leone, Tanzania, Trinidad and Tobago, Uganda, Kenya and Malta.

Membership in the United Nations has increased Canada's responsibilities outside its own borders and Canada has been represented on various organs of the UN since its formation in San Francisco in 1945. A Permanent Canadian Delegation was established in New York in 1948 and a year later a Canadian office was opened in Geneva, the European headquarters of the organization. These offices, now called Permanent Missions, have since been expanded. Canada was one of the founding members of the North Atlantic Treaty Organization in 1949 and has been active in the Organization throughout the years of its existence. In 1952, on the establishment of a NATO Permanent Council, a Canadian Permanent Delegation was set up in Paris (since moved to Brussels) to represent Canada's NATO interest. There is also in Paris a Canadian Permanent Delegation to the Organization for Economic Co-operation and Development. In addition to representing Canada on these permanent international bodies and their various committees, officials of the Department of External Affairs have been members of Canadian delegations at many international conferences in recent years.

Today, Canada conducts its external relations with some 85 countries. Diplomatic representation abroad and representation of other countries in Canada is given in Section 2 following, and Section 3 reports Canada's main international activities during 1966 and early 1967. A brief review of the present functions and organization of the Department of External Affairs is given at p. 130 of this volume; a broader coverage may be found in the monthly bulletin *External Affairs* (Queen's Printer, Ottawa, \$2 per year) and in the Annual Report of the Department.

Section 2.—Diplomatic Representation as at June 30, 1967

NOTE.—Changes in this listing subsequent to June 30, 1967 and names of current representatives are given in *Canadian Representatives Abroad and Representatives of Other Countries in Canada*, published thrice yearly and obtainable from the Queen's Printer, Ottawa, price 60 cents per copy.

1.—Canadian Representation Abroad

Section 3.—International Activities, 1966-67

Subsection 1.—Canada and Commonwealth Relations

The Commonwealth today has been transformed basically from the compact and like-minded family of nations of predominantly European stock which constituted the Commonwealth association from the enactment of the Statute of Westminster to 1947. With its present membership of 26 sovereign states covering about one quarter of the earth's land surface, representing more than 750,000,000 people of many colours, creeds and languages, and including both economically developed and under-developed countries as well as governments committed and uncommitted in the international power groupings, the Commonwealth more accurately reflects the world over which it spreads so widely. The interests of its members extend to all continents and the variety of problems demanding their attention has greatly increased in scarcely more than a decade.

Commonwealth members are enumerated according to the year (if post-1931, noted in brackets) when membership was proclaimed: Britain; Canada; Australia; New Zealand; India (1947); Pakistan (1947); Ceylon (1948); Ghana (1957); Malaya (1957); Nigeria (1960); Cyprus (1961); Sierra Leone (1961); Tanganyika (1961); Jamaica (1962); Trinidad and Tobago (1962); Uganda (1962); Kenya (1963); Malawi (1964); Malta (1964); Zambia (1964); The Gambia (1965); Singapore (1965); Guyana (1966); Botswana (1966); Lesotho (1966); and Barbados (1966). Early in 1964, Tanganyika joined Zanzibar to form the United Republic of Tanzania. When Singapore, Sarawak and Sabah joined the Federation in September 1963, Malaya became Malaysia; Singapore separated from Malaysia in August 1965.

A development of 1966 was the negotiation by six Commonwealth Caribbean territories—Antigua, Dominica, Grenada, St. Kitts-Nevis-Anguilla, St. Lucia and St. Vincent—of a new constitutional status in association with Britain. Under the West Indies Act, 1967, each of the West Indies (Associated States) acquired full control over its internal affairs with the right to amend its constitution, including the right to end the association and declare itself independent. Britain continues to be responsible for the defence and external relations of the Associated States but has delegated executive authority regarding certain aspects of their external relations to the respective governments.

The Commonwealth Secretariat, established by a 1965 decision of Prime Ministers, has its headquarters at Marlborough House, London. Its first Secretary-General is Mr. Arnold Smith, a Canadian. The Secretariat has the responsibility of organizing and servicing official Commonwealth conferences; it facilitates the exchange of information between member countries and generally stands at the service of all Commonwealth governments as a visible symbol of the spirit of co-operation which animates the Commonwealth. The Secretariat of the former Commonwealth Economic Committee and the Commonwealth Education Liaison Unit, both based in London, were integrated with the Secretariat at the end of 1966.

Membership in the Commonwealth is one of the fundamental aspects of Canadian foreign policy. Canada has supported the extension and development of a strong Commonwealth, capable of exerting significant influence for international peace and progress. Commonwealth ties give Canada a special relationship with this group of nations which, despite the diversity of their backgrounds, share important ideals and traditions in common. Commonwealth ties are characterized in the main by a spirit of co-operation developed through consultation and exchange of views. These are continuous not only in Commonwealth capitals but in other countries, and also at United Nations and other international gatherings.

In addition to these continuing exchanges at many levels, special meetings are convened for the purpose of discussing and co-ordinating the interests of Commonwealth members in various special fields, and to review international developments in the Commonwealth context. Two meetings of Heads of Government (Prime Ministers and Presidents) took place in 1966. The first was held in Lagos, Nigeria, in January to discuss Rhodesia and the second was held in London in September when discussions covered a wide range of international affairs. Other Ministerial meetings included the Law Ministers in London in April, the Trade Ministers in the same city in May and the Finance Ministers in Montreal in September. The Commonwealth Foundation, a semi-autonomous body financed by Commonwealth governments, came into being in 1966 with the aim of promoting contacts between professional persons within the Commonwealth. The Commonwealth Parliamentary Association met in Ottawa in September.

Canada's external aid for developing countries continued to be directed, in the main, to Commonwealth countries through the Colombo Plan, the Special Commonwealth Africa Assistance Plan (SCAAP), and the Canadian program for Commonwealth Caribbean assistance. Canada's total contribution under the Colombo Plan since its inception exceeds \$800,000,000. Canada aided Commonwealth countries in Africa through SCAAP to a total of \$56,500,000 for the period from 1960 to the end of March 1967. Approximately \$44,000,000 was made available for aid and technical assistance to Commonwealth Caribbean countries from 1958 to the end of March 1967.

Canada is an active participant in the Commonwealth Scholarship and Fellowship Plan (see also p. 186) and during the 1966-67 academic year received the full quota of 250 students under this Plan, 78 p.c. of them from the developing countries; 70 Canadian students continued their higher education in other Commonwealth countries. Canada is also playing a significant part in the training and provision of teachers for service in Commonwealth countries and assisting in plans for co-operation in technical education. During the academic year 1966-67, there were 665 Canadian teachers and university professors serving under Canadian Government aid programs in the less-developed countries of Southeast Asia, Africa and the Caribbean area, a very substantial proportion of them in Commonwealth countries.

Subsection 2.—Francophonie

Heir to the great traditions of the French language and culture, Canada is also contributing fully to the establishment of special links between francophone countries. Its bilateral relations with France have developed greatly in recent years through political consultations, parliamentary visits, cultural and scientific exchanges, increased trade, officer exchanges, defence production co-operation, and the like. Links with other French-speaking countries have also been strengthened by the establishment of diplomatic missions and developing exchanges in a number of fields. A growing proportion of Canadian economic aid has been directed to francophone countries in Africa (see p. 186). Canada is taking part in current endeavours to develop multilateral co-operation between French-speaking countries, a policy based on the recognition of the value to Canada of its ties with a multi-racial community of some 30 countries with 150,000,000 inhabitants, linked together by French culture.

Subsection 3.—Canada and the United Nations

Firm support for the United Nations is an essential element of Canadian foreign policy. Canada has contributed over the years to the efforts of the organization to keep the peace in various parts of the world, including the Middle East, Kashmir, the Congo, West Irian, and Cyprus. In the 1956 Middle East crisis, Canada played a significant role in the establishment of the United Nations Emergency Force and participated in the Force until its withdrawal in 1967. In 1960, Canada responded to a UN request for support of its operations in the Congo by supplying military and civilian specialists and by pledging political and financial support. In 1962, Canada provided aircraft, pilots and maintenance crews to assist the United Nations Temporary Executive Authority (UNTEA) in the exercise of its peacekeeping functions in West Irian. Canada maintains a large contingent in Cyprus (UNFICYP) to assist the UN to prevent open fighting between the Greek and Turkish communities. Canada has consistently advocated the strengthening of the peacekeeping capacity of the UN by means of advance planning at UN headquarters and advance cost-sharing arrangements and has taken steps to improve the readiness of its own forces and urged that others be invited to do the same. Despite slow progress and occasional setbacks, Canada continues to believe that the UN has an important role to play in the maintenance of international peace and security.

As a member of the eighteen-nation Disarmament Committee, Canada participates directly in the task of negotiating general and complete disarmament under effective international control and seeking agreement on measures to reduce international tension and lessen the possibility of war. In the Canadian view, it is of particular importance at this juncture to limit the spread of nuclear weapons and to extend to underground testing the treaty banning nuclear tests in the atmosphere, in outer space and under water.

Canada also participates directly in the work of the UN through its membership in various UN bodies including all of the 13 specialized agencies and the International Atomic Energy Agency. The International Civil Aviation Organization (ICAO), with headquarters in Montreal, is the only Specialized Agency of the UN with headquarters in Canada. The Fifteenth Session of the ICAO Assembly was held in Montreal in 1965 and the Assembly will meet again in 1968.

In 1967, Canada will complete a three-year term on the Economic and Social Council but will continue as a member of most of the important subsidiary bodies of the Council such as the Economic Commission for Latin America, the Committee for Programme and Co-ordination, the Inter-Governmental Committee of the UN/FAO World Food Programme, the Commission on Social Development, the Statistical Commission, the Commission on Narcotic Drugs and the Committee on Housing, Building and Planning.

Canada also serves on the Governing Council of the United Nations Development Programme (UNDP) and the Industrial Development Board of the newly established United Nations Industrial Development Organization (UNIDO) which replaced the Committee for Industrial Development. Canada participates directly on the Executive Committee of the Office of the United Nations Children's Fund (UNICEF), the Trade and Development Board of the United Nations Conference on Trade and Development (UNCTAD) and the Executive Committee of the Office of the United Nations High Commissioner for Refugees (since the Second World War, Canada has received approximately 300,000 refugees from overseas).

Canada belongs to 16 subsidiary bodies of the General Assembly, including the Committee on the Peaceful Uses of Outer Space, the Disarmament Commission, the Special Committee on Peacekeeping Operations and the United Nations Scientific Committee on the Effects of Atomic Radiation. Canada maintains Permanent Missions at both UN headquarters in New York and at the European Office of the organization in Geneva.

Canada pays 3.17 p.c. of the organization's regular budget and is the sixth largest contributor. In 1966 Canada's share of the gross expenses of \$131,167,000 (Cdn.) was approximately \$3,480,000, and its apportioned share for the costs of the United Nations Emergency Force in the Middle East (UNEF) was about 4 p.c. The cost to Canada of

maintaining its contingent in Cyprus was about \$3,000,000 in 1966. In addition, Canada makes voluntary contributions to special UN programs such as the United Nations Development Programme (UNDP), the United Nations High Commissioner for Refugees (UNHCR), the United Nations Children's Fund (UNICEF), the United Nations Relief and Works Agency in the Middle East (UNRWA) and the World Food Programme (WFP).

Canada's total assessment and contributions to the UN, its Specialized Agencies and related bodies totalled approximately \$240,000,000 during the period 1945-65 and about \$48,000,000 in 1966. In 1966 Canada's quota (assessed share of capital) for the International Bank for Reconstruction and Development (IBRD) and the International Monetary Fund (IMF) was increased about \$250,000,000, of which some \$55,000,000 was paid during 1966. The previous subscription quota of \$800,000,000 had been paid off in 1963.

Canada has been elected to a seat on the Security Council for 1967-68, having previously served in 1947-48 and 1958-59.

Canadian Financial Contributions to the United Nations.—In 1966, Canada's contributions to the United Nations system were as follows:—

<i>Agency</i>	<i>Percentage Assessment or Voluntary Contribution (V)</i>	<i>Contribution (Cdn. \$)</i>
United Nations—		
Regular Budget.....	3.17	3 481,620

United Nations Association in Canada.....	V	17,000

¹ Estimated. This figure represents the cost to Canada of maintaining its contingent in Cyprus in 1966 after reimbursement for certain expenses by the UN; it does not include salaries and similar costs that Canada would have had to pay if the personnel had remained in Canada.

² UNDP was formed by the consolidation of the Expanded Programme of Technical Assistance (EPTA) and the Special Fund, according to the terms of resolution 2029(XX) of Nov. 22, 1965.

³ Includes a special contribution of \$100,000 made on Dec. 9, 1966 in memory of the children who died at Aberfan, Wales, and Dorion, Que.

⁴ Canada also contributed \$6 567 as its share of the costs of the UPU English Translation Service.

⁵ Of this amount, \$4,540 000 was actually paid to the IBRD; the remainder is available if required. The Canadian subscription to the IBRD now totals \$556 215,150.

⁶ There was no increase in the Canadian quota in the IFC in 1966.

⁷ Of this amount, Canada paid \$51,351,348 to the IMF in gold. The remainder is held by the IMF in the form of non-interest-bearing notes payable on demand in Canadian dollars. The increase brings Canada's quota in the IMF to approximately \$500,000,000.

Specialized Agencies.—Canada is a member of each of the 13 Specialized Agencies of the UN. Additionally, Canada holds membership in the International Atomic Energy Agency (IAEA), an autonomous international organization under the aegis of the UN. These Agencies are invested with wide international responsibilities established by inter-governmental agreement, and act in relationship with the UN to assist in carrying out the terms of the Charter. Co-ordination of activities of the Agencies is promoted by the Administrative Committee on Co-ordination established by the Economic and Social Council. This Committee is composed of the Secretary General of the UN, the executive heads of the Specialized Agencies, the Director General of the IAEA and other high officials of the UN. It considers common administrative questions, inter-agency program co-ordination and projects or problems of special urgency to be undertaken jointly by several Agencies. The Agencies also report annually to the Economic and Social Council of the UN.

International Labour Organization.—The International Labour Organization (ILO) was originally established with the League of Nations in 1919 and became a Specialized Agency of the UN in 1946. It brings together representatives of governments, employers and workers from 118 member states in an attempt to promote social budgets by improving living and working conditions in all parts of the world. The ILO is responsible for a number of technical programs financed by the United Nations Development Programme, as well as training programs under its regular budget. To further its work, the ILO holds numerous meetings during the year, including the International Labour Conference in Geneva each June. At the 50th session of the Conference in June 1966 the principal debate focused on the ILO's role in the industrialization of the developing countries.

Food and Agriculture Organization.—The Food and Agriculture Organization (FAO) came into being in 1945, the first Conference being held in that year in Quebec City. It now has 114 members. The objectives of the Organization are to raise the levels of nutrition and living standards of its members and to improve the techniques of the production and distribution of food and agricultural, fishery and forestry products. To this end, the FAO Secretariat collects, analyses and distributes technical and economic information and encourages appropriate national and international action. A Council meets twice a year to give direction and policy guidance to the Secretariat; the FAO Conference, which is the governing body of the Organization, meets every other year. Headquarters are in Rome, Italy.

Canada has participated actively in FAO activities and is a member of the Council, the Committee on Commodity Problems (CCP), the Consultative Sub-Committee on Surplus Disposals, the FAO Group on Grains, the North American Forestry Commission and other FAO bodies. A number of Canadians are on the staff at Rome headquarters and many Canadians have undertaken assignments under FAO technical assistance programs. Canadian membership in the Organization is provided for by an Act of the Canadian Parliament passed in 1945. A committee of officials from Canadian Government departments (the Canadian Interdepartmental FAO Committee) has been established to maintain liaison between the FAO Secretariat and the Canadian Government.

The World Food Programme first began operations on a three-year experimental basis at the beginning of 1963, under the joint auspices of the FAO and the UN. The Programme provides food aid on a multilateral basis for emergency relief and promotes economic and social development, including feeding of children. At a UN-FAO Pledging Conference in New York in January 1966, \$208,000,000 was pledged toward a second three-year program (1966-68). Canada, with a pledge of \$27,500,000, is the second largest supporter of the Programme.

The Freedom from Hunger campaign, started by FAO in 1960 and now extended until at least 1970, focused during 1966 on youth, on education and on self-help in the developing countries. A series of six seminars, enabling rural youth leaders, government officials and representatives of private organizations to study out-of-school rural youth programs will culminate in a world-wide conference called the Young World Food and Development Project to be held in Toronto in September 1967.

World Health Organization.—The World Health Organization (WHO) came into being in 1948 and is one of the largest of the Specialized Agencies of the UN, having a total membership of 127. Functioning through the World Health Assembly (an organization composed of an Executive Board, a Secretariat and six regional committees), WHO acts as a directing and co-ordinating authority on international health matters. In addition, it provides advisory and technical services to help countries develop and improve their health services. The 19th World Health Assembly was held in Geneva in May 1966. (See also the item "International Health" in Subsect. 7, Sect. 1, Part I of Chapter VI on Public Health, Welfare and Social Security.)

United Nations Educational, Scientific and Cultural Organization.—The United Nations Educational, Scientific and Cultural Organization (UNESCO) was established in 1946 "to contribute to peace and security by promoting collaboration among the nations through education, science and culture in order to further universal respect for justice, for the rule of law, for human rights and fundamental freedoms". Its headquarters is in Paris and total membership at the end of 1966 was 124 states.

The Organization is made up of three principal organs—the General Conference which is the policy-making body, the Executive Board and the Secretariat. Representatives from member states make up the General Conference which meets every two years to consider applications for membership, elect the Executive Board, plan the program and approve the budget for the ensuing two-year period. The 14th Session of the General Conference was held in Paris in October and November 1966. It approved a budget of \$61,500,000, giving priority to the educational needs of the developing countries and to science activities, particularly of the application of science to development; the Canadian assessment rate is 2.97. Further information about the Organization may be obtained from the Canadian National Commission for UNESCO, Ottawa.

International Civil Aviation Organization.—The ICAO, with headquarters in Montreal, is the only Specialized Agency of the UN with headquarters in Canada. It was established to study problems of international civil aviation and the establishment of international standards and regulations for civil aviation. ICAO operations are conducted through its Assembly, Council and Secretariat. Canada has been a member of the 27-nation Council, the governing body of ICAO, since its inception in 1947. The Assembly, consisting of all member states, is convened at least once in a three-year period to decide on policy and vote on the budget. The last Session (15th) of the Assembly was held in Montreal in June and July 1965; a Canadian held the Presidency of the Session.

International Telecommunication Union.—Canada is a member of the International Telecommunication Union (ITU), which traces its origin to the International Telegraph Convention of 1865 and the International Radio Telegraph Convention of 1906. The ITU is concerned with the maintenance of international co-operation for the improvement and use of telecommunications of all kinds for the benefit of the general public. It has 129 member countries. The International Telecommunication Convention which was adopted by the Plenipotentiary Conference of the Union at Montreux, Switzerland, in 1965 came into force on Jan. 1, 1967. Canada is represented on the 29-member Administrative Council, the executive organ of the ITU.

World Meteorological Organization.—Canada is a member of the World Meteorological Organization (WMO), a Specialized Agency of the UN since 1951 but developed from the International Meteorological Organization founded in 1878. The membership stands at 112. The Fifth World Meteorological Congress was held in Geneva Apr. 3-28, 1967, and approved a program for the development of an improved world-wide meteorological system which was given the name "World Weather Watch". Canada is a member of the Executive Committee of the Organization.

Inter-Governmental Maritime Consultative Organization.—The Inter-Governmental Maritime Consultative Organization (IMCO) was established in 1959 to promote international co-operation on technical shipping problems and the adoption of the highest standards

of safety and navigation and now has a membership of 65. IMCO exercises bureau functions for International Conventions on Safety of Life at Sea, Prevention of Pollution of the Sea by Oil and Facilitation of International Maritime Traffic. Canada was re-elected to the Administrative Council and the Maritime Safety Committee during their regular sessions held in London in May 1966.

Universal Postal Union.—With a membership of 129, the Universal Postal Union (UPU) is one of the largest of the Specialized Agencies of the UN; it is also one of the oldest, as it was founded in Berne in 1874 with the principal aim of improving postal services throughout the world and promoting international collaboration. The Universal Postal Congress is the supreme authority of the UPU and normally meets every five years to review the Universal Postal Convention and its subsidiary instruments. In the interim, UPU activities are carried on by an executive council of which Canada is at present a member, a consultative committee on postal studies, and an international bureau. The 15th Congress was held in Vienna in May-July 1964 and the 16th Congress will be held in Tokyo in 1969.

International Monetary Fund.—The International Monetary Fund, established by the Bretton Woods Conference in 1944, came into being in 1945. It provides machinery for international consultation and collaboration on monetary, payment and exchange problems, including the promotion of exchange stability, the elimination of exchange restrictions, the establishment of a multilateral system of current payments and the expansion and balanced growth of international trade. Also member countries under certain conditions may draw on the regular resources of the Fund, which now amount to some \$21,000,000,000 (of which the equivalent of about \$3,700,000,000 is in gold) or on the supplementary resources of \$6,000,000,000 made available in 1962 under the General Arrangements to Borrow, which in 1966 were extended until 1970. The Fund now has 105 members. Canada has been represented on the Fund's Executive Board since its inception.

International Bank for Reconstruction and Development.—The IBRD or World Bank was founded at the same time as the International Monetary Fund at the Bretton Woods Conference in 1944 to assist the development of productive resources in member countries by extending loans where private capital is not available on reasonable terms and by providing technical assistance. The loans are made from the paid-up subscriptions of member states, from the surplus accumulated by the Bank and from loans raised in the markets of member states. By Dec. 31, 1965, the subscribed capital was \$21,606,000,000 (U.S.). The Bank's first loans were for European postwar reconstruction but in 1948 the Bank turned to lending for development and an increasing proportion of its funds has been directed to the less-developed areas of the world. As of Dec. 31, 1965, the Bank had made 446 loans totalling nearly \$9,500,000,000 (U.S.) since it started operations in 1946 and had used or been able to allocate for lending the equivalent of approximately \$1,779,000,000 from paid-in capital, including the full \$75,000,000 of the paid-in portion of Canada's subscription. In 1966, IBRD lending totalled \$901,000,000 compared with about \$1,200,000,000 in 1965.

As in 1965, 1966 was marked by an intensive marketing campaign that included public offerings of the Bank's bonds in world markets. These offerings, aggregating the equivalent of \$312,000,000, included public issues of the Bank in the Canadian market for the second time in nearly 10 years. Two public offerings of \$20,000,000 (Cdn.) each were made in Canada in February and November 1966.

International Finance Corporation.—The function of the International Finance Corporation, which is an affiliate of the IBRD, is to promote the growth of productive private enterprise by assisting private capital, by acting as a clearing house in bringing together investment opportunities and private capital and by helping to enlist managerial skill and experience when not otherwise available to a project. Of a total capital subscription of \$99,400,000 (U.S.), Canada has provided \$3,600,000.

International Development Association.—The IDA, also an affiliate of the IBRD, was established in September 1960 to meet the situation of a growing number of less-developed countries whose need for an ability to make use of outside capital is greater than their ability to service conventional loans. Consequently, the terms of IDA development credits are designed to impose far less burden on the balance of payments of borrowing countries than conventional loans. Credits extended to date have each been for a term of 50 years, bearing no interest. At the end of 1965, paid-in and prospective resources of IDA amounted to \$1,676,300,000 (U.S.). Prospective contributions to be paid in over the three years 1965-68 (subject to legislative authorization) will amount to \$740,745,000 (U.S.) of which Canada's share will be \$41,700,000 (U.S.). IDA began operations in November 1960 and extended its first development credit in May 1961. By Dec. 31, 1965, it had extended a total of 79 development credits totalling \$1,192,300,000 to 30 countries in Africa, Asia, the Middle East and the Western Hemisphere. In 1966, IDA approved credits of nearly \$478,000,000, a new peak, compared with \$196,000,000 in 1965.

International Atomic Energy Agency.—Formed in 1957, the International Atomic Energy Agency (IAEA) is an autonomous international organization under the aegis of the UN. The Agency was given a mandate to seek to accelerate and enlarge the contribution of atomic energy to peace, health and prosperity throughout the world in a variety of ways. Because Canada has been designated as one of the five members most advanced in nuclear technology, including the production of source materials, a Canadian representative has served on the IAEA Board of Governors since the inception of the Agency.

As of June 1967, IAEA membership consisted of 98 states. The organization of conferences and symposia of experts, the dissemination of information and the provision of technical assistance are among the methods that the Agency adopts to carry out its functions. With the rapid expansion in the use of nuclear power, much of the Agency's program is devoted to this field as well as to the use to which isotopes may be put in agriculture and medicine. An important aspect of the IAEA activities that is becoming of increasing significance relates to the development and application of safeguard measures to ensure that nuclear materials supplied for peaceful purposes are not diverted to military uses.

International Law Commission.—By Article 13(1) of the Charter of the United Nations, one of the purposes of the UN General Assembly is to encourage the progressive development of international law and its codification. In order to implement and to assist in this function, the International Law Commission was created by a General Assembly resolution dated Nov. 21, 1947. It is composed of 25 members who are elected in their individual capacity. They serve for terms of five years and, in general, represent the main forms of civilization and principal legal systems of the world. On Nov. 28, 1961, Canada's Under-Secretary of State for External Affairs was elected to membership of this Commission. The 25 countries whose nationals form, at present, the International Law Commission are: Afghanistan, Algeria, Argentina, Austria, Brazil, Britain, Canada, China, Ecuador, Finland, France, India, Iraq, Israel, Italy, Japan, Nigeria, Poland, Senegal, Spain, the Union of Soviet Socialist Republics, the United Arab Republic, the United States of America, Uruguay and Yugoslavia.

Subsection 4.—Canada and the North Atlantic Treaty Organization

Two Ministerial meetings were held during 1966 and meetings of the Permanent Representatives to the North Atlantic Council were held continuously throughout the year at NATO Headquarters in Paris.

The annual spring meeting was held in Brussels, June 7 and 8, attended by the Foreign Ministers of the NATO Alliance. The Canadian delegation was led by the Secretary of State for External Affairs. Although the discussions covered a wide range of problems, the attention of Ministers was concentrated on issues directly relating to the French

decision, while remaining within the Alliance, to withdraw from the integrated military structure. Ministers decided, in the interest of assuring continued security, to reach as soon as possible solutions acceptable to all concerned. Ministers further agreed to transfer the military headquarters from France and extended a unanimous invitation to the Benelux countries to provide new sites for SHAPE and AFCENT and to Italy to provide a new site for the NATO Defence College.

In reviewing the international situation, Ministers discussed the relations of their countries with the Soviet Union and the East European countries. They concluded that, although it was imperative for the West to maintain adequate forces for deterrence and defence, the peaceful ending of the division of Europe remained a principal purpose of the Alliance. Attention was given during the discussions to Greek-Turkish relations and Ministers welcomed the announcement by Ministers of Greece and Turkey that they were entering into contact on the Cyprus question and on Greek-Turkish relations.

The annual Ministerial meeting held in Paris on Dec. 15 and 16 was attended by a delegation led by the Secretary of State for External Affairs and the Minister of National Defence. There were two dominant themes of political discussion on which there was general agreement. First, there was the recognized need to improve East-West relations and, secondly, the acceptance of the desirability of studying the future of the Alliance. The Council had before it a study of East-West relations which had already revealed that there was a substantial measure of agreement within NATO on this subject. At the opening of the meeting, the Belgian Foreign Minister submitted a resolution proposing a study of the future tasks of the Alliance in the light of developments since 1949. This proposal recalled the Canadian proposal of 1964, which was not pursued at that time for fear it might precipitate a confrontation with France. In the minds of most delegations, the proposal to study the future tasks of the Alliance was closely related to, and tended to merge with, the Council's interest in improving East-West relations. For this reason, Ministers decided to leave to the study on the future of the Alliance consideration of the possibility of developing new proposals for moving forward in the field of improving East-West relations.

An important decision of the December meeting, which reflected the recognized need to engage members as fully as possible in the nuclear affairs of the Alliance, was the establishment of a Nuclear Defence Affairs Committee and a subordinate Nuclear Planning Group. Membership in the Nuclear Defence Affairs Committee is open to all members of NATO who wish to participate. Agreement was reached on a membership of seven in the Nuclear Planning Group (which includes Canada) who were to serve 18 months. Canada supported this decision, which will broaden participation in the formulation of Alliance nuclear defence policy and may open the way to a non-proliferation agreement.

Canadian Contributions to NATO.—Support for NATO during 1966 continued to be one of the foundations of Canadian foreign policy. As its contribution to the military strength of the Alliance, Canada maintains an army brigade and an air division in Europe and supporting forces in Canada, including two battalions assigned to the Allied Command Europe Mobile Force. It has assigned a substantial naval force to the Supreme Allied Commander Atlantic (SACLANT) for the defence of the Canada-United States region in case of emergency and participates with the United States in the defence of the North American Continent through the North American Air Defence Command (NORAD).

Since 1950, Canada has contributed approximately \$1,860,000,000 in mutual aid to European members of NATO. The aid program, consisting of contributions to NATO infrastructure and military costs, transfers of equipment to member countries and aircrew training in Canada of NATO forces, continued in 1966. This program has decreased in magnitude with the changing conditions and the increasing ability of the European members to meet their individual defence requirements.

Subsection 5.—Canada and the United States

Canada's relations with the United States are of vital importance both to Canadian growth and development and to Canada's position in the international community. History and geography have made the two countries neighbours and the demographic realities and economic patterns of today are cementing the friendship that characterizes the relations between them. Co-operation on bilateral matters and on the international front have marked this unique relationship in the past and experience has demonstrated a willingness on both sides of the common border to maintain and foster the spirit of sympathetic understanding to which the countries have become accustomed in their dealings with each other.

Both countries are active members of the UN and its many specialized agencies and both participate actively in NATO, GATT, OECD and other important international organizations. There are also many bilateral bodies that facilitate Canada-United States co-operation. The Ministerial Committee on Trade and Economic Affairs annually brings together members of the Cabinet in both countries for extensive discussions on a wide range of problems of bilateral and international interest. The Permanent Joint Board on Defence and the International Joint Commission are forums for the discussion of North American defence and problems related to boundary waters, respectively. In addition, many joint committees and agencies deal with specialized subjects. But perhaps the most important factor in reinforcing the traditional friendship of the two countries is the continual intermingling of their peoples as private individuals, which is permitted by the free flow across the shared border.

Subsection 6.—Canada and Latin America

Canada has formal diplomatic relations with all 20 Latin American Republics and maintains 14 resident diplomatic missions in the area. Canada's relations with these countries have increased appreciably during the past few years in every field.

Canada is a member of three Inter-American organizations linked with the Organization of American States—the Pan-American Institute of Geography and History, the Inter-American Statistical Institute and the Inter-American Radio Office. Since 1931, Canada has been a member of the Postal Union of the Americas and Spain, which, although not an OAS organization, is closely related to that body. Canada joined the United Nations Economic Commission for Latin America in 1961.

Canada has also been officially represented at a growing number of meetings and conferences concerned with Latin American and Inter-American affairs. For some years Canadian observer groups have attended the annual ministerial meetings of the Inter-American Economic and Social Council, one of the organs of the OAS. During the past two years, Canada has been represented in an observer capacity at three high-level OAS meetings. In addition to attendance at meetings of some of the bodies mentioned in the preceding paragraph, Canada has recently been represented at the conference of Ministers of Education and Economic Planning of Latin America in Buenos Aires, at a meeting of the Centre for Latin American Monetary Studies in the same capital, at the Seventh Meeting of the Inter-American Development Bank in Mexico, the Inter-American Conference of the Ministers of Labour in Caracas, the Annual Meeting of the Inter-American Tropical Tuna Commission in Guayaquil, Ecuador, and at the Seminar on Tax Administration in Washington. In addition, Canada acted as host for the American Regional Conference of the International Labour Organization, held in Ottawa in September 1966. A Canadian expert represented Canada unofficially at the Inter-American meeting of Copyright Experts in Rio de Janeiro.

In December 1964, the Canadian Government signed an agreement with the Inter-American Development Bank under which Canada agreed to make available \$10,000,000 (Cdn.) in development loan funds for use in financing development projects in Latin America. This initial commitment has been followed in each of the two succeeding years by additional commitments of an equal amount, bringing the total Canadian development

loan funds made available to Latin America to a level of \$30,000,000 (Cdn.). As at Mar. 31, 1967, nine Canadian development loans totalling \$16,856,000 (Cdn.) have now been approved for financing of development projects in Latin America.

Although the volume of Canadian trade with Latin America is still a small part of total Canadian trade, it has more than trebled since the end of the Second World War. Venezuela, Cuba, Mexico and Argentina rank among the top 25 Canadian export markets. The Canadian Government has directly facilitated Canadian exports to Latin America and indirectly assisted Latin American economic development through the provision of long-term credits under the Export Credits Insurance Act; these credits total more than \$138,000,000 (Cdn.).

Subsection 7.—Canada and Europe, the Middle East, Africa and the Far East

Canada and Europe.—Canada's relations with Europe spring from the common cultural heritage that this country shares with Britain and France and also reflect its traditional links with other European countries from which Canada's population derives. These relations have been strengthened by Canada's substantial participation, on European soil, in the two World Wars. Canada's relations with Western Europe have since steadily developed under the impulse of major Canadian political, economic, defence and other interests in the area. Canada maintains close and extensive bilateral relations with Britain and France in particular, as well as with most other Western European countries, and has resident diplomatic missions in almost all of them. Traditionally, Britain and to a lesser extent several Western European countries have been among Canada's major partners in external trade and have been its chief source of immigrants. In the multilateral field, Canada is today, with a number of Western European countries, an active member of NATO and the OECD, and also of wider international associations such as GATT. Through its NATO membership in particular, Canada expresses its interest in the security of Western Europe and in any European settlement that may eventually emerge from the political détente there. As a result of its growing prosperity, stability and dynamism and of its progress toward some form of integration, Western Europe is able to play an increasingly significant role in the Western World and toward the under-developed countries. Accordingly, Western Europe tends to assume greater importance for Canada, not only for reasons of history and sentiment, but for the influence it wields, for the possibility of fruitful co-operation it offers in many fields and for the element of balance it can provide to Canada's external relations.

Largely as a result of large-scale sales of Canadian wheat and flour to the U.S.S.R. and the countries of Eastern Europe, Canada's relations with that area have received a marked impulse toward normalization since 1963. This has also been encouraged by the general relaxation of international tensions in Europe over the same period. As a result, the volume of trade and tourism, as well as of official and semi-official visitors in both directions, has greatly increased and agreements on many outstanding issues involving such matters as Canadian claims against a number of Eastern European countries have been settled or are the subject of negotiation. Contacts between Canada and the U.S.S.R. have been facilitated by improvement of communication through the establishment of direct shipping and airline services and by the extension of diplomatic relations from Canada's existing resident missions in Moscow, Prague, Warsaw and Belgrade to cover Hungary, Romania and Bulgaria through non-resident Ambassadors.

Canada and the Middle East.—Canada has participated actively in UN efforts to promote calm and stability and to alleviate want in the Middle East, which has been a focus of tension and conflict since the end of the Second World War. Canadian officers continue to serve with the United Nations Truce Supervision Organization located along Israel's borders with neighbouring Arab States. Canada was closely associated with the formation of the United Nations Emergency Force, and Canadian troops served with

UNEF in Gaza and Sinai from its inception until its withdrawal in May 1967. Canada also took part in the United Nations Yemen Observation Mission which was terminated in September 1964.

Another form of Canadian co-operation in UN activities in the Middle East is the United Nations Relief and Works Agency for Palestine Refugees (UNRWA); Canada has traditionally been one of the leading contributors to that agency since its inception. Following the conflict of June 1967, the Canadian Government supplemented its contribution by providing substantial amounts in emergency food aid and other forms of assistance to the agency and also contributed generously to the International Red Cross for the provision of emergency supplies to relieve human suffering in the Middle East.

Canada and Africa.—The rapid expansion of Canadian diplomatic relations with African countries in recent years reflects the growing Canadian interest in that area and in the problems of its political and economic development. Canada now has diplomatic missions in 11 African countries and the heads of missions are dually accredited to a number of other countries. Canada has particular links with Commonwealth African countries and with French-speaking African states (see also p. 173). Financial and technical assistance is given to these countries through the Special Commonwealth Africa Assistance Plan, a review of which is given on pp. 185-186. Canadian assistance to French-speaking states in Africa is dealt with on pp. 186-187.

Canada and the Far East.—Canada has had important contacts, both official and private, with the Far East over many years and is becoming more and more aware of its position as a Pacific as well as an Atlantic nation. With the development of modern transportation and communications, the Pacific Ocean has ceased to be a barrier and, as a result, contacts between Canadians and the peoples of the Far East are increasing rapidly in number and variety. Many of these contacts are based on a growing volume of trans-Pacific trade. Japan, in particular, is Canada's third largest trading partner; total bilateral trade amounted to over \$650,000,000 in 1966. Canadian Cabinet Ministers hold annual meetings with their Japanese counterparts to discuss matters of mutual interest.

Although Canada does not maintain diplomatic relations with Communist China, it has continued its policy of developing trade and other contacts with Peking on the premise that it should not be isolated but rather encouraged to become more involved in the activities and responsibilities of the international community. In line with this policy, during the 1966 debate on China in the United Nations General Assembly, Canada proposed that representatives of both the Chinese Nationalist Government and the Government in Peking be seated in the Assembly and that the latter participate in the work of the Security Council as a permanent member.

As a member of the International Commissions in Viet-Nam, Laos and Cambodia, Canada has maintained a close interest in the region formerly known as Indo-China. Canadian policy, both within the Commissions and in a broader international context, has been based on a recognition of the needs of the countries of the region for political and economic stability. The course of events in Viet-Nam in recent years has cut across these objectives. In these circumstances the overriding concern of Canadian policy has been to work toward a solution of the present conflict through negotiation rather than by military means. Canada has spared no efforts to this end.

Canada's relations with other countries of the Far East are becoming of increasing importance. As illustrations, a trade agreement was signed with Korea in December 1966, and the establishment of a resident Canadian Embassy in Thailand was announced in April 1967. In the form of economic and technical aid extended through United Nations agencies and the Colombo Plan, Canada is contributing in many ways to the economic development of the Far East. Canada is also a member of the recently established Asian Development Bank to whose capital fund it has contributed \$25,000,000.

Subsection 8.—Organization for Economic Co-operation and Development

The Organization for Economic Co-operation and Development (OECD) was established in September 1961 as successor to the OEEC, with Canada and the United States joining the countries of Western Europe as full members of the new body. Japan, previously a member of the Development Assistance Committee, became, in May 1964, a full member of the OECD and the first member from outside Western Europe or North America. Its headquarters are in Paris.

The prime purpose of the OECD is to promote among member governments co-operation in the fields of economic policy, trade and assistance to developing countries, although it also provides a valuable forum for discussion of common problems in agriculture, industry, finance, technology and manpower policy. At the first Ministerial Council in 1961, member countries approved a growth target of 50 p.c. for the decade to 1970; at the half-way mark in 1966, this goal had been considerably exceeded. Because of its development from the former OEEC, the Organization was at first concerned largely with questions of primarily European interest but, as its membership expanded, it has become increasingly a recognized forum for broader consultation among advanced industrial countries, particularly on questions of economic and financial policy and on the problems of the developing countries. In this latter regard, the OECD now constitutes the main forum for consultations among developed countries concerning the work of the United Nations Conference on Trade and Development (UNCTAD) Trade and Development Board and its committees.

The OECD brings together government officials as well as representatives of private business, labour unions, universities and other non-governmental bodies in both deliberative and consultative capacities, and provides for international liaison among such groups. Within Canada, liaison has been established with the business community through the Canadian Business and Industry Advisory Committee, which was established in 1962 and comprises representatives of the Canadian Chamber of Commerce, the Canadian Council of the International Chamber of Commerce and the Canadian Manufacturers' Association. Parallel arrangements exist for consultation with Canadian labour organizations.

Subsection 9.—Canadian External Aid Programs

The Colombo Plan.—The Colombo Plan for Co-operative Economic Development in South and Southeast Asia was conceived at the Commonwealth Meeting of Foreign Ministers held at Colombo, Ceylon, in January 1950. Although the Plan was initiated by Commonwealth governments, it is not exclusively a Commonwealth Program. It is designed to assist in the economic development and the raising of living standards of all countries and territories in the general area of South and Southeast Asia. Its membership includes Cambodia, Canada, Ceylon, India, Indonesia, Iran, Japan, Korea, Laos, Malaysia, Maldives Islands, Nepal, New Zealand, Pakistan, the Philippines, Singapore, Thailand, Viet-Nam and the United States; the latter is also engaged in a substantial program of economic aid in the same region. Iran and Singapore were admitted to membership in 1966.

The Colombo Plan is supervised by a Consultative Committee composed of Ministers of the member countries, who meet once a year to review projects and exchange views on policy matters. As a consultative body, it makes no collective policy decisions binding member countries; a Council for Technical Co-operation, on which Canada is represented, meets regularly in Ceylon to develop the technical co-operation program of the Plan. Consultative Committee meetings were held in Karachi in 1952, New Delhi in 1953, Ottawa in 1954, Singapore in 1955, Wellington in 1956, Saigon in 1957, Seattle in 1958, Jogjakarta in 1959, Tokyo in 1960, Kuala Lumpur in 1961, Melbourne in 1962, Bangkok in 1963, London in 1964 and Karachi in 1966. At the Jogjakarta meeting it was agreed to extend the Colombo Plan for another five years from June 1961, and it was similarly extended for a further five years at the London meeting in 1964. Reports of the Committee on progress and future plans are published after each annual meeting; each report also contains sections describing the activities of member countries.

From the inception of the Plan in 1950 through March 1967, Canada made available a total of \$800,000,000 in aid for capital and technical assistance projects in South and Southeast Asia. Although nine countries are now receiving capital assistance from Canada, the largest contributions have so far been made to Ceylon, India, Malaysia and Pakistan. The Canadian contribution consists primarily of direct assistance to various development projects, including equipment for multi-purpose irrigation and hydro-electric projects, power-generating plants, construction and fisheries projects and resources surveys, hospital equipment and cobalt therapy units, as well as educational and laboratory equipment and books. It has also included gifts of raw materials, commodities and foodstuffs, such as industrial metals, asbestos, fertilizer, wheat, wheat flour and butter, from the internal sale of which recipient governments have been able to raise funds to meet local costs of economic development projects.

Under the Technical Assistance Program, up to December 1966, more than 8,000 persons from all countries in the area had come to Canada for training in a variety of fields, the major ones being public administration and finance, agriculture, co-operatives, engineering, mining and geology, statistics, health education and social welfare. More than 600 Canadian experts had been sent abroad for service in Colombo Plan countries in such fields as fisheries, agriculture, engineering, mining and prospecting, co-operatives, public administration, education and vocational training, and public health. Other Canadians were employed on aerial resources-survey teams and on the installation and operation of capital equipment.

Commonwealth Caribbean Program.—In 1958, when the Federation of the West Indies was being formed, Canada undertook a five-year \$10,000,000 program of economic and technical assistance. Following the dissolution of the Federation in 1962, it was decided to continue providing assistance to its component territories—Jamaica, Trinidad and Tobago, Barbados, British Guiana (Guyana), British Honduras and the Leeward and Windward Islands—and, since then, \$44,800,000 in loans and grants have been made available to the area, including \$13,500,000 under the 1966-67 program.

Under this program, the area and its territories have been provided with two passenger-cargo ships for inter-island transportation, a deep-water wharf at St. Vincent, a residence for the University of the West Indies in Trinidad, port-handling equipment for five harbours and, for several of the smaller islands, schools, warehouses and freshwater supply facilities. Projects under way include an aerial survey of Trinidad, a scheme for the expansion and improvement of Trinidad's dairy herds, the provision of rural schools, teacherages and a sewerage system in Jamaica, a prefabricated fish-packing plant in Guyana, and a bridge in British Honduras.

A substantial amount of technical assistance has also been given. During the year ended Mar. 31, 1967, training programs were arranged in Canada for over 500 students from the Commonwealth Caribbean, the fields of study including agriculture, engineering, fisheries, forestry, medicine and public administration. In addition, 138 Canadians served in the Commonwealth Caribbean, including teachers, soil surveyors, and advisers in the fields of statistics, legal drafting, housing, films, radio broadcasting, postal services, Indian affairs, technical education and harbour management.

Special Commonwealth Africa Assistance Plan.—In the autumn of 1960 the Canadian Government undertook, subject to Parliamentary approval, to contribute \$10,500,000 to a Special Commonwealth Africa Assistance Plan (SCAAP) over a three-year period beginning Apr. 1, 1961. This program arose from discussions at the Meeting of Commonwealth Prime Ministers in 1960. Although entirely a Commonwealth scheme, SCAAP is essentially the counterpart in Africa of the Colombo Plan in Asia. The main donor countries are Britain, Canada, Australia and New Zealand. Some of the newer Commonwealth members, particularly India and Pakistan, have been able to provide

limited amounts of technical assistance in fields in which they have experience and specialized knowledge. All Commonwealth countries and dependent territories in Africa qualify for development assistance under the SCAAP program.

As occurred in other areas of Canada's expanding aid program, the level of grant aid to SCAAP increased in 1966-67 to \$12,500,000 from \$9,500,000 in the previous fiscal year and development loans assistance to \$6,000,000 from \$5,000,000. In 1965, the first Canadian development loan in Africa was extended to Nigeria in the amount of \$3,500,000 and, early in 1966, two loans totalling \$2,450,000 were granted to Tanzania. A \$2,000,000 food-aid grant in the form of wheat flour was made to Ghana.

Technical assistance programs continued to receive major emphasis. During 1966-67, over 400 Canadian teachers, professors and technical experts were on assignment in Africa while 645 African students received academic and technical training in Canada. This represented a sharp increase in the program of technical assistance from the previous year.

Canadian capital assistance has concentrated on projects assigned a high priority by the recipient country and in which Canada has a high degree of expertise. These included aerial mapping and survey work, forest inventories, pulp and paper survey and forest products development, irrigation and land reclamation, medical training and wheat research, geological surveys and mineral exploration, and the provision of equipment for schools and national parks. A major joint Canadian-Ghanaian effort was the building, equipping and staffing of the Trades Training Centre at Accra at an estimated Canadian cost of \$1,155,000.

The Commonwealth Scholarship and Fellowship Plan.—The proposal to establish a Commonwealth Scholarship and Fellowship Plan was made at the Trade and Economic Conference held at Montreal in September 1958. The Conference envisaged a scheme of 1,000 university scholarships, of which Britain undertook to provide one half and Canada one quarter. The details of the proposed scheme were worked out at the Commonwealth Education Conference at Oxford in 1959. This Plan was designed to enrich the intellectual life of each country of the Commonwealth by enabling an increased number of its brighter students to share in the wide range of educational resources available throughout the Commonwealth and thus promote the equality of educational opportunity at the highest level. During the academic year 1966-67, there were 250 Commonwealth scholars in Canada; since the Plan first became operational during 1960-61, a total of 667 scholars have come to Canada for advanced study.

In 1965, Research and Visiting Fellowships were introduced as part of the Canadian contribution to this Plan. In 1966-67, three Research Fellowships were awarded for a full academic year and six Visiting Fellowships for shorter periods. These Fellowships enable senior educationists from other Commonwealth countries to visit Canadian universities and other educational institutions to carry out investigations, study or research in their particular fields.

Assistance to French-Speaking States in Africa.—In April 1961 the Canadian Government announced an offer of assistance in the educational field to the French-speaking states in Africa and subsequently appropriated \$300,000 for this purpose for each of the years ended Mar. 31, 1962, 1963 and 1965. It was decided at the commencement of this program that emphasis should be placed on the provision of Canadian teachers for Africa. For the year ended Mar. 31, 1967, aid was increased and an allocation of \$8,100,000 was provided to allow for development of a capital assistance program as well as expansion of technical assistance. During that year, 217 teachers and university professors served in French-speaking Africa and 160 students received training in Canada. Preliminary surveys for bridge construction and hydro-electric development were carried out; an agriculture education survey of six countries was begun; arrangements were made to supply

**A Practical
Demonstration
of International
Friendship**

Canadian, Ghanaian and school flags fly outside the Accra Technical Training Centre. The Government of Saskatchewan and the Canadian Government joined with Ghana to bring this school into operation. From it will emerge hundreds of young, eager Ghanaians trained in the essential skills and sciences of the modern world who will soon have a large part in ensuring the future welfare of their nation. All the instructors are from Saskatchewan but it is intended that they be replaced gradually by Ghanaians.

heavy equipment to assist the Republic of Guinea in its roads improvement program; a series of educational films was offered to Cameroon, Central African Republic, Chad, Congo, Dahomey, Morocco, Niger, Togo and Upper Volta; and a contribution of \$500,000 was made to the UN Congo (Kinshasa) Civilian Fund.

In the 1966-67 fiscal year the allocation totalled \$8,100,000—\$6,100,000 in grant funds and \$2,000,000 in development loans. Technical and capital assistance was given to the University of Rwanda; paper for the production of educational literature was supplied to Cameroon, Congo (Leopoldville) and Guinea; film vans and films were made available to Guinea and Gabon; arrangements were made to participate in a livestock improvement program in Cameroon, and food aid, in the form of wheat flour and milk powder, was given to Algeria, Morocco and Senegal to relieve shortages caused by serious droughts.

Latin American Program.—A bilateral Canadian aid program for Latin America was initiated in December 1964, when the Canadian Government concluded an agreement with the Inter-American Development Bank (IADB) by which Canada allocated \$10,000,000 in 'soft' development loan funds for use in high-priority economic, technical and educational projects in Latin America. This initial allocation was augmented in September 1965 with the provision of an additional \$10,000,000 in development loan funds for the area. In 1966-67 this amount was increased to bring the fund total up to \$30,000,000.

Under terms of the agreement, the IADB selects and processes proposed loan projects before submitting those considered suitable to the Canadian Government for its approval. By Mar. 31, 1967, nine Canadian development loans totalling \$16,856,000 had been made available. They included the Port Authority of Acajutla, one of the main Pacific seacoast ports of the Central American Republic of El Salvador, which was granted an interest-free development loan of \$3,240,000 for the expansion and improvement of port facilities, and Canadian development loan funds of up to \$1,260,000 were made available to the Republic of Ecuador to finance a resources survey of 13,000 sq. miles of agricultural and forest land in that country's Guayas River Valley.

Co-operation with the United Nations and its Specialized Agencies, and with other International Aid Programs.—In addition to the annual contributions made to the United Nations Development Program, which encompasses all United Nations programs of technical assistance, Canada arranges training programs in this country for individuals studying under the auspices of the different specialized agencies. This service is also extended to the technical assistance program of the International Co-operation Administration of the United States as well as to other international aid organizations. Up to Mar. 31, 1967, 2,151 individuals had come to Canada through the various agencies from more than 100 countries in all parts of the world. Assistance is also given by recruiting Canadians for service with the specialized agencies on specific technical assistance assignments in under-developed countries.

External Aid Office.—As at Nov. 9, 1960, the operation and administration of Canada's external assistance programs became the responsibility of the External Aid Office, established by Order in Council, placing it in charge of a Director General.

As mentioned under the separate programs above, additional funds were made available for grant assistance in 1966-67. Canada also introduced a development loan program for which \$50,000,000 was authorized in 1965 by Parliament on a non-lapsing basis. The present fiscal period being reported upon is the third consecutive year in which this amount of money has been appropriated for development loan purposes. The terms of the loans are comparable with those of the International Development Association—up to 50 years maturity, non-interest-bearing, and a ten-year grace period. In 1965, the service charge previously in effect (0.75 p.c.) was dropped.

In 1965, Parliament approved the establishment of a separate food aid program under which the External Aid Office is able to purchase food products to meet part of the Canadian contributions to the FAO World Food Program and to meet the needs of countries requesting this form of Canadian assistance.

In 1967, Canada's contribution to the world's food needs increased to \$100,500,000, from \$35,000,000 allocated the year before. It included a special allocation of \$21,500,000 over the amount originally budgeted, in response to an appeal to the Canadian Government in November 1966 by the Prime Minister of India, for urgently required Canadian wheat. Altogether, the significant increase in Canada's food aid program was considered necessary because of continuing distress in India, Pakistan, Algeria, Morocco and Senegal due to crop failures, as well as continuing Canadian commitments to UN specialized agencies.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. xvi of this volume.

Section 1.—Census of Population

This Section presents in brief form the results of the limited census of population taken on June 1, 1966, with certain comparable data from earlier censuses. The 1966 Census did not include questions on ethnic origin, birthplace, religious denomination, language or mother tongue so that the 1961 data in Subsections 7 to 9 will remain the latest available until the taking of the comprehensive decennial census in 1971. Also, 1966 Census figures on households and families intended to be included in Subsection 10 were not available when this Chapter was prepared and will, if possible, appear in an Appendix to this volume.

Detailed census data are published in a series of reports which are obtainable from the Queen's Printer or the Dominion Bureau of Statistics. A list of these publications is available on request from the Information Division of the Dominion Bureau of Statistics.

Subsection 1.—Growth and Movement of Population*

Canada's population stood at 20,015,000 in 1966 as against 10,377,000 in 1931 and 5,371,000 in 1901. In the first decade of the century, when the West was being opened up for settlement, the gain of 34 p.c. was greater than in any other censal period. During that decade, about 1,760,000 immigrants entered the country and natural increase amounted to an estimated 1,000,000. However, since the total increase in population was 1,835,328, it is evident that a substantial number of people left the country during the period. In

* An outline of the growth of population in Canada since the beginning of the seventeenth century may be found in Vol. I of the 1931 Census. Other accounts of population growth prior to the present century are included in Vol. I of the 1941 Census and Vol. X of the 1951 Census.

the 1911-21 decade, population growth dropped to 22 p.c. Military losses in the First World War and losses during the influenza epidemic, which together amounted to about 120,000, were factors in this decline. Although the flow of immigrants was reduced during the war years, it had been very heavy immediately preceding the War, so that the total number for the period (1,612,000) was very close to that for the previous censal period. At the same time, emigration was again extremely high and the increase in population amounted to 1,581,306, being an average of 2 p.c. a year compared with 3 p.c. in the 1901-11 period.

In the decade 1921-31, the rate of increase dropped to 18 p.c. Immigration fell to 1,200,000 and emigration was estimated at 1,000,000. Thus the increase in population, which amounted to 1,588,837, was only 229,000 greater than the natural increase. A feature of this period was the rapid growth of population in Western Canada, partly the result of immigration and partly the result of an influx of people from Eastern Canada. During 1931-41, the population increase was just under 11 p.c. During the depressed conditions of the 1930s, marriage and birth rates were significantly lower and only 150,000 immigrants came to Canada, although, in addition, 75,000 Canadians returned from the United States. Emigration was also much lower than in the previous decades, amounting to an estimated 250,000. Natural increase was only 1,220,000, the crude birth rate falling from 27 per thousand of the population in the 1921-25 period to 24 per thousand in the succeeding five-year period and to 20 per thousand during much of the 1931-41 decade. During 1941-51, population growth was restored to pre-depression levels. Excluding Newfoundland which became part of Canada in 1949, it amounted to 19 p.c.; including Newfoundland it was 22 p.c. Much of the increase took place in the second half of the decade, reflecting heavy postwar immigration and sharp increases in the marriage and birth rates.

In the 1951-61 period, the population growth rate at 30 p.c. came close to approaching the extremely high rate of the first decade of the century. However, the two periods contrast in many ways. In the early period there was a wider dispersal of population increases as whole regions across the Continent were opened up; in the recent period there was a concentration of growth in urban communities although some spreading of population into newly developed northern areas took place. Natural increase accounted for about 75 p.c. of the growth. Although there was some decline in the death rate, the trend of natural increase reflected very closely that of the crude birth rate which began to rise during the War and remained high throughout the period. Net immigration accounted for the remainder of the increase; during the decade, 1,542,853 immigrants entered the country, more than double the estimated emigration. All provinces gained in population during 1951-61 but their rates of increase varied widely. The greatest increases resulted from a combination of natural increase and net migration which in the two large provinces of Central Canada and the two most westerly provinces accounted for over 87 p.c. of the total actual increase. In contrast, increases in the other six provinces were entirely accounted for by natural increase.

In the 1961-66 period, the growth rate dropped to 9.7 p.c., reflecting lower birth rates and immigration in this interval relative to the high levels of these components in the 1950s. Natural increase accounted for 1,520,000 or 85 p.c. of the 1,800,000 five-year gain—a drop from the 1,675,000 attributable to this factor in the 1956-61 period. Also, the 1961-66 net immigration gain of approximately 250,000 was only half of that recorded in the previous five-year period. Most of the 1961-66 population increase occurred in the larger urban agglomerations of Central Canada with the Provinces of Quebec and Ontario together accounting for 70 p.c. of the 1,800,000 national numerical gain. British Columbia and Alberta were responsible for 21 p.c. between them, the residual 9 p.c. occurring in the remaining six provinces and territories.

1.—Numerical Distribution of Population by Province, and Percentage Change from Preceding Census, Census Years 1921-66

NOTE.—Populations for the decennial census years 1871 to 1911 are given in the 1956 Year Book, p. 149. The populations of the Prairie Provinces in 1906, 1916, 1926, 1936 and 1946 will be found in the 1951 edition, p. 131.

Table 3 shows the natural increase and the total population increase for Canada and the provinces in the periods 1941-51, 1951-61 and 1961-66. The balance between the total increase in population and the natural increase during a period represents the

difference between inward and outward movements, i.e., net migration. The net migration data shown for the provinces indicate the net movement of population arising partly from interchange of population between provinces and partly from persons entering and leaving the country.

3.—Numerical Changes in the Population of the Provinces through Natural Increase and Migration 1941-51, 1951-61 and 1961-66

¹ Includes the Yukon and Northwest Territories.

The earlier movement of population in Canada from east to west has not been apparent since the 1920s. Although British Columbia has continued to show population gains from migration since 1931, much of the gain has been at the expense of the Prairie Provinces. The three Prairie Provinces lost by migration about 267,000 persons between 1941 and 1951, gained slightly at the rate of 4,400 annually in the 1951-61 period but then lost an average of 15,500 annually in the period 1961-66. Manitoba lost almost 61,000 people between 1941 and 1951, only 4,500 in the next ten-year period, but nearly 29,000 in the five-year period 1961-66. Saskatchewan has been a consistent loser since 1941, losing on the average almost 20,000 a year during the 1940s, nearly 8,000 a year during the 1950s and 9,000 a year during the 1961-66 period. Alberta lost only about 7,000 in the decade 1941-51, gained close to 13,000 a year during the 1950s, but lost slightly during the 1961-66 period at the rate of about 670 a year. British Columbia gained through migration at the rate of about 23,000 a year during the 1940s, 24,000 a year during the 1950s, and about 28,000 a year during the first half of the 1960s. Although Ontario's gain through migration in the past quarter-century has been twice that of British Columbia on an absolute basis, in relation to its larger population the gain was only about half as important. Most of Ontario's growth through migration was from immigration rather than interprovincial movement of population. Quebec had a slight loss in 1941-51, a substantial gain during the 1950s and a continued, although lesser, gain in the 1961-66 period, due also to immigration. The Maritimes as a whole lost almost 255,000 persons over the quarter-century.

Subsection 2.—Density of Population

Table 4 shows the density of population in the different provinces and territories of Canada in the census years 1951, 1956, 1961 and 1966. Omitting the Yukon and Northwest Territories where population density is exceedingly low, there were 9.50 persons per square mile in Canada as a whole in 1966 compared with 8.66 in 1961 and 6.65 in 1951. The greatest increase in the latest five years was shown by Ontario where there were 2.11 more persons per square mile, followed by Prince Edward Island where there was an increase of 1.79. However, it should be remembered that the population within the provinces is very unevenly distributed; all provinces with the exception of the Maritimes

have large areas almost devoid of population and concentration in other areas is very high. The density of each county and census division in 1966 is given in DBS Census Report 1.1 (Catalogue No. 92-601), and Table 5 gives density in the city proper and in the fringe area of each of the five largest metropolitan areas in 1966 compared with 1961 and 1956.

4.—Land Area and Density of Population, by Province, Census Years 1951, 1956, 1961 and 1966

Subsection 3.—Urban and Rural Population

For the 1961 and 1966 Censuses, all cities, towns and villages of 1,000 or more population, whether incorporated or not, were classed as urban; also classed as urban were the urbanized fringes of census metropolitan and other large urban areas, and the urbanized fringes of certain smaller cities where the city and fringe totalled 10,000 or more persons. The remainder of the population was classed as rural with a further subdivision according to farm and non-farm residence. A farm for census purposes is defined as an agricultural holding of one or more acres with sales of agricultural products of \$50 or more in the previous year. All persons living on such holdings in rural areas are classed as "rural farm" regardless of their occupation. Thus, the population living on "farms" would include some persons not connected with farming operations but who derive their income from non-agricultural pursuits. Conversely, it would exclude farm operators and their families who do not live on their holdings (e.g., in a neighbouring town or village).

Table 6 classifies the 1961 and 1966 rural populations according to non-farm and farm residence and the urban populations by size groups; in the latter classification, each municipality (or part) in an urbanized area is allocated to the same size group as the total urbanized area of which it forms a part. The figures show that, in 1966, almost 74 p.c. of Canada's population were urban dwellers and 54 p.c. lived in or on the fringes of urban centres having a population of 30,000 or more. Only about 10 p.c. lived on farms.

Subsection 4.—Populations of Incorporated Cities, Towns and Villages and of Metropolitan Areas

The population of all incorporated cities, towns and villages is classified by size group in Table 7 for the census years 1951, 1956, 1961 and 1966. During the 1961-66 period, the number of such centres increased by 57 and the proportion of the total population living in them rose from 60.7 p.c. to 63.1 p.c.

The trend toward an increased concentration of the population in the larger urban centres continued in the 1961-66 period. In the five-year interval, the number of incorporated cities and towns of 50,000 or over rose from 29 to 40 and the proportion of the total population in these larger centres increased from 29.0 p.c. to 32.9 p.c. In contrast, although urban centres of 1,000 to 50,000 in size also increased in number from 893 to 921, the proportion of the population residing in these centres fell from 29.3 p.c. in 1961 to 27.9 p.c. in 1966. Similarly, the number of incorporated towns and villages under 1,000 rose from 1,039 to 1,057 in the 1961-66 period but their proportion of the population fell slightly from 2.4 p.c. to 2.2 p.c.

The Canadian cities and towns having a population of over 50,000 in 1966 are listed in Table 8. Included also are the years of their incorporation as cities or towns and comparative population figures for 1951, 1956, 1961 and 1966 which are given according to the boundaries in those respective years.

8.—Incorporated Cities and Towns with Populations of Over 50,000 at the 1966 Census, with Comparable Population Figures for 1951, 1956, 1961 and 1966

NOTE.—The asterisk (*) indicates a boundary change since the preceding census. Population totals are based on areas as incorporated at each of these dates.

¹ All the municipalities on Île-Jésus were amalgamated to form the city of Ville de Laval in 1965.

Census metropolitan areas have been established for groups of urban communities that are in close economic, geographic and social relationship. Table 9 shows the 1966 population of each area with the corresponding 1956 and 1961 figures for the same area as in 1966. As indicated by the last column, most of these metropolitan areas have shown remarkable increases in population since 1961. In 1966 they accounted for 48.1 p.c. of the total population as compared with 45.9 p.c. in 1961 and 43.3 p.c. in 1956.

9.—Populations of Census Metropolitan Areas, Census Years 1956, 1961 and 1966

¹ Area as of 1966.

The 1961 incorporated urban centres in Canada having a population of 1,000 or more at the time of the 1966 Census are listed alphabetically by province in Table 10 and their populations given for the two census years 1961 and 1966. Each population figure is for the boundary in effect at the time of the respective census.

10.—Incorporated Cities, Towns and Villages having Populations of 1,000 or Over, by Province, Census Years 1961 and 1966

NOTE.—Population tables are based on areas as incorporated at each of these dates; a change in municipal boundary since the preceding census is indicated by an asterisk (*). Urban centres are designated in this table by the following abbreviations: c.=city, t.=town and v.=village.

Subsection 5.—Sex and Age Distribution

The sex and age distributions of a population are basic to most, if not all, other analyses, as they influence employment, marriage, birth and death rates and a multitude of other factors that are of great importance in the national life.

Sex.—The Canadian population has always been characterized by an excess of males, although this excess has been greatly modified in recent years. Since Confederation, the peak sex ratio for Canada as a whole was 113 reached in 1911, a census year that fell within

a period of heavy immigration; the 1966 ratio was 101. In the older settled provinces east of Manitoba the ratio varied between 104 in 1911 and 100 in 1966, but in the western provinces which were being opened to settlement in the early years of the century the ratio changed from a high of 146 in 1911 to 103 in 1966.

The sex distributions and variations in ratio among the provinces are given for the census years 1951, 1956, 1961 and 1966 in Table 11.

Age.—The age composition of the Canadian population is, of course, a reflection of past trends in vital rates and immigration. The lower birth rate of the 1961-66 period relative to that of the late 1950s had a considerable impact on the population under 15 years of age in 1966. This age group increased by only 400,000 or 6.5 p.c. between 1961 and 1966 as compared with a gain of 967,000 or 18.5 p.c. in the 1956-61 period. As a result, the proportion that this age group formed of the total population fell from 34.0 p.c. in 1961 to 32.9 p.c. in 1966. The population of working age—those 15-64—increased more substantially, with a gain in excess of 1,200,000 or 11.5 p.c. in the 1961-66 period. Consequently, this age group constituted 59.4 p.c. of the total population in 1966 as compared with 58.4 p.c. five years earlier. Close to one third of the over-all 1961-66 increase in the 15-64 age group occurred among those 15-19 years of age. This young adult age group in 1966 was, of course, comprised of those born in the high birth rate, postwar years. The proportion of persons 65 years of age or over was approximately the same in 1966 as in 1961.

Table 12 shows the population of Canada classified by five-year age groups and by sex for the census years 1951, 1956, 1961 and 1966. The provincial distribution by specified age group is given for 1966 in Table 13.

Subsection 6.—Marital Status

After sex and age, marital status analysis is probably next in importance from a vital, economic and social viewpoint. The number of married females between 15 and 45 years of age is a most significant factor in the fertility of a population. If the proportion of females in this group is low, the expected birth rate will be low. In 1966, 61.2 p.c. of all married females were in the 15-44 age group compared with 62.9 p.c. in 1961, 64.0 p.c. in 1951, 61.2 p.c. in 1941 and 63.5 p.c. in 1931.

In the 1961-66 period, the total population 15 years of age or over increased by 11.4 p.c. while the single adult population rose by 18.0 p.c., the married by 8.7 p.c. and the widowed and divorced combined by 12.5 p.c. Thus, the proportion of the adult population who were single increased from 26.5 p.c. in 1961 to 28.0 p.c. in 1966 and the married proportion fell from 66.6 p.c. to 65.0 p.c. in the five-year interval. It is of interest that the 1961-66 decline in the proportion married is largely attributable to smaller proportions in this category in the younger adult age groups. The proportion of those 25 years of age or over who were married was approximately the same at the two census years, i.e., 79 p.c., but the married proportion for the 15-24 age group fell from 23.0 p.c. in 1961 to 21.4 p.c. in 1966.

The marital status of the population in 1966 is shown in Table 14.

Subsection 7.—Ethnic Groups and Birthplaces

Ethnic Groups.—A population made up of diverse ethnic groups gives rise to political, social and economic problems quite different in nature from those of one with a more homogeneous ethnic composition. These problems are mitigated, however, to the extent that certain groups are more easily integrated than others. It is equally true that the different backgrounds of various ethnic groups lend variety and diversity to the national life.

The two basic groups in the Canadian population are the French and British Isles ethnic groups. The influence of the French in Canada covers a longer period and, with the exception of the 1921 Census, this group has always exceeded in number any of the components of the British Isles ethnic group.

In 1961, each person was asked the question: "To what ethnic or cultural group did you or your ancestor (on the male side) belong on coming to this Continent?". The language spoken at the time by the person, or his paternal ancestor, was used as an aid in determining the person's ethnic group. The classification is given for 1961 in Table 15 with comparative figures for 1951 and 1941. Information on ethnic group was not collected in the 1956 or 1966 Censuses.

¹ Includes persons born in Canada whose province of birth was not stated.

Subsection 8.—Religious Denominations

In the 1961 Census, enumerators were instructed to record the specific religious body, denomination, sect or community reported in answer to the question: "What is your religion?" Thus, it should be noted that census figures do not measure church membership or indicate the degree of affiliation with any religious body. As shown in Table 18, close to eight out of ten persons in Canada stated that they belonged to one of the three numerically largest denominations—Roman Catholic, United Church and Anglican—in 1961. The table gives comparative figures for the census years 1941 and 1951; this information was not collected in the 1956 or 1966 Censuses.

18.—Principal Religious Denominations of the Population, Census Years 1941, 1951 and 1961

¹ Includes "Hutterites".² Includes "Other Greek Catholic".³ Exclusive of Newfoundland.

Subsection 9.—Languages and Mother Tongues

The term "official language" used by the census refers only to the English and French languages.* "Mother tongue" is the language a person first learned in childhood and still understands. It should be noted that persons indicated as speaking "English only" or "French only" with respect to official language may also speak other languages and have a mother tongue other than English or French. The use of the English and French languages in Canada at the time of the 1961 Census is discussed in a special article appearing in the 1965 Year Book at pp. 180-184. Table 19 gives the numerical and percentage distribution of official language by province in 1961; this information was not collected in the 1966 Census.

* The British North America Act, 1867 (Sect. 133) makes provision for the use of the English and French languages as follows:—

"Either the English or the French Language may be used by any Person in the Debates of the Houses of the Parliament of Canada and of the Houses of the Legislature of Quebec; and both those Languages shall be used in the respective Records and Journals of those Houses; and either of those Languages may be used by any Person or in any Pleading or Process in or issuing from any Court of Canada established under this Act, and in or from all or any of the Courts of Quebec.

The Acts of the Parliament of Canada and of the Legislature of Quebec shall be printed and published in both those Languages."

19.—Numerical and Percentage Distribution of the Population Speaking One, Both or Neither of the "Official" Languages, by Province, Census 1961

NOTE.—See text and footnote above *re* the term "official language".

Subsection 10.—Households and Families

1966 Census data on households and families were not available at the time this Chapter was prepared. Figures available at the time of going to press are given in Appendix II of this volume.

Section 2.—Intercensal Surveys

Intercensal estimates of the population of Canada and of the provinces have many uses. They are necessary to the calculation of costs of certain economic and social legislation. Business, educational and welfare organizations utilize population estimates in planning future development. They constitute a base for vital statistics rates, per capita figures of production and trade, and other analyses. They also have been found useful for estimating labour force and other population characteristics of data collected in sample surveys.

Estimates are constructed for the total population of Canada and for each province and become available about the date to which they apply—June 1 of each year. Population estimates by province are also available on a quarter-year basis. The estimates of population begin with the preceding census counts, to which are added the births of the intervening census year or years and from which the deaths are subtracted; immigrants are added and emigrants subtracted. No complete information is available on emigration. The DBS receives yearly from the United States the number of persons who gave Canada as country of last permanent residence before entering the United States as immigrants (see Chapter IV on Immigration and Citizenship, Part I, Section 3) and from the Registrar-General of Britain the number of emigrants from Canada arriving by sea to take up permanent residence in that country. Such data, however, are not available from other countries but, as indicated by partial data from United Nations sources, the proportion of total emigrants to all other countries is small. Family allowances statistics showing the number of migrant families by province are used in estimating interprovincial shifts in population (see Table 3, p. 192).

The following statement shows the data used in preparing the revised population estimates for the years 1957 to 1965 and the annual estimates for 1967. The next succeeding census serves as a basis for revision of the annual estimates of each intercensal period.

Year	Population at June 1	From June 1 to May 31 of Next Year			
		Births ¹	Deaths ¹	Immigrants	Residual ²
	No.	No.	No.	No.	No.

² Mainly emigration.

21.—Annual Estimates of Population, by Province, as at June 1, 1951-67

NOTE.—At every census the previous post-censal estimates, made at June 1 each year, are adjusted to the newly recorded population figures. Figures for 1951, 1956, 1961 and 1966 are census figures. Figures for 1867-1904 will be found in the 1936 Year Book, p. 141; for 1905-30 in the 1946 edition, p. 127; for 1931-40 in the 1952-53 edition, p. 143; and for 1941-50 in the 1961 edition, p. 165. Figures for 1867-1951 will also be found in *Census of Canada 1951*, Vol. X.

The populations of the provinces classified by sex and age group and the populations of the major cities and metropolitan areas are also estimated as of June 1 each year. Such of these estimates for June 1, 1967 as are available at the time of going to press are given in Appendix II of this volume.

Section 3.—The Native Peoples of Canada

The Indians*

More than 218,000 Canadians are registered as Indians by the Indian Affairs Branch of the Department of Indian Affairs and Northern Development. Registered Indians include all persons descended in the male line from a paternal ancestor of Indian identity, who have chosen to remain under Indian legislation. They are grouped, for the most part, into 558 bands and occupy or have access to 2,274 reserves or settlements having a total area of 6,000,735 acres.

A Departmental census of Indian population taken every five years was discontinued after 1959. The numbers recorded at the three latest censuses—1949, 1954 and 1959—are given in Table 23; the figures for 1961, 1963, 1965 and 1966 are taken from data kept for administrative purposes by the Indian Affairs Branch.

Administration.—Pursuant to the British North America Act, the administration of Indian affairs, which had been under the management of several provinces, came under the jurisdiction of the Government of Canada in 1867. From January 1950 to December 1965, Indian affairs were the responsibility of a Branch of the Department of Citizenship and Immigration. In June 1966 (SC 1966, c. 25) a new Department was formed whereby the Indian Affairs Branch joined with part of the Department of Northern Affairs and National Resources to become the Department of Indian Affairs and Northern Development.

The Indian Affairs Branch is composed of a headquarters staff at Ottawa, eight regional offices and 76 field agencies and district offices. Attached to the headquarters and regional and district offices are specialists in such matters as education, economic development, community development, resource management, social welfare, and engineering and construction. Liaison is maintained with the Medical Services Directorate of the Department of National Health and Welfare, the federal agency concerned with the medical care of Indians.

It is the primary function of the Indian Affairs Branch to administer the affairs of Indians in a manner that will enable them to participate fully in the social and economic life of the country. Underlying administrative duties of the Branch include the management of Indian reserves and surrendered lands, the administration of band funds, estates management, enfranchisement of Indians and the administration of treaty obligations.

Five main objectives are being pursued vigorously in an attempt to assist the Indians in adjusting to the pace of social and economic growth. (1) An accelerated program in education places more emphasis on vocational training, retraining for employment, assistance in placement, adult education, kindergartens and a greater use of provincial schools. (2) The program of industrial and resource development, which in the beginning was a program dependent mainly on the traditional resources of fur, fish, forestry and farming, has been expanded to afford opportunities in new areas through loans and other incentives to foster industrial development on the reserves and to facilitate the relocation of families to places where full-time employment is available. (3) A five-year \$112,000,000 program of reserve improvement has been instituted to provide better housing, water and sewerage systems, electrification and roads. (4) Indian bands, where possible, are being encouraged to operate on the same basis as local municipalities and, where required, grants are given to meet some of the financial needs of the Indian community. (5) Provincial services to Indians are being extended; where bands so desire, discussions are held with the province concerned with respect to the provision of services additional to those already in effect.

Eight Regional Indian Advisory Councils established by the Department provide machinery for effective consultation with representatives of the Indian people. Each Council is composed of eight to 12 Indians elected by the bands in the region, as well as representatives of Indian organizations. The consultation procedure is used to interpret federal policies to the Indians and to obtain the views of the Indians on matters of policy, proposed legislation, federal-provincial agreements, new programs and proposed program changes. The National Indian Advisory Board brings together Indians representing all regions. The Board is made up of 18 representatives named by the Regional Councils on a population basis. Its function is to advise the Department on matters of national importance to the Indian people as distinct from matters of regional interest. In addition, Federal-Provincial Co-ordinating Committees are in operation in most provinces. They meet fairly regularly, some as often as once a month, and perform an important function in guiding the plans and programs of the federal and provincial governments in relation to Indians, and in establishing effective liaison between the governments and a better understanding of their respective objectives, policies and programs.

Education.—This major key to continued Indian progress receives ever-increasing support from Indian parents, from their school committees, from non-federal governments and from professional groups specifically concerned with classroom instruction of Indian pupils. The Indian Affairs Branch maintains and operates a number of schools for Indians but 32,941 of the 64,439 Indian elementary and secondary school pupils attend non-federal schools. Attendance of Indians at non-federal schools has been arranged, for the most part, through agreements between the Branch and individual school boards. In 1964, however, an agreement was concluded with the Province of Manitoba whereby a uniform tuition fee is paid by the Branch for Indian pupils attending schools under the jurisdiction of that province. Manitoba also passed legislation to give Indian children the right to attend any non-federal school.

There are three types of schools operated at the expense of the Federal Government. On many reserves, day schools provide education for children who live at home. Residential schools care for orphaned children, children who come from broken homes and for those who, because of isolation or for other reasons, are unable to attend day schools. A third type of school gives instruction to children confined to hospital. All standard classroom supplies and authorized textbooks are used in federal schools, which follow generally the curriculum of the province in which they are located. Federal financial assistance for pupils attending non-federal schools varies from payment of tuition fees to full maintenance. Promising senior students are awarded scholarships to attend university or vocational school and scholarships are given to those who show promise in the arts.

Resources and Industrial Development.—In the field of renewable resource development programs for Indians, co-operation between the provinces and the Indian Affairs Branch, both formal and informal, continued during 1966-67. Interest in Canadian wild fur continued but prices declined from 5 p.c. to 35 p.c., with muskrat showing the greatest drop, although there were indications of some improvement late in the season. Commercial fishing operations by Indians continued to yield about 20,000,000 lb. and higher prices were received for certain species, notably yellow pickerel. Products from the forests of the reserves included about 90,000,000 ft. b.m. of lumber, 82,000 cords of pulpwood, 1,000,000 fence posts and 900,000 Christmas trees. During the year, arrangements were made with the provinces to give better fire protection to these valuable forest resources. It should be noted here that assistance is given to Indian forest workers for training purposes so that they may participate to a greater extent in mechanized forest operations off the reserves. Oil and gas produced from Indian reserves during 1966-67 had an estimated value of \$12,000,000 and revenues to Indian bands from royalties, bonuses and rentals for petroleum leases amounted to \$3,114,000. It is known that many Indian reserves have considerable mining potential which is now beginning to be developed.

With the consent and participation of the bands concerned, surveys are being undertaken to establish present and potential use of reserve lands. Where required, Indians are being trained to develop and manage their own lands and are assisted in acquiring the equipment necessary for such development. Greater interest is being shown by many bands in utilizing their reserve lands for industrial and commercial purposes and the development of resources on or near reserves is leading to the formation of co-operatives and other processing facilities at more remote reserves. The adaptation of Indian people to Canadian industrial and business life is encouraged, in their reserve communities, by financial and professional help in operating small businesses.

In 1965-66 (latest figures available), Indian people produced about \$1,200,000 worth of handicraft items for sale and for their own use. Interest in their traditional crafts and expanding markets is bringing about a steady growth in this important industry and encouragement is given by the Indian Affairs Branch which maintains a marketing and advisory service, conducts national promotional programs and gives technical and financial assistance. Many Indian people have established successful enterprises based on the production and sale of arts and crafts.

Community Development.—The Community Development Program launched by the Indian Affairs Branch in 1964 has been instrumental in much closer involvement of the Indian people in the management of their own affairs. In their efforts to accept such responsibility, many Indian bands across the country are developing their own municipal type of administration. Forty-eight community development workers hired by the Indian Affairs Branch are assisting and encouraging the Indian people to plan their own future. A Grants-to-Bands Program has been initiated to enable bands to gain program experience and to assist them financially. The cost of the program increased from \$66,892 in 1965-66 to \$445,300 in 1966-67.

Federal-Provincial Community Development Agreements to extend provincial services to the Indian people have been signed with the Provinces of Ontario and Alberta and, as in the past, provincial services have been supplied to the Indian people through informal arrangements in other parts of Canada. In general, under these agreements and informal arrangements, provincial services are available to the Indian people, with the cost shared on a population basis where both Indians and non-Indians are involved.

A program was started in 1965 to develop and perpetuate Indian culture through encouraging Indian fine arts and crafts, literature, dancing, folk songs and related activities. Incentives include grants, subsidies and scholarships to individuals, groups and organizations for the development of their creative and performing talents.

Physical Development of Reserves.—Early in 1966 a plan was announced by the Federal Government for the expenditure of \$112,000,000 over a five-year period for the physical improvement of Indian reserves. The program provides for assistance for housing, safe water supply, sanitation facilities, electrification of homes and improved roads in Indian communities. Following a study of housing conditions on reserves, completed in February 1965, it was indicated that there was a need for 12,000 new homes in the five-year period. The objective of the program is to build these homes with about \$75,000,000 in public funds in conjunction with band funds and personal contributions; 1,769 houses were constructed in 1966-67 and the objective for 1967-68 is 1,959 houses. Some \$10,000,000 will be spent to supply safe drinking water and proper sewage disposal and a rural electrification program is being undertaken, using public utilities wherever possible, at a cost of about \$7,000,000. The remainder will go toward providing better roads. Expenditures on these projects during 1967-68 will amount to approximately \$21,178,000.

Welfare.—The provision of general welfare assistance and services to indigent Indians is an essential factor in assisting them to raise their social and economic status. The welfare program administered by the Indian Affairs Branch includes public assistance (food, clothing and shelter) to dependent Indians and certain categories of non-Indians

living on reserves, care and maintenance of children and adults, and rehabilitation services for physically and/or socially handicapped Indians. Since January 1965, the Branch has adopted the same rates of assistance and the same eligibility conditions as apply to other recipients of public assistance in the Northwest Territories, British Columbia, Alberta, Saskatchewan, Manitoba and Ontario. The scale of food assistance established by the Branch continues in Quebec and the Maritime Provinces.

As there is no specific federal welfare legislation in respect to Indians, the Indian Affairs Branch relies on provincial welfare legislation and provincially accredited welfare agencies for the enforcement of such legislation. In the field of child welfare, the Federal Government has entered into agreement with 25 children's aid societies in Ontario whereby Indian children may receive the same services as non-Indians in accordance with provincial child welfare legislation. There are similar agreements with the Governments of Manitoba and Nova Scotia. The Indian Affairs Branch assumes financial responsibility for both the administrative and maintenance costs of Indian children who are placed in the care of such agencies. Some provinces provide services on a voluntary basis and, by informal arrangements, the Federal Government pays the cost of maintenance of children placed in foster homes or institutions. Where such services are not available, Indian Affairs Branch staff, with the consent of parents or guardians, arrange for care of neglected children in foster homes or institutions. The Branch provides maintenance and care in homes for the aged and other institutions for physically and socially handicapped adults who do not require active medical treatment.

In general, provincial rehabilitation programs are extended to handicapped Indians on the same basis as to non-Indians. Under separate agreements with the Alberta Tuberculosis Association, the Saskatchewan Society of Crippled Children and Adults and the Manitoba Sanatorium Board, the Federal Government assumes financial responsibility for full maintenance and tuition on behalf of Indian students participating in upgrading and social orientation programs in these provinces. The Federal Government is negotiating cost-sharing agreements with provinces to provide Indian residents with the full range of welfare programs administered by provincial governments. A welfare agreement between the Government of Ontario and the Federal Government allows for the inclusion of Indians in the established welfare program of that province.

In addition to the extensive welfare program for Indians financed and administered by the Indian Affairs Branch, welfare services and social benefits available to Indians in Canada include: (1) programs under which Indians are eligible for such categorical benefits as family allowances, youth allowances and old age security, administered by the Department of National Health and Welfare; (2) programs financed jointly by federal and provincial governments and administered by provincial governments, such as old age assistance and blind and disabled persons' allowances; and (3) specific programs established by provincial governments—in Ontario, Indian women may receive mothers' allowances and assistance to widows and unmarried women; indigent Indian mothers in Quebec are eligible for needy mothers' allowances; and, upon application, abandoned children and adult Indians in Nova Scotia receive certain benefits in accordance with the Nova Scotia Social Assistance Act.

The Eskimos*

Canada's Eskimo population is growing rapidly. More than 15,000 now live in scattered camps and settlements of 25 to 500 people, mainly in the Northwest Territories but also in Arctic Quebec (3,000), Labrador (1,000) and northern Manitoba (200). The factors of severe climate and isolation complicated the initial problems of ensuring that all Eskimo people have food, access to health care and warm shelter but good progress has now been made in providing for these basic needs. Medical care is the responsibility of

* Prepared by the Information Services Division of the Department of Indian Affairs and Northern Development, in close co-operation with the Director and officers of the Northern Administration Branch.

the Department of National Health and Welfare (see also p. 300); the Department of Indian Affairs and Northern Development provides education, welfare, economic development and municipal services.

Although some Eskimo families still live in hunting camps and take their living from the land, the trend is strongly toward community living centred around the local school, nursing station, trading store and co-operative building. Most Eskimos now live in permanent housing and their acceptance of new ways that are of advantage to them is symbolized by the fact that in some communities the dog-team, traditionally used for transportation, is being replaced by the skidoo.

With changing conditions, education is a vital factor in the lives of the Eskimo people, both young and old. Although only 15 p.c. of Eskimo children of school age were enrolled in school in 1953, the system has expanded to such an extent that in 1966-67 about 3,300 Eskimo children were registered in 61 schools in the Northwest Territories and Arctic Quebec, this number representing 79 p.c. of the Eskimo school-age population. For the most part, children attend school in their home communities up to grade 6 and then go to larger communities for senior grades and for vocational education. When Eskimo children must leave home to continue their education, the Department provides transportation, room and board in pupil residences, clothing and a small weekly allowance. Senior secondary education is available at four high schools in the Northwest Territories, vocational courses at Yellowknife, N.W.T., and pre-vocational courses at Churchill, Man. In many cases, a special curriculum allows older boys and girls with limited academic training to spend half days on academic upgrading and half in occupational classes.

Eskimo students who attain senior matriculation may attend university through a system of loans and grants established by the Government of the Northwest Territories for all territorial residents. Grants cover transportation, tuition and textbooks and loans may be obtained for costs of maintenance. Although there is only one Canadian Eskimo now attending university, others are advancing into senior high school grades and are potential university material in the years immediately ahead.

In the vocational field, those who have adequate academic training may enter trade schools or technical institutes in the provinces or they may take on-the-job training.

Canada's most northern school is located on the northern coast of Ellesmere Island. It serves the Eskimo population of about 72 as a school for adults and children, a community centre and a church and contains teachers' living quarters. Attendance at education classes is enthusiastic and consistent and the children, by standards, are intelligent and adaptable.

There is quite a demand for Eskimo trainees and it is difficult to find enough of them with adequate academic backgrounds to fill all requests. During the past year, 43 Eskimo men, some with families, moved west to the Mackenzie region and northern Alberta to take on-the-job employment as engine drivers and engine maintenance men on the Great Slave Lake Railway. Another 20 men were employed in mining operations at Lynn Lake, Man. Apprenticeship offers another opportunity for training. Apprentice tradesmen with little education take academic upgrading at night and on-the-job training during the day and at intervals are examined on knowledge of their trade in Eskimo. Throughout the North, there are Eskimo men working at various levels of apprentice training, as heavy equipment operators, plumbers, carpenters and mechanics. They hold positions as interpreters and clerks in retail and co-operative stores and in government offices; one young Eskimo man is acting administrator in Coral Harbour. The objective of the Department, in co-operation with other federal departments in the North, is to have 75 p.c. of federal staff positions in the Territories filled by local residents by 1977. In vocational classes, Eskimo girls train as clerical assistants, stenographers, hairdressers, nursing aides and commercial cooks. Both boys and girls who are interested in teaching begin their careers in settlement schools as classroom assistants, dividing the day between academic studies and work with young Eskimo pupils. Special care is given to the development of curriculum for northern schools and guides are prepared for such subjects as trapping, fur preparation and the care and use of firearms and outboard motors. By 1972, the Department expects to have sufficient classrooms and pupil residence accommodation to provide for every child in the Northwest Territories and every Eskimo child in Arctic Quebec. This will require the construction of more than 200 classrooms and the provision of 1,000 beds in pupil residences.

The adult education program is designed to inform those of the older generation who feel themselves cut off from children in school. Much emphasis in this area deals with the terms and maintenance of the new housing program. Although permanent houses were introduced in 1959-60, Eskimo families could afford to pay very little toward housing costs and were forced into unsatisfactory single-room accommodation. Even families who could purchase a small house often could not afford the high cost of fuel, light and water. It became apparent that a public housing program was needed to assist the Eskimo people and, in October 1965, government approval was obtained for a five-year program to supply rental houses, allocated on the basis of family need. Rent is scaled according to income and services include heating, electricity, basic furniture and maintenance. Construction of three-bedroom houses began in 1966 on Baffin Island and in Arctic Quebec and, in the summer of 1967, 197 houses were shipped to Keewatin settlements. Credits are given to tenants in new houses for extra rental payments and for improvement or additions to the houses, thus providing an incentive toward eventual home ownership. To help solve the problem of fuel oil for heat and electricity, bulk storage tanks have been installed in many locations and more are being added each year; in 1967-68 such facilities are scheduled to be built at Arctic Bay, Broughton Island and Grise Fiord. Housing educators and home economists help to organize local housing committees and to interpret the financial agreements and home maintenance to the people.

In Eskimo communities, the Eskimo people are encouraged to assume management of their own affairs through local or regional councils; practical assistance, advice and financial support are given by the Department of Indian Affairs and Northern Development. In 30 communities a development fund acts as a catalyst in social and economic development.

The full range of social services applicable to all Canadians is available to the Eskimo people—family allowances, old age and disability pensions and blind persons' allowances. A child welfare program cares for children who are neglected or whose parents are temporarily unable to care for them. Social assistance provides for persons whose income from employment or hunting is insufficient to meet their needs and those of their dependants. Medical and public health services are provided for Eskimos not included under provincial arrangements and who are unable to provide for themselves (see also

p. 300). Eskimos in hospitals in the south are kept in touch with distant family members through tape-recorded messages and medical progress reports. Interpreter services are provided to hospital staff. When medical treatment is completed the Department of Indian Affairs and Northern Development is responsible for the repatriation of Eskimo patients to their homes. Rehabilitation may include adjustment training in sheltered employment and the adaptation of artificial limbs and equipment.

The base of the economy in Eskimo communities is gradually broadening. A number of successful Eskimo co-operatives have been established by the Industrial Division of the Department, engaging in the production of arctic charr and arctic trout, fur garment manufacturing, logging, lumbering and house construction, and continuing economic surveys are made to pinpoint local resources that have possibilities of development. It is interesting also that, through tourist promotion, increasing numbers of visitors are being attracted to the wide open spaces north of the provinces for sports fishing and hunting. Eskimo sculpture, prints and fine crafts have gained world-wide recognition and bring \$1,000,000 annually to Eskimo artists. Ceramic sculpture, a remarkable new art form, has been added recently to the artistic accomplishments of the people of Rankin Inlet. Art is a major part of the rich heritage of these people and is supported by cultural exchanges of films, radio programs and exhibitions. Literature in the Eskimo language is being collected and a regular publication *Inuitituit*, edited by an Eskimo, is printed in syllabic script and distributed to Eskimo families in the North.

Although many communities are enjoying a greater cash income through the use of local resources and the capacities of their people, the need for the establishment of new industries to provide employment continues to grow. The young people especially, as they leave school, must have opportunities for employment to relieve them of following the traditional harsh and marginal existence on the land. This might be done by giving financial incentives to secondary industry willing to establish in the North. If employment can be provided in this way as well as through primary industry based on mineral resources, the Eskimo population, with its innate ability to live comfortably in the Arctic, can be a tremendous asset to Canada.

Section 4.—Statistics of World Population

World population figures given in Table 27 are from the *United Nations Population and Vital Statistics Report* for April 1967 and, except as otherwise noted, are mid-year estimates for 1965. Area figures are from the *United Nations Statistical Yearbook 1966*.

Estimated Population of the World by Continents.—The following statement presents adjusted estimates of the 1965 mid-year population of the world by continental divisions. These aggregates do not coincide exactly with the sum of the figures for individual countries because they include, in addition, adjustments for over- and under-enumeration, over-estimation, data for categories of population not regularly included in the official figures, and approximations for the countries that have not provided official 1965 data.

PART I.—IMMIGRATION AND EMIGRATION*

Section 1.—Immigration Policy and Administration

Policy.—Traditionally, Canada has sought to increase its population through immigration in order to expand the domestic market, reduce per capita costs of administration, stimulate economic activity by providing new skills, ideas and enthusiasm, and support a higher level of cultural independence and creativity. Canadian experience indicates that a substantial volume of immigration is highly desirable.

New population cannot be added haphazardly without regard to their means of subsistence or their effect on Canadian life. Technological change and the development of Canadian society to its present complex state require that, to be able to establish themselves successfully, new settlers must be economically competitive in terms of education, training, skills and personal qualities. Over the years, Canada has endeavoured to acquire immigrants who were adaptable to Canadian life. Such persons, finding familiar institutions in Canada, feel more at home and this assists in their establishment in the new life they find here. Canada makes every effort to sustain the movement of immigrants from countries having like economic, social and political backgrounds. On the other hand, qualified people from other countries can integrate successfully into Canadian society and the immigration Regulations recognize this principle. People anywhere in the world have an opportunity to immigrate to Canada if they demonstrate their suitability for life in this country and are likely to become established without hardship to themselves or disruption to the communities in which they settle.

In addition, Canada has on many occasions since the end of World War II sanctioned the entry of thousands of refugees. This is a humanitarian movement and is tangible evidence of Canada's recognition of its responsibilities in the international community. A conservative estimate of the number of refugees admitted since 1945 is 300,000.

On Oct. 1, 1967, Canada adopted new Immigration Regulations which are to be applied universally; these give more recognition to family relationship than the former Regulations and are more closely attuned to Canada's economic needs. These new

* Sections 1 and 2 of this Part were prepared in co-operation with the Information Service, Department of Manpower and Immigration, Ottawa. The history of immigration and the Immigration Act and Regulations up to the mid-1950s is dealt with in detail in a special article entitled "Developments in Canadian Immigration" appearing in the 1957-58 Year Book at pp. 154-176. Supplementing that material is an article on the "Integration of Postwar Immigrants" at pp. 176-178 of the 1959 edition.

Regulations evolved from the White Paper on Immigration, tabled in the House of Commons on Oct. 14, 1966. The proposals provided, for the first time, uniform standards for the admission of non-dependent relatives sponsored by Canadian citizens, regardless of the immigrant's citizenship or country of residence. On Oct. 20, 1966, a Joint Committee of the Senate and the House of Commons was established to study and report upon the White Paper and upon two earlier reports on immigration matters submitted to Parliament in 1965 and 1966 by Mr. Joseph Sedgwick, Q.C. The Committee considered representations by members of Parliament, representatives of provincial governments, private organizations and other members of the Canadian public during the last months of 1966 and the early months of 1967.

It became evident during the meetings of the Committee that many representatives of the Canadian public had reservations about details of the White Paper proposals. The suggestions offered to the Committee were studied in the Department and in April 1967 the Minister presented new proposals to which the Committee gave its approval.

The new Regulations were authorized by Order in Council dated Aug. 16, 1967 (PC 1967/1616), effective as of Oct. 1, 1967. These Regulations present in detail the principles involved in selection of immigrants, whereas the previous Regulations defined who was admissible to Canada only in very general terms. They also indicate the factors that immigration officers will take into account in assessing potential immigrants and the comparative importance of these factors. The new Regulations formally confirm that Canadian citizens or permanent residents of Canada are entitled to bring their dependants to Canada. The privilege of citizens or permanent residents in applying for other more distant relatives to come to Canada is extended to all areas of the world and new classes of relatives become eligible for this assistance; in the past there were geographical limitations on certain categories of relatives.

The assessment system for potential immigrants is based on the following factors: (1) *Education and Training*—up to 20 assessment units to be awarded on the basis of one unit for each successful year of formal education or occupational training; (2) *Personal Assessment*—up to 15 units on the basis of the immigration officer's assessment of the applicant's adaptability, motivation, initiative and other similar qualities; (3) *Occupational Demand*—up to 15 units if demand for the applicant's occupation is strong within Canada and whether the occupation is skilled or unskilled; (4) *Occupational Skill*—up to 10 units for the professional, ranging down to one unit for the unskilled; (5) *Age*—ten units for applicants under age 35 with one unit deducted for each year over age 35; (6) *Arranged Employment*—ten units if the applicant has a definite job arranged in Canada; (7) *Knowledge of French and English*—up to 10 units, dependent upon the degree of fluency in French and/or English; (8) *Relative*—up to five units if the applicant has a relative in Canada able to help him become established but unprepared or unable to sponsor or nominate him; and (9) *Employment Opportunities in Area of Destination*—up to five units if the applicant intends to go to an area of Canada where there is a generally strong demand for labour.

The new Regulations make a clear distinction between dependants and relatives entering the working force. Thus, in the future, there will be three categories of immigrants—"sponsored dependants", "nominated (non-dependent) relatives", and "independent applicants". A "dependant" is defined for immigration purposes as: husband or wife, fiancé or fiancée; unmarried son or daughter under age 21; parent or grandparent over age 60, or younger if widowed or unable to work; an orphaned brother, sister, nephew, niece or grandchild under age 18. Provision is also made for an adopted child and, where the only dependant is a husband or wife, for the nearest living relative. An application for a dependant will be dealt with irrespective of whether he is in Canada or abroad and irrespective of the financial circumstances of the sponsor. He will be admitted to Canada provided he is in good health and of good character.

Canadian citizens and permanent residents may nominate non-dependent relatives for immigration to Canada. The "nominated relative" category includes son and daughter

over age 21, married son and daughter under age 21, brother or sister, parent or grandparent under age 60, nephew, niece, uncle, aunt and grandchild. The responsibilities of the nominator include willingness and ability to provide accommodation, care and maintenance for the person applied for and to otherwise assist him to become established. The nominator will be required to sign such an undertaking for a period of five years. Because of the assistance provided by the nominator in Canada, the nominee will be assessed on only some of the selection factors—education, personal qualities, occupational demand, age and occupational skill. On the general assumption that a Canadian citizen usually will be better established in Canada than a more recent arrival and hence in a better position to give his relative more assistance, a slightly higher preference will be given to a relative nominated by a Canadian citizen than one nominated by a permanent resident.

To qualify for admission to Canada, an "independent applicant" will normally have to obtain 50 of the 100 assessment units available. However, the new selection system is considerably less rigid than the previous practice. Whereas in the past an individual could have been rejected on account of a single factor, such as lack of education, the new Regulations use a combination of factors in such a way that some of them may compensate for relatively low qualifications in others. The major purpose of the new standards, as it was with the old, is to select immigrants who can make a successful adjustment to life in Canada and thereby contribute to Canada's progress.

The main factors for successful establishment are education, personal qualities and occupational demand. As far as the education of the individual is concerned, the principle of successful educational achievement in the immigrant's home has been adopted since it has been found impracticable to equate educational standards in many countries to Canadian standards. In assessment of his personal qualities, the applicant will be considered as to his chances for success in Canada in terms of his economic establishment and his personal satisfaction as well as on the composition and the attitudes of his whole family. The personal assessment process also includes the function of counselling and the applicant will be informed about the market in different areas of Canada for his skills and about the difficulties he may encounter in adjusting to the Canadian way of life. The demand in Canada for the applicant's skill or occupation is given due importance. The Department is responsible for immigration but is equally concerned with manpower and is obliged to discourage immigration for the applicant with an occupation for which there is little or no demand in this country. In cases where there are shortages of labour in certain industries, Canadian employers or provincial officials may interview abroad candidates for such industries and channel them to the Department's visa offices but in these cases, as well as in any others, the candidates must comply with the new selection standards.

The other six selection criteria have individually lesser weight but in total are equal to the three main factors. In considering adaptability in a new environment, occupational skill is important. A person's skill is usually acquired at a price in financial terms. It is an investment and the higher the investment usually the higher the skill and thus a greater gain to Canada. Age must be taken into account when considering adaptability in a new environment. On average, younger people adjust more easily and for this reason the age group up to 35 years is assigned the maximum number of assessment units, with one unit deducted for each year over 35. However, an older person will not be refused on this factor if he has other assets such as highly developed skills which are in demand in Canada. Credit will be given to an applicant who has a firm commitment from a Canadian employer because this will assist his economic establishment during the initial period after arrival. Economic and social adjustment of a new immigrant is greatly facilitated by knowledge of the languages of his adopted country. As a consequence, units of assessment are given to applicants for the degree of their fluency in either English or French or both. An applicant whose mother tongue is other than English or French may be given some credit for even a partial knowledge of either or both of the two languages. In fact, it is possible that such an applicant may obtain more assessment units on the language factor than a unilingual applicant who speaks only English or French. If an applicant has a

relative in Canada who is able to help him become established, credit will be given for this factor since the presence of a relative is a definite asset in the adjustment process.

No one will be compelled to go to any particular area in Canada but, if a prospective immigrant is counselled by an immigration officer to go to an area which offers the best opportunity for him and is prepared to accept that advice, he will be awarded the units appropriate for that area. If the over-all demand for labour is higher in any one area in Canada than in others, the total assessment of the immigrant destined to that area will reflect that high demand. The assessment of individual areas in Canada as to their over-all demand for labour, and the assessment of national demand for individual occupations will be conducted on a continuous basis so that selection officers overseas will be in possession of up-to-date information at all times.

An innovation in the new Regulations is the provision for the admission to Canada for permanent residence of persons who have come as visitors. However, since open acceptance of applications from visitors would be inefficient and would give an undue advantage to some people, a visitor is not given any credit for arranged employment in Canada, so that he must qualify on other factors. Conditions of entry must have been observed and, in particular, the applicant must not have taken employment in Canada if not authorized to do so. Foreign students studying at recognized Canadian institutions will be regarded as any other visitors applying for permanent residence in Canada. However, if foreign students are under an obligation to their government to return to their own country, they will not be permitted to apply for permanent residence in Canada. Applications for permanent residence from seamen on shore leave will not be accepted under the new Regulations.

A sponsor whose application for a dependant is refused will have the right to appeal to the newly constituted independent Immigration Appeal Board. On July 6, 1966, the Minister introduced a Bill in the House of Commons "to make provision for appeals to an Immigration Appeal Board in respect of certain matters relating to immigration". The Bill was passed in the House of Commons on Mar. 1 and given Royal Assent on Mar. 22, 1967. The Act provides for a new Immigration Appeal Board which is a Court of Record entirely separate from the Department and with the authority to enforce its orders. The Act, in addition to providing for appeals against deportation orders, also makes provision for sponsors in Canada to appeal to the Board against the refusal of admission to relatives overseas. The categories of relatives whose refusal may be appealed will be designated by the Governor in Council.

Administration.—The Canada Immigration Division of the Department of Manpower and Immigration administers the Immigration Act and Regulations. The creation of the new Department of Manpower and Immigration, which came into being officially on Oct. 1, 1966, involved some reorganization of the Immigration Division, primarily because a former important part of the activities of the Division, that of the placement and settlement of immigrants in employment in Canada, was to be transferred to the Canada Manpower Division of the Department. This transfer of duties, together with the immigration officers who were trained placement and settlement specialists, took place in February 1967.* The reorganized Immigration Division has three main Branches: (1) the Planning Branch, responsible for the development of the immigration program, for the evaluation and co-ordination of the factors affecting the program, and for the analysis of the results achieved; (2) the Foreign Branch, responsible for the selection of immigrants and for most other activities of the Division outside of Canada; and (3) the Home Branch, responsible for the transportation, admission and reception of, and assistance to, immigrants

* See Chapter XVIII, Section 1, Subsection 1.

on their arrival in Canada, the enforcement of the Immigration Act and Regulations and the counselling of exceptional problem cases. The Home Branch looks after all matters affecting the welfare of immigrants and their integration into the Canadian community except for their placement or settlement in employment.

There are 32 visa offices located abroad at London, Liverpool, Leeds, Bristol, Birmingham, Glasgow, Belfast, Dublin, Paris, Bordeaux, Marseille, Brussels, Berne, The Hague, Copenhagen, Cologne, Berlin, Hamburg, Munich, Stuttgart, Vienna, Stockholm, Lisbon, Madrid, Rome, Milan, Athens, Cairo, Tel Aviv, New Delhi, Tokyo and Hong Kong. The Regional Immigration Headquarters for Continental Europe in Geneva is an administrative centre which does not issue visas. Four offices in the United States—at New York, Chicago, San Francisco and Denver—and a sub-office at Los Angeles, furnish information and counselling but do not issue visas. In addition, the services of immigration officers are available in Canberra, Kingston (Jamaica), Beirut, Rawalpindi, Manila and Port-of-Spain, and information offices, visited at intervals by immigration officers based in Stockholm, are maintained in Oslo and Helsinki. Personnel at all posts are kept in close touch with economic conditions in Canada and thus are able to advise immigrants regarding their prospects for successful establishment. Examination of immigrants and visitors is carried out at 552 ports of entry on the Canadian coasts, at points along the International Boundary and at certain airports and inland offices.

Section 2.—Immigration Statistics

Table 1 shows the number of immigrants arriving in Canada in each year since 1913, the peak year of immigration into the country. Table 2 shows the number and distribution of immigrants in the population of Canada on the latest decennial census date, June 1, 1961, by period of arrival.

1.—Immigrant Arrivals, 1913-66

NOTE.—Figures for 1852-93 are given in the 1942 Year Book, p. 153, and for 1894-1912 in the 1948-49 edition, p. 175.

1923.....	133,729	1934.....	12,476	1945.....	22,722	1956.....	164,857		

Table 2 shows that, according to census figures, 1,507,116 persons reported that they had come to Canada between Jan. 1, 1946 and June 1, 1961. These immigrants constituted about 75 p.c. of the total number of immigrants who arrived in Canada during that period. According to the records of the Department of Manpower and Immigration, 2,033,598 persons entered Canada as immigrants during the period 1946-61. The difference between this total and the 1,507,116 postwar immigrants reported in the 1961 Census, amounting to 526,482 persons, represents the losses due to death and emigration among the postwar immigrant arrivals up to June 1961. Since this difference is arrived at by comparing

statistics derived from two different sources, it must be taken as only an approximate measure of these losses. It is estimated that deaths of immigrants arriving since 1946 would not exceed 86,000 by June 1961. Hence it would appear that roughly 440,000 emigrated in the period between January 1946 and June 1961, or slightly more than one fifth of the total arrivals over this period.

The 440,000 postwar immigrants who appear to have emigrated from Canada up to June 1961 would thus constitute a little over half the total estimated emigration from Canada since 1946, according to data on emigration used in the preparation of annual population estimates. In this connection it might be mentioned that a substantial element in total Canadian emigration is the movement of Canadian-born persons to the United States, some 387,000 entering the United States as immigrants between July 1946 and July 1961 according to the United States Immigration Service records (see p. 241).

¹ Up to the date of the Census, June 1, 1961.

Recent Immigration.—The extent of immigration to Canada in any period is affected both by domestic conditions and by conditions abroad. However, these influences are seldom immediately decisive. News of good economic conditions in Canada predisposes people in favor of this country but, because the immigration process usually takes several months, actual immigration is not always fully coincidental with the economic situation, so that immigration may at times be slight in good years but appear unduly heavy in less buoyant periods. The time-lag caused by selection, medical examination and documentation is unavoidable. Transportation is often another delaying factor and to these considerations must be added the effect of seasonal unemployment in Canada, which tends to discourage immigration during the months from November to April.

In the early 1960s, the Canadian economy experienced a levelling-off, and even a retrenchment in some areas, from its previous high level of activity and this was reflected in the country's intake of immigrants. However, this interval of economic adjustment lasted only a short time and by 1963 immigration had again risen to more normal levels. In that year 93,151 immigrants came to Canada compared with 74,586 the year before. Promotional efforts abroad were intensified. A resident immigration officer was posted to Madrid to service immigration applications in Spain and area offices were established to enable teams of immigration officers to make regular visits to adjoining countries in an effort to broaden the base from which immigrants were selected.

In the following year, the number of immigrants admitted to Canada totalled 112,606, a 21-p.c. increase over 1963. By nationality, British immigrants constituted the largest

number, followed by Italians and citizens of the United States. This increase was attributable to two principal factors—an intensification of promotional and recruiting activities in the main source countries, and an expansion of examination and selection facilities into areas from which Canada received few immigrants before the establishment of the immigration Regulations that came into effect early in 1962. The achievements of 1964 were accomplished despite strong competition in Europe for skilled and educated workers and new postwar levels of prosperity. It is, therefore, of considerable significance that, of the 56,190 immigrants who entered the Canadian labour force in that year, 59 p.c. were in the more skilled categories; 13,177 were in the managerial and professional categories compared with 10,799 in 1963. In 1964, a resident immigration officer was posted to Marseille to expand facilities in France.

In 1965, Canada's demand for skilled immigrant workers once again exceeded the supply. Although skilled workers could be absorbed in large numbers, the need for unskilled workers diminished and for this reason the Immigration Branch continued to emphasize the selection of immigrants possessing professional or other qualifications that would enable them to become established soon after their arrival. Most of the traditional immigrant source countries, particularly in Europe, continued to enjoy buoyant economic conditions. Skilled workers were much in demand and there was strong competition among immigration countries for a share of those skilled workers who were interested in emigration. The number of immigrants admitted to Canada totalled 146,758, a 30-p.c. increase over the preceding year. Immigrant workers who arrived from abroad numbered 74,195, of whom 67 p.c. were in the more skilled categories; those in the managerial and professional categories numbered 18,103. As in the previous year, the major source countries were Britain, Italy and the United States. During 1965, Canadian immigration facilities abroad were substantially improved and expanded. Resident officers were posted to Milan, Italy, and Bordeaux, France, and offices at five other locations were modernized and refurnished. The decision was also made to establish a Regional Headquarters for Continental Europe in Geneva, Switzerland.

The rising trend of immigration continued in 1966. In all, 194,743 immigrants came to Canada in that year, an increase of 32 p.c. over 1965. Immigrant workers numbered 99,210, of whom 74 p.c. were in the more skilled categories compared with 67 p.c. in 1965. Those in managerial or professional categories numbered 25,929, which was almost 43 p.c. above 1965 and nearly double the 1964 figure. Of the total of 194,743 immigrants, 63,291 came from Britain, 31,625 from Italy and 17,514 from the United States. There were significant developments in immigration administration and policy during the year. Briefly, as a result of the reorganization of several Federal Government departments, the Immigration Branch of the former Department of Citizenship and Immigration was amalgamated with large segments of the Department of Labour to form the new Department of Manpower and Immigration. The principal advantages to this alignment are that immigration is now more closely identified with national manpower policies, and the extensive services of the Canada Manpower Division in counselling, placing and assisting workers are now fully available to new immigrants (see pp. 230-231). A new policy for dealing with requests from visitors for permanent residence in Canada was introduced with good effect. This policy is now included in the new immigration Regulations brought into effect on Oct. 1, 1967 (see pp. 227-230).

Analyses of the content of the immigration movement during the years 1964, 1965 and 1966 are given in Tables 3 to 10, and the numbers of persons deported from Canada for various reasons for the same years in Table 11.

Table 3 classifies immigrant admission by country of last permanent residence. During the three-year period shown, 33.4 p.c. of the immigration flow came from Britain and the Republic of Ireland, 42.5 p.c. from Continental Europe, 8.9 p.c. from the United States and 15.2 p.c. from all other countries.

3.—Immigrant Arrivals by Country of Last Permanent Residence, 1964-66

NOTE.—Comparable figures from 1946 are given in the corresponding table of previous Year Books beginning with the 1951 edition; figures in less detail for 1939-45 appear in the 1950 edition, p. 186.

Totals, Immigrants.....	112,606	146,758	194,743

The number of female immigrants coming into Canada was higher than the number of male immigrants in every year from 1957 to 1964. In 1965, however, the trend was reversed, and again in 1966 the number of males exceeded the number of females in total. In the single category, males were predominant up to age 40, whereas in the married category females exceeded males by 1,954, in the widowed category by 3,001 and in the divorced and separated category by 348. Of all persons arriving in 1966 who were 15 years of age or over, 56.1 p.c. were married, 39.5 p.c. were single and 4.4 p.c. were widowed, divorced or separated.

Destinations and Occupations.—Upon arrival in Canada, immigrants are asked to state their intended destinations. According to these records, Ontario absorbed by far the highest proportion of arrivals in the three-year period 1964-66—54.5 p.c. of all the males and 55.0 p.c. of all the females. Quebec was the second province of destination, receiving 21.7 p.c. of the males and 20.3 p.c. of the females, followed by British Columbia with 11.9 p.c. of the males and 12.6 p.c. of the females. The proportions intending to settle in the Prairie Provinces were 9.4 p.c. and 9.8 p.c., respectively, and in the Atlantic Provinces 2.3 p.c. and 2.1 p.c., respectively. The provincial distribution has changed little from year to year throughout the whole postwar period.

In like manner, immigrant arrivals are asked to record the occupations they intend to follow in Canada. Approximately 50.9 p.c. of the persons admitted in 1966 declared that they would enter the labour force. The other 49 p.c. were wives, children and other dependants or were retired persons. Of the male workers, 25.1 p.c. were classed as managerial, professional and technical, 5.0 p.c. were clerical workers, 4.1 p.c. were in service occupations, 30.0 p.c. were in manufacturing, mechanical and construction trades; 9.6 p.c.

were general labourers and 4.3 p.c. were farmers. About 19 p.c. of the female immigrants entering the labour force intended to follow service occupations. Details are given in Table 10.

Deportations.—Deportations by cause and nationality are shown in Table 11 for the years 1964-66. Persons who have not yet acquired domicile (five years of residence in Canada as landed immigrants) may be deported if they fall into prohibited classes at time of admission or within five years of admission, if they have engaged in commercialized vice, have been convicted under the Criminal Code or have become inmates of prisons, or have gained admission by fraudulent means. The causes that may lead to deportation are narrowed after a person has acquired domicile. A person not a citizen may be deported regardless of length of residence if he is found to be a member of a subversive organization or engages in subversive activities, or if he has been convicted of an offence involving disloyalty to the Queen, or if he has, outside of Canada, engaged in activities detrimental to the security of Canada. A Canadian citizen cannot be deported.

11.—Deportations,¹ by Cause and Nationality, 1964-66

Section 3.—Emigration Statistics

Emigration from Canada is an important factor tending to offset to some extent present and past immigration activities. The major outward movement has always, of course, been to the United States and that movement, both of native-born Canadians and of Europeans who originally migrated to Canada, has attained considerable proportions at certain periods. No Canadian statistics on emigration are available but Table 12 gives figures taken from the annual reports of the Immigration and Naturalization Service of the United States Department of Justice. These figures show the numbers of persons entering the United States from Canada during the years ended June 30, 1957-66 with the expressed intention of establishing permanent residence in that country. They do not include persons travelling for pleasure, even for extended periods of time, holders of border-crossing cards (normally issued to persons living in border areas of Canada but working in the United States) or casual tourist crossings in these same areas.

Of the 28,358 Canadian-born persons entering the United States in the year ended June 30, 1966 with the intention of remaining permanently, 13,131 were males and 15,227 females. Slightly fewer than one quarter, or 6,828, of the total native-born emigrants were males in the productive age group, 20-59 years. By occupation, the largest group of the total of 28,358 native-born persons was the professional or technical group which numbered 3,703; clerical and kindred workers numbered 2,426, and 1,415 were classed as craftsmen or foremen. On the other hand, 16,486 persons, or 58.1 p.c. of the total, were classed as housewives, children and others with no reported occupation. Altogether, 43.1 p.c. of the total were persons under 20 years of age.

Of the 37,273 persons entering the United States from Canada claiming Canada as country of last permanent residence—which of course includes native-born persons and those born in other countries who have resided in Canada—the Immigration and Naturalization Service of the United States Department of Justice lists 5,587 as professional, technical and kindred workers, 3,170 as clerical and kindred workers and 2,455 as craftsmen, foremen and kindred workers. Housewives, children and others with no reported occupation accounted for 20,001, or 53.7 p.c. of the total.

PART II.—CANADIAN CITIZENSHIP

Section 1.—The Canadian Citizenship Act

On Jan. 1, 1947, the Canadian Citizenship Act came into effect replacing previous Naturalization Acts in force in Canada. The Citizenship Act created the distinct nationality of a "Canadian citizen" to be recognized throughout the world and it provided a means whereby those non-Canadian British subjects and aliens who were permanently residing in Canada or those who might subsequently immigrate to Canada could apply for the grant of Canadian citizenship. The Citizenship Act provides that all Canadian citizens are recognized as British subjects or Commonwealth citizens, but the reverse is not necessarily true.

The administration of Canadian citizenship was the responsibility of the Department of Citizenship and Immigration from Jan. 18, 1950 to Oct. 1, 1966 when, as a result of the proclamation of the Government Organization Act (SC 1966, c. 25), it was transferred to the Department of the Secretary of State. Naturalization procedures and events leading to the passing of the Canadian Citizenship Act are given in the 1951 Year Book, pp. 153-155. Over the years the Citizenship Act has undergone several amendments, the latest on July 7, 1967. The provisions of the Act, including the 1967 amendments, are outlined briefly in the following paragraphs.

Natural-Born Canadian Citizens, Born before Jan. 1, 1947.—The Act conferred natural-born status upon two categories of persons in being on Jan. 1, 1947. These were (1) those born in Canada or on a Canadian ship or aircraft and who were not aliens on Jan. 1, 1947; and (2) those born of Canadian fathers outside of Canada who were not aliens on Jan. 1, 1947 and were either minors on that date or had already entered Canada for permanent residence.

The Act provides that a person born abroad who was a minor on Jan. 1, 1947 will automatically cease to be a Canadian citizen on his 24th birthday or on Jan. 1, 1954, whichever is the later date, unless he has his place of domicile in Canada at such date or has, before such date and after reaching the age of 21 years, filed a declaration of retention of Canadian citizenship.

Natural-Born Canadian Citizens, Born after Dec. 31, 1946.—A person born outside of Canada subsequent to that date, whose responsible parent is considered a Canadian citizen pursuant to the terms of the Canadian Citizenship Act, is a Canadian if his birth is registered with the Registrar of Canadian Citizenship within two years of its occurrence or within such extended period as the Minister may authorize in special cases.

A person who becomes a natural-born Canadian citizen in such a manner will automatically cease to be a Canadian citizen if he fails to file a declaration of retention prior to his 24th birthday or does not have his place of domicile in Canada upon that date.

Newfoundland and Canadian Citizenship.—On Apr. 1, 1949, Newfoundland became the tenth province of Canada and every person born therein or naturalized or every British subject who had domicile in Newfoundland on that date or every woman who married a citizen of Newfoundland and took up residence there before Apr. 1, 1949 became a Canadian citizen. They acquired the right of conferring Canadian citizenship by descent to their children born outside of Newfoundland in the same manner as those who had previously become Canadians. Persons born outside of Newfoundland to Newfoundland parents are natural-born Canadian citizens provided they were either a minor on Apr. 1, 1949 or had before that date been lawfully admitted to Canada or Newfoundland for permanent residence. However, a person who was a minor on Apr. 1, 1949, ceased to be a Canadian on his 24th birthday or on July 1, 1968, whichever is the later date, unless he has his place of domicile in Canada at such date or has before such date, and after reaching the age of 21 years, filed a declaration of retention of Canadian citizenship. A person born outside of Canada to Newfoundland parents after Mar. 31, 1949 is a natural-born Canadian if his birth is registered with the Registrar of Canadian Citizenship within

two years of its occurrence or within such extended period as the Minister may authorize in special cases. A person who becomes a natural-born Canadian in such a manner will automatically cease to be a Canadian citizen if he fails to file a declaration of retention prior to his 24th birthday or does not have his place of domicile in Canada on that date.

Canadian Citizens other than Natural-Born.—Before the 1953 amendments to the Citizenship Act, the only persons who acquired Canadian citizenship on Jan. 1, 1947 through the transitional clauses of Sect. 9 were persons who were naturalized in Canada before that date, British subjects who had Canadian domicile at the commencement of the Act and women lawfully admitted to Canada and married prior to Jan. 1, 1947 whose husbands would have qualified as Canadian citizens if the Act had come into force before the date of marriage. Sect. 9 was amended on June 1, 1953, so that a British subject who had his place of domicile in Canada for at least 20 years immediately before Jan. 1, 1947 need not comply with the requirements of Canadian domicile provided he was not under an order of deportation on Jan. 1, 1947.

Acquisition of Canadian Citizenship by Aliens or British Subjects.—An adult non-Canadian British subject or an alien who wishes to become a Canadian must formally file an application for citizenship. The non-Canadian British subject may file an application direct with the Registrar of Canadian Citizenship, whereas an alien must file an application through his local court, or through one of the special citizenship courts now established or, if he lives more than 50 miles from a court, he may mail his application to the Registrar of Canadian Citizenship in Ottawa, who will file it with the appropriate court. After the application has been 'posted' for three months, he shall appear before the court for examination. In either case the same requirements are generally applicable:—

- (1) He must have resided in Canada for 12 of the 18 months immediately preceding the date of his application.
- (2) He must have been lawfully admitted to Canada for permanent residence and either have acquired Canadian domicile before July 7, 1967, or have resided in Canada for five of the eight years immediately preceding the filing of his application. Persons living in Canada before obtaining "landed immigrant" status may count half of each full year before landing toward the residence qualification. The wife of a Canadian needs only to be admitted for permanent residence and reside in Canada for one year.
- (3) He must be of good character and not under an order of deportation.
- (4) He must have an adequate knowledge of either English or French or, alternatively, he is the spouse, widow or widower of a Canadian or, either he was 40 or more years of age at the time of lawful admission and has resided in Canada for more than 10 years or he was less than 40 at the time of admission and has resided continuously in Canada for more than 20 years.
- (5) He must have an adequate knowledge of the responsibilities and privileges of citizenship.
- (6) He must intend to comply with the Oath of Allegiance and to have his place of domicile permanently in Canada.

At the conclusion of a court hearing, the decision of the court is forwarded to the Minister responsible for the administration of the Canadian Citizenship Act. If the decision is favourable and a certificate of Canadian Citizenship is granted by the Minister, it is forwarded to the clerk of the court who shall inform the applicant of the date and time he is to appear before the court to take the Oath of Allegiance, renounce his previous nationality and receive his certificate. Where a court finds that an applicant does not possess the required qualifications to be granted citizenship, the Minister, upon receipt of the decision, will so advise the applicant and give him notice that he may, within 30 days of receipt of such notice, appeal the decision to the Citizenship Appeal Court. The Citizenship Appeal Court consists of one or more designated judges of the Exchequer Court of Canada. If a court rejects an application and this decision is upheld by the Citizenship Appeal Court or if an application is refused by the Minister, the applicant has the right to file a new application two years after the date of rejection.

Status of Married Women.—The Canadian Citizenship Act places no disabilities upon the married woman. She neither acquires nor does she lose Canadian citizenship by marriage. In order to acquire Canadian citizenship she must apply in exactly the same

manner as does a man. The Canadian Citizenship Act also enables a woman married to an alien whose nationality she acquired upon marriage to divest herself of Canadian citizenship by the filing of a declaration of renunciation. Finally, it provides a means whereby a woman, who had become an alien through marriage prior to Jan. 1, 1947, may acquire the Canadian status she would otherwise have assumed on that date.

Status of Minor Children.—Alien and British subject minor children do not automatically become Canadians with their parents. After one parent has become a Canadian, the father as the responsible parent, or the de facto guardian, or mother if she has custody of the child may apply for citizenship on his behalf and application is made to the Registrar of Canadian Citizenship. Provision is also made in the Citizenship Act for the granting of a certificate of citizenship to a minor child in special circumstances.

Loss of Canadian Citizenship.—Canadian citizenship may be lost in the following manner:—

- (1) A Canadian citizen who when outside of Canada and not under disability acquires by a voluntary and formal act other than marriage the nationality or citizenship of a country other than Canada. This does not apply if the country is at war with Canada at the time of acquisition but in such a case the Minister may order that he cease to be a Canadian citizen. The purpose of this is to hold the person, if deemed necessary, to his obligations as a Canadian.
- (2) A natural-born Canadian citizen who is a dual national by birth or through naturalization, and any Canadian citizen on marriage, may after attaining the age of 21 cease to be a Canadian citizen through the making of a declaration of renunciation thereof.
- (3) A Canadian citizen who under the law of another country is a national or citizen of such country and who serves in the armed forces of such country when it is at war with Canada. This does not apply if the Canadian citizen became a national or citizen of such country when it was at war with Canada.

Prior to the 1967 amendments of the Citizenship Act, a person, other than a natural-born Canadian, who since becoming a Canadian had resided outside of Canada for 10 consecutive years automatically ceased to be a Canadian; this provision for automatic loss has been removed from the Citizenship Act.

Loss of Citizenship by Revocation—*Applicable Both to Non-natural-Born and to Natural-Born Canadians.*—Prior to the 1967 amendments of the Citizenship Act, loss of Canadian citizenship by revocation was limited under certain provisions of the Act only to non-natural-born Canadians. This discriminatory distinction between non-natural-born and natural-born Canadians has been removed from the Citizenship Act and the following substituted: Canadian citizenship may be revoked by the Governor in Council if, upon a report from the Minister, he is satisfied that *any Canadian citizen* has, when not under a disability, (1) acquired voluntarily, when in Canada, the citizenship of a foreign country (other than by marriage); (2) taken or made an oath affirmation or other declaration of allegiance to a foreign country; (3) made a declaration renouncing his Canadian citizenship; or (4) obtained Canadian citizenship by false representation or fraud or by concealment of material circumstances.

Doubt as to Loss of Citizenship.—Where in the opinion of the Minister a doubt exists as to whether a person has ceased to be a Canadian citizen, the Minister may refer the question to the commission referred to in the Citizenship Act for a ruling and the decision of the commission or the court, as the case may be, shall be final.

Section 2.—Canadian Citizenship Statistics

According to the 1961 Census, which required that each person state the country to which he owed allegiance and had citizenship rights as at June 1, 1961, less than 6 p.c. of Canada's population reported a country of citizenship other than Canada. Table 1 shows the citizenship of the population by province.

1.—Citizenship of the Population, by Province, Census 1961

¹ Represents only those cases reported to the Citizenship Branch by posts abroad.

Characteristics of Persons Granted Citizenship Certificates in 1966.—Comparable detailed statistics showing the characteristics of persons granted citizenship certificates are available since 1953; such characteristics include age, marital status, occupation, period of immigration, residence and previous nationality. The number of applicants fluctuates from year to year but it is known that about 40 p.c. of the immigrants who entered Canada during the past ten years who are eligible for Canadian citizenship have become Canadians.

Of the 60,852 persons granted citizenship in 1966, fewer than 1 p.c. had immigrated to Canada before 1921, 2 p.c. in the period 1921-40, 7 p.c. in the period 1941-50 and 91 p.c.

after 1950. Regionally, these new citizens were distributed as follows: 2 p.c. in the Atlantic Provinces, 18 p.c. in Quebec, 54 p.c. in Ontario, 14 p.c. in the Prairie Provinces and 12 p.c. in British Columbia. Almost 87 p.c. of them resided in urban centres.

About 21 p.c. of the persons naturalized in 1966 previously owed allegiance to a British Commonwealth country, 17 p.c. were former citizens of Italy, 13 p.c. of Germany, 9 p.c. of the Netherlands, 4 p.c. of Hungary, 5 p.c. of Greece and 5 p.c. of Yugoslavia. Most of the persons designated as "stateless" were born in Poland, the U.S.S.R., Yugoslavia, Hungary, Germany, Czechoslovakia and Romania.

Among the males in the labour force naturalized in 1966, craftsmen, production process and related workers occupations were reported by 46 p.c., 11 p.c. were in service and recreation occupations, 13 p.c. were in professional and technical occupations, labourers accounted for 8 p.c., managerial occupations for 6 p.c., clerical workers for 4 p.c. and farmers and farm workers for 4 p.c. each. Of the females, 47 p.c. were homemakers and, among those employed outside the home, 31 p.c. were in the craftsmen, production process and related workers occupations group, 24 p.c. were in service and recreation occupations and 25 p.c. were in clerical occupations.

English or French language courses are made available for persons migrating to Canada from many lands, operated in most cases by the municipal school systems. This English class, held in the new High School of Commerce in Ottawa, is sponsored by the Adult Education Division of the Collegiate Institute Board. An Ontario Department of Education grant pays a large part of the instruction costs.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. xvi of this volume.

Vital statistics provide a key to the interpretation of population development—a measure of the pace at which the population is growing, the rate at which women are marrying and reproducing, and the effect this has on the age and sex distribution of the population, as well as the relative importance of the diseases that cause death each year. Vital statistics constitute the record of births, deaths, marriages and divorces registered in the provinces and territories of Canada. The continuity of such data gives a constant guide to the planning, operation and evaluation of many national activities, particularly in the fields of public health, education, community planning and various types of business enterprise.

This Chapter gives a fairly detailed coverage of the vital statistics information available, gives life tables for males and females and presents a comparison of the principal Canadian vital statistics rates with those of other countries. In making international and interprovincial comparisons of birth, death and marriage rates, it is important to note that part of the differences observed over a period of years as between countries, provinces or local areas may be caused by differences in the sex and age distribution of the populations involved. Similarly, rates for any one area may be affected by changes in such distribution. The population data upon which vital statistics rates are computed are given in Chapter III of this volume. Births and deaths are classified by place of residence (births according to the residence of the mother) and marriages by place of occurrence.

The history of the collection of vital statistics in Canada is covered in the 1948-49 Year Book, pp. 185-188. Detailed information is given in *Vital Statistics* (Preliminary Report) (Catalogue No. 84-201), *Vital Statistics of Canada* (Catalogue No. 84-202), *Causes of Death* (Catalogue No. 84-203) and in other regular and special reports; in addition, certain unpublished data are available on request.

This Chapter includes the most recent data available at the time of going to press; certain tables therefore include 1966 data while others are up-dated to 1965 only.

* Revised in the Vital Statistics Section, Health and Welfare Division, Dominion Bureau of Statistics.

Section 1.—Summary of Vital Statistics

Table 1 gives a summary for reference purposes of the principal vital statistics of the provinces and territories of Canada for five-year periods 1941-65 and for single years 1964-66. Table 2 shows similar data for urban centres having at least 20,000 population at the date of the 1961 Census for the year 1965 with comparative averages for 1956-60.

1.—Summary of Principal Vital Statistics, by Province, 1941-66

NOTE.—Figures from 1921, when the collection of national statistics was initiated, are given in previous editions of the Year Book. Figures for neonatal mortality (within the first four weeks of birth) are given on p. 276 and those for divorces on p. 285.

¹ Excess of births over deaths.² Deaths under one year of age; deaths within the first four weeks of

birth are given on p. 276.

³ Per 1,000 population.⁴ Per 1,000 live births.⁵ Per 10,000 live births.⁶ Figures for Newfoundland are included from 1949.

2.—Summary of Principal Vital Statistics for Incorporated Urban Centres of 20,000 Population or Over,¹ 1965 with Average for 1956-60

NOTE.—Birth, death and natural increase rates cannot be computed for 1965 or the period 1956-60 since urban centre populations are not known for intercensal periods. Figures for certain urban places may not be comparable for the periods shown because of changes in area boundaries, particularly for those indicated by an asterisk (*). Urban centres are designated in this table by the following abbreviations: c.=city, t.=town, vl.=village and d.m.=district municipality.

¹ As at the date of the 1961 Census; residents only.

² Excess of births over deaths.

³ Deaths under one year of age.

⁴ Deaths under 28 days.

⁵ By place of occurrence.

⁶ Per 1,000 live births.

⁷ Population fewer than 20,000 at date of 1961 Census but included as the largest urban centre in Prince Edward Island.

VITAL STATISTICS RATES, 1925-66

Section 2.—Births*

No accurate figures on Canadian crude† birth rates are available prior to 1921, when the annual collection of official national figures was initiated. However, the following rough estimates of the average annual crude rates for each ten-year intercensal period between 1851 and 1921 may be inferred from studies of early Canadian census data:—

Intercensal Period	Estimated Average Annual Crude Birth Rate (per 1,000 Population)	Intercensal Period	Estimated Average Annual Crude Birth Rate (per 1,000 Population)
1851-61.....	45	1891-1901.....	30
1861-71.....	40	1901-11.....	31
1871-81.....	37	1911-21.....	29
1881-91.....	34		

* Unless otherwise indicated, "births" in this Section refer to infants born alive; stillbirths are dealt with under a separate heading on pp. 263-265 and under multiple births on pp. 258-259. For international comparisons, see Section 7, pp. 289-290.

† A crude rate is one based on the total population.

The general trend in the national crude birth rate (i.e., per 1,000 total population) since 1925 is shown in the chart on p. 255 and since 1941 in Table 1. The annual rates declined gradually but steadily from 29.3 in 1921 to a record low of 20.1 in 1937, recovered sharply in the late 1930s and during World War II to 24.3 in 1945, and in the two years following the War rose to a postwar high of 28.9 in 1947. Between 1948 and 1959 the rate remained remarkably stable at between 27.1 and 28.5 but has since been declining and in 1966 reached 19.4, the lowest on record. Part of this decline is attributable to the fact that the crude birth rate is based on *total* population, which now includes larger proportions of 'non-productive' population, as well as to the fact that the large, immediate postwar cohorts of married women are now approaching the end of their reproductive periods and have completed their families. Further, even if the annual number of births were to remain stable, the net effect of an increase in population would be a declining crude birth rate.

The rates in most provinces followed trends very similar to the national trend but showed some regional differences in recent years. Although all provinces had record high rates immediately following World War II, average birth rates in Ontario and the western provinces were higher during the 1951-55 period than during 1946-50 and those for Quebec and the Maritimes were lower than during 1946-50. In fact, Ontario, Alberta and British Columbia had record high crude birth rates during the 1956-60 period. However, in 1966 most of the provinces recorded their lowest rate since the early years of the War, but Nova Scotia, New Brunswick and Quebec had *record* low rates.

It is often erroneously assumed that the Province of Quebec has not only the largest number of births annually but the highest rate in Canada. Since the late 1930s or early 1940s Newfoundland, in some years New Brunswick and, since 1953, Alberta have had higher birth rates than Quebec. Table 1, pp. 250-251, shows that six provinces—Newfoundland, Alberta, New Brunswick, Prince Edward Island, Nova Scotia and Saskatchewan, in that order, had higher crude rates than Quebec or Ontario in 1966, followed by Manitoba and British Columbia. However, since these crude rates are based on the *total* population they do not reflect the fertility of the women of reproductive ages in the different provinces or the number married within these reproductive ages. A more accurate measure of the true birth rate is one based on the number of married women between the ages of 15 and 45 (see pp. 259-261).

Also contrary to popular impression, since 1953 more babies were born each year in Ontario than in the Province of Quebec; in 1966, 131,942 babies were born to Ontario mothers as compared with 109,878 to Quebec mothers. Altogether, 387,710 children were born alive in Canada in 1966, 91,565 fewer than the record 479,275 born in 1959 and 30,885 fewer than the number born during 1965.

Sex of Live Births.—With rare exceptions, wherever birth statistics have been collected they have shown an excess of male over female births. No conclusive explanation of this excess has yet been given. Nevertheless, it is so much an accepted statistical fact that a proper ratio of male to female births has become one of the criteria of complete registration. The number of males to every 1,000 females born in Canada has averaged around 1,057 since the middle 1930s. Provincial sex ratios vary much more widely because of the relatively small number of births involved—the smaller the total number of births, the greater the chance of wide sex-ratio variations from year to year. Another commonly acknowledged fact in many countries—although there is no generally accepted explanation for it—is that the male ratio appears to rise during or shortly after major wars. This seems to have happened in Canada between 1942 and 1945 when the ratio rose to an average of 1,064 during these four years as compared with averages of 1,054 between 1931-41 and 1,056 since 1946. In 1966, 1,054 male infants were born for every 1,000 females.

3.—Sex Ratios of Live Births, 1941-66

NOTE.—Figures for Newfoundland are included from 1949 and those for the Yukon and Northwest Territories from 1950.

1958.....	241,675	228,443	1,058				

Hospitalized Births.—In 1966, 99.2 p.c. of all Canadian births occurred in hospitals as compared with 88.4 p.c. ten years previously. Table 4 shows the rise in hospitalized births in each province since 1941. Before the initiation in 1958 of the federal-provincial hospital insurance programs—in which all provinces were participating by 1961—there were rather wide variations among the provinces in percentages of hospitalized births. Such variations were caused by the existence of prepaid or provincially sponsored hospital, maternity or medical care plans in some provinces, the unavailability of hospital facilities in others—particularly in remote rural areas—and preference for home delivery in some local areas. Although some variation still exists, the operation of the hospital insurance program has probably been responsible for the noticeable increases in hospitalized births in provinces that previously had lower proportions, for example, in New Brunswick where the hospital insurance plan was put into effect on July 1, 1959, and in Quebec where the plan went into effect in 1961.

¹ Excludes Newfoundland for which data are not available.

Births in Urban Centres.—Table 2, pp. 252-254, shows the number of births in 1965, as compared with the average for 1956-60, to mothers residing in each urban centre of 20,000 population or over in 1961. Because the populations of urban centres are not known for intercensal years, birth rates cannot be computed for the 1956-60 period or for 1962-65.

Illegitimacy.*—In 1966, 7.6 p.c. of the live births in Canada were illegitimate. This percentage is low compared with that of many countries of the world but has been rising recently, as shown in Table 5.

¹ Figures for Newfoundland are included from 1949 and those for the Yukon and Northwest Territories from 1951.

Multiple Births.—Approximately one confinement in 97 in Canada resulted in the birth of more than one child in 1965 as compared with one in 85 several years ago; in other words, the chances of a confinement resulting in the birth of more than one child are fewer now than formerly. One out of 97 confinements resulted in twins and one out of 13,000 in triplets. Two sets of quadruplets were born in Canada during 1960—the first since 1957—and one set in each of 1962, 1963 and 1964; there were no quadruplets in 1965. In 1965 a total of 419,093 mothers bore a total of 423,464 infants, of which 418,595, or almost 99 out of every 100, were born alive.

Table 6 shows that the proportion of stillbirths is higher among multiple than among single births.

* The term "illegitimate", as used here, does not refer to all births conceived out of wedlock but is necessarily restricted to those in which parents reported themselves as not having been married to each other at the time of birth or registration and, in Ontario, to those in which the marital status of the mother was reported as "single" at the time of birth or registration.

¹ Unless otherwise indicated, includes only foetuses of 28 or more full weeks gestation.
² Includes 30 stillbirths of 20-27 weeks gestation.
³ Includes 45 stillbirths of 20-27 weeks gestation.
⁴ Includes 29 stillbirths of 20-27 weeks gestation.
⁵ Includes 22 stillbirths of 20-27 weeks gestation.

Fertility Rates.—The sex and age composition of a population is obviously an important factor in determining crude birth, marriage and death rates. Since almost all children born each year are to women between the ages of 15 and 45, variations in the proportion of women of these ages to the total population will cause variations in the crude birth rate of different countries—or of different regions within a country—even though the actual rates of reproduction or *fertility* of the women in these age groups in each country or region are identical.

A more accurate measure of the fertility of a population would be one based on the number of women of reproductive age, that is those 'able' to bear children, and a still more accurate measure would be one based on the number within this group that are married, that is those 'eligible', as it were, to bear children. Each type of rate has its uses, depending on the comparisons required. The two types are compared in Table 7, and indicate the variations in each type as between provinces and the provincial trends over the years 1963-66.

The number of infants born in relation to every 1,000 women in the population between the ages of 15 and 45 has been declining for the past few years, dropping from 121 in 1963 to 93 in 1966. However, the rates varied among the provinces from 86.6 to 169.9 during the past four years; in 1966, Newfoundland, Prince Edward Island, New Brunswick, Saskatchewan, Nova Scotia and Alberta had the highest rates and Quebec, British Columbia, Ontario and Manitoba, the lowest, in order of mention. On the other hand, the average annual number of infants born to every 1,000 *married* women in the country as a whole dropped from 173 to 134 during the same period. According to this measure, the western provinces and Saskatchewan had, on the whole, the highest rates.

¹ Since the number of births to women over 44 is quite small, rates are here restricted to women under 45.

² Excludes the Yukon and Northwest Territories.

The rates shown in Table 7 are *crude* in the sense that they do not take into account differences in fertility in the component age periods within the female reproductive life span, nor the proportions of married women in each age period. It is therefore conventional practice to calculate what are termed *age-specific fertility rates*, i.e., the number of infants born annually to every 1,000 women in *each* of the reproductive age periods, again either for all women or for those who are married. Table 8 provides these two sets of rates—the former for 1941, 1951 and 1956-66 and the latter for 1962-66 in addition to the census years from 1941 to 1961.

Another measure of fertility in a country is obtainable from what is conventionally referred to as a *gross reproduction rate*. The gross reproduction rates shown in Table 8 indicate the average number of female children born each year to each woman living through the child-bearing ages. In other words, this figure represents the average number of females that *would* be born to each woman who lived to age 50 if the fertility rate of the given year remained unchanged during the whole of her child-bearing period. A gross reproduction rate of 1.000 indicates that, on the basis of current fertility and without making any allowance for mortality among mothers during their child-bearing years, the present generation of child-bearing women would exactly maintain itself. Canada has always had one of the highest gross reproduction rates among the industrialized countries of the world. Even during the period of low birth rates in the 1930s the rate varied between 1.300 and 1.500 and since World War II has ranged from 1.640 to a record high of 1.915 in 1959; in 1966 the rate stood at 1.369, still 37 p.c. more than the number required for the population to replace itself. With minor exceptions, provincial reproduction rates are also well above the replacement level.

Table 8 indicates that in 1966, considering all women whether married or not, women in their 20s were the most reproductive, as might be expected; on the average, for every 1,000 women between the ages of 20 and 25, 169 infants were born during that year or expressed another way, about one woman out of six in that age group gave birth to a live

born infant. This compares with a rate of 164 for women in the age group 25-29. However, among married women, teen-age mothers have consistently had the highest fertility, with about one out of two bearing a child in 1966, while more than one out of every four married women in their early 20s had a child as compared with about one in five women in their late 20s.

Age of Parents.—Age of parents is an important variable in any analysis of birth statistics. The distribution of legitimate and illegitimate live births by age of the parents is given in Table 9.

Over 8 p.c. of the legitimate children born in 1965 were born to mothers under 20 years of age, in almost two fifths of the births the mother was under 25 years, and in over two thirds, under 30 years; in over one fifth of the births the father was under 25 years of age, and in over one half of all births the father was under 30 years. On the other hand, almost two fifths of the illegitimate infants were born to mothers under 20 years of age and almost an additional 36 p.c. to mothers under 25 years. The average age of all the married mothers to whom a child was born in 1965 was 27.8, and of the fathers 31.0 years; ten years ago, the average ages of the parents were 28.4 and 31.8, and thirty years ago 29.2 and 33.7, respectively.

The median age of unmarried mothers who bore a live-born child in 1965 was 21.1; that is, half of the mothers of the 27,305 'illegitimate' children delivered in 1965 were under 21.2 years of age.

Order of Birth.—Table 10 shows the order of birth of all live-born infants in 1965 according to the age of the mother. As would be expected, 32,698, or over three fourths of the 41,740 infants born to mothers under 20 years of age, were the first live-born child, whereas almost 11 out of every 20 of the children born to mothers of 20-24 years were their second or later live-born child. In 1965, 196 infants were born to mothers who had not yet reached their 15th birthday.

Birthweight.—Excluding Newfoundland, information on birthweight of newborn infants has recently become available from provincial records of birth. These data, in addition to their usefulness in calculating the average weights of newborn infants, are of importance from the public health and medical points of view in throwing light on the number of immaturely developed foetuses that are delivered alive. According to criteria recommended by the World Health Organization, infants of 5½ lb. or less at birth are considered 'immature' and hence exposed to a much greater risk of dying than those over this weight. Weight at birth depends on a host of maternal factors, most of which are not included in the birth records, but some information is available on the age of the mother and length of pregnancy before delivery.* Analysis of this information shows that (1) there are variations in average weight according to the age of the mother, (2) women under 20 and over 35 tend to produce higher proportions of immature infants, so that the late 20s and early 30s would appear to be the ideal ages for motherhood, and (3) almost all infants of less than 28 weeks gestation are delivered 'immature' according to the definition. The average single male infant born at full term weighs about 7½ lb. at birth and the average female about 4 oz. less.

Stillbirths.†—The 4,429 stillbirths of at least 28 weeks gestation that were delivered in 1966 represented a ratio of 11.4 for every 1,000 foetuses born alive. As is evident from Table 12, the stillbirth rate has been decreasing steadily and has been cut by more than half over the past quarter-century. Although the variations between provincial rates have never been wide, rates in some provinces have been reduced more than in others. The stillbirth rate among unmarried mothers has been consistently higher than that among married mothers but the difference is narrowing.

* Obtainable from the Vital Statistics Section, DBS.

† Stillbirth figures given here refer only to foetuses of 28 or more weeks gestation which "showed no sign of life". Up to the end of 1963, only foetuses delivered after at least 28 weeks pregnancy which showed no sign of life were required to be registered with the provincial authorities; as of Jan. 1, 1964, all provinces (except Newfoundland) provide for the compulsory registration of all stillbirths of 20 or more weeks gestation, a 'stillbirth' being defined as "the complete expulsion or extraction from its mother, after at least 20 weeks pregnancy, of a product of conception in which, after such expulsion or extraction, there is no breathing, beating of the heart, pulsation of the umbilical cord, or unmistakable movement of voluntary muscle". Available data for stillbirths of 20-27 weeks pregnancy are not shown here but are obtainable from the Vital Statistics Section, DBS.

¹ Exclusive of Newfoundland for all years and the Yukon and Northwest Territories for 1941-50
for Newfoundland are included from 1949.

² Figures

Table 13 illustrates the fact that the risk of having a stillborn child increases with the age of the mother. Although stillbirth ratios for mothers of all ages have been declining, they continue to be three to four times as high for mothers over 40 years of age as for mothers under 30. The average age of mothers who bore stillborn children in 1965 was 29.9 years; the median age was 29.1. The average age of mothers who bore legitimate live-born children was 27.8 and of those who bore illegitimate live-born offspring was 23.2. Causes of stillbirths in 1965 are shown in Table 14.

Section 3.—Deaths*

No official crude† death rates are available prior to 1921, but some indication of these may be obtained from studies of the early censuses as follows:—

<i>Intercensal Period</i>	<i>Estimated Average Annual Crude Death Rate (per 1,000 Population)</i>	<i>Intercensal Period</i>	<i>Estimated Average Annual Crude Death Rate (per 1,000 Population)</i>
1851-61.....	22	1891-1901.....	16
1861-71.....	21	1901-11.....	13
1871-81.....	19	1911-21.....	13
1881-91.....	18		

As is typical of pioneer populations, Canada had a high death rate in the mid-1850s when the country was still in the throes of pioneer settlement. The crude death rate during that period is estimated as between 22 and 25. Although no data are available, it is assumed that, while mortality at all ages was high, the rate among infants, children and young adults must have been particularly high since even in the 1920s mortality in these ages was still quite high. With the gradual increase in population density and in urbanization and improved sanitation and medical services, the crude rate was halved during the 80 years between 1851 and 1930, dropping from about 22 to 11. It declined steadily to slightly over 8 in the late 1950s and dropped to a low of 7.5 in 1966. This is one of the lowest crude death rates in the world.

Table 1, pp. 250-251, shows the trends since 1941 in the provinces and territories. The generally low rates in the Prairie Provinces are partly the result of their younger average population; the uniformly higher rate in British Columbia is attributable mainly to a high proportion of people in the older age groups.

Subsection 1.—General Mortality

Age and Sex Distribution of Deaths.—During the period of national vital statistics (1921 to date), the mortality pattern at all ages has been steeply downward. Of major significance in lowering the over-all death rate were the reductions in infant mortality, in childhood death rates and in those of young adults. In 1931, over 19 p.c. of all male deaths occurred among persons of five to 44 years of age; in 1965, 10.5 p.c. took place in this age group. Among females in the same age group the proportion dropped from just under 22 p.c. in 1931 to 7.5 p.c. in 1965.

* For international comparisons, see Section 7, pp. 289-290.

† A crude rate is one based on the total population.

Tables 15 and 16 illustrate the very large reductions in death rates that have taken place since 1931 in each age group of the population. By far the greatest reductions have been among the young of both sexes. However, even though the rates for females at every age have always been consistently lower than those for males, female death rates have been declining faster and the differences are gradually widening. Between 1931 and 1965 the rates for all females dropped by 33.3 p.c. as compared with only 16.2 p.c. for males.

15.—Percentage Change in Death Rates for Each Age Group, 1931 to 1965

35-39 "	-47.6	-72.9			
40-44 "	-35.2	-60.0			
45-49 "	-22.2	-60.0	All Ages.....	-16.2	-33.3

Despite the very considerable reduction that has taken place in infant mortality, more deaths still occur in the first year of life than in any other single year. Of the total deaths occurring in 1931, almost one quarter were of children under five years of age and more than three quarters of those were of children under one year of age; of the deaths occurring in 1965, almost 8 p.c. were of children under five years and of those about 85 p.c. were under one year. Most of the reduction took place among children over the age of one month but there was also a notable decrease in all childhood ages up to five years.

The reductions in the mortality rates in early and middle years of life have had the effect of increasing the number of people in the older age groups and raising the average age at death. In 1931, the average age at death of males was 43.1 years and of females 44.8 years; by 1965 this had advanced to 61.7 years and 65.4 years, respectively. On the other hand, the median age increased during the same period from 50.8 to 68.5 for males, and from 52.1 to 73.4 for females. This means that half of all the females who died during 1965 were over 73.4 years of age, while for males half had reached 68.5 years. Since 1931, the gains in median age were 17.7 years for males and 21.3 for females.

number of annual deaths occurred.

Table 17 indicates the variations from province to province in average and median ages at death; these, in turn, are dependent in large measure on the age distribution of the population as well as on varying mortality rates at each age. For example, in Newfoundland a high mortality rate among infants and young children reduces the average and median age for that province, but the reverse is the case in British Columbia and several other provinces with older populations.

Deaths in Urban Centres.—Table 2, pp. 252-254, shows the numbers of deaths in urban centres of 20,000 population or over in 1965 and the average numbers for the period 1956-60; death rates for urban centres cannot be computed for these years since their populations are not known for intercensal periods.

Causes of Death.—Table 18 summarizes the most recent figures for deaths and death rates in Canada grouped according to the International Abbreviated List of 50 Causes. Over 80 p.c. of the deaths are caused by diseases of the heart and arteries, cancer, accidents, diseases of early infancy, the respiratory diseases, and nephritis. Because of the rise in the average age at death during the past thirty years, the proportion of deaths from causes that affect older people has increased. Cancer and diseases of the cardiovascular-renal systems now account for a larger proportion of all deaths. By the same token, deaths from causes that affect mainly children and young adults have declined.

Accidents have displaced infectious diseases in recent years as one of the major killers. Table 19 shows clearly that accidents are, by far, the leading cause of death among males from age one to 44 and one of the five major causes above that age. Although less predominant among females, accidents are also one of the leading causes of female death beyond the first year of life.

Subsection 2.—Infant Mortality

Table 1, pp. 250-251, and Table 20 show the striking improvement that has taken place in the rate of infant mortality during the past twenty years. Although 68,142 of the 2,670,380 children born in the six years 1961-66 died before reaching their first birthday, 182,607 others lived who *would have died* at the infant mortality rate prevailing in the period 1926-30. This improvement is attributable to many factors—the higher proportion of births taking place in hospital or under proper prenatal and postnatal care, better supervision of water supplies, improved sanitation, pasteurization of milk, the use of antibiotics, improved home environment as a result of higher living standards and, in recent years, the generally lower age of mothers.

The variations that exist in infant mortality rates from province to province and from one locality to another may be explained by differences in the extent to which these factors apply provincially or locally. Among the provinces, the 1966 male infant mortality rates ranged from a low of 22.8 to a high of 32.8, compared with the national average of 25.8—the latter including the very high rate among the Northwest Territories aboriginal population. Female rates ranged from 17.3 to 23.2, compared with the national rate of 20.2. Although the national and provincial rates for both sexes have been declining steadily for some years, for some unknown reason there were recently a number of reversals in provincial rates.

Table 20 shows that mortality among male infants is 25 p.c. to 30 p.c. higher than that among female infants for Canada, with wider variations for the individual provinces. For the country as a whole, out of every 1,000 infant boys born alive in 1966, 26 died before reaching their first birthday, whereas out of every 1,000 infant girls born alive, 20 died within one year. As already pointed out, there are on the average 1,056 males born to every 1,000 females but, because male infant mortality is higher, the excess of males is reduced greatly by the end of the first year. For example, in 1961-66 there were 1,370,835 male children born compared with 1,299,545 female children, an excess of 71,290 or 5.5 p.c.; in the same period, 39,135 male children died during their first year compared with 29,007 female children so that the excess of males at one year of age was reduced to 61,162 or 4.8 p.c.

(PERCENTAGES OF TOTAL INFANT AND TOTAL NEONATAL DEATHS)

Infant Mortality in Urban Centres.—Because of the relatively small numbers of infant deaths in individual cities and towns, the rates for these centres usually vary widely from year to year. As is evident from Table 2, pp. 252-254, many cities and towns have maintained consistently low rates as compared with the national rate or the rate for the province in which they are situated.

Causes of Infant Deaths.—In 1965 almost 70 p.c. of the infant deaths were caused by immaturity, congenital malformations, pneumonia, postnatal asphyxia and atelectasis, and injury at birth. Immaturity was the underlying cause of 1,827 and was an added complication in 2,441 others. Congenital malformations accounted for 1,821 fatalities, pneumonia for 1,117, postnatal asphyxia for 1,083 and injury at birth for 996. Rates for all of these causes remained constant or decreased in 1965.

Neonatal Mortality.—Deaths occurring within the first four weeks of birth are conventionally referred to as 'neonatal' deaths. Table 22 shows that about 70 p.c. of all infant deaths occur in this hazardous neonatal period and, as would be expected, are caused mainly by conditions associated with pregnancy or delivery. Table 23 gives numbers and rates of neonatal deaths for 1941-66 and the chart on p. 274 compares the major causes of such deaths with all infant deaths from the same causes.

¹ Prior to 1951, includes deaths under one calendar month of age; since 1951, includes deaths under 28 days.

Perinatal Mortality.—'Perinatal' mortality—the combined total of stillbirths and deaths of live-born infants occurring 'around' the natal period—is a relatively new vital statistics concept. Since such deaths frequently have the same underlying causes, associated with pregnancy or delivery, regardless of whether they occur before or after delivery, perinatal deaths are generally considered as including the combined total of stillbirths occurring after at least 28 weeks pregnancy and deaths of live-born infants who fail to survive the first week of life.

In 1965 there were 10,992 such 'deaths', of which 4,847 were stillborn and 6,145 live-born but failed to survive one week, with a national rate of 26.0 such deaths for every 1,000 total deliveries. This perinatal rate has declined slowly but steadily from 65.2 in 1921 to 26.0 in 1965.

Subsection 3.—Maternal Mortality

As indicated in Table 1, pp. 250-251, the number of mothers who die in pregnancy and childbirth has been greatly reduced during the past two decades, reaching an all-time low of 135 in 1965. Since 1951 the rate of maternal mortality per 10,000 births has been under 10 and since 1959 it has been under five. Despite this improvement, Canada's maternal death rate (3.2 in 1965) is higher than those for several other countries (see p. 290). Mortality among unmarried mothers is higher than among married mothers.

Causes of Maternal Deaths.—Table 24 shows the main causes of maternal deaths during the years 1963-65.

24.—Maternal Mortality and Rates per 100,000 Live Births, by Cause, 1963-65

687-689	Other.....	10	12	7	2	3	2
	Totals, All Puerperal Causes.....	165	137	135	35	30	32

Of the 135 maternal deaths in the latest year, 42 resulted from complications arising during pregnancy, about half of these from some type of toxæmia; 43 resulted from a complication of delivery, 36 from a post-delivery complication and 14 from abortive delivery.

Age at Death.—Table 25 shows the distribution of maternal deaths by age group; the average age at death is about four years higher than the average age of all mothers at the time of childbirth. Although death rates for all age groups of mothers have been declining, there have been rather significant changes in the rates. Formerly, the rate for mothers in the age group 30-34 was twice or three times as high as the rate for the 20-24 group, but recently mortality rates for the four age groups of mothers under 35 years of age have not been far apart, although after age 35 a sharp rise occurs.

Section 4.—Natural Increase*

The excess of births over deaths, commonly referred to as natural increase, is a very important factor in the growth of a population. Although the collection of Canadian birth and death statistics began only in 1921, some idea of the rate of natural increase in the early Canadian population may be learned from the estimates shown at the beginning of Sections 2 and 3, which resulted in the following natural increase rates:—

Intercensal Period	Estimated Average Annual Natural Increase Rate (per 1,000 Population)	Intercensal Period	Estimated Average Annual Natural Increase Rate (per 1,000 Population)
1851-61.....	23	1891-1901.....	14
1861-71.....	19	1901-11.....	18
1871-81.....	18	1911-21.....	16
1881-91.....	16		

Because of the combination of high birth rates and declining death rates—despite the fact that death rates were still relatively high—the annual rate of natural increase during the late 1800s and early 1900s varied between 14 and 23; in other terms, the population increased at the rate of 1.5 p.c. to 2.5 p.c. each year by natural increase alone, regardless of any increase attributable to immigration. During the 1920s and early 1930s the birth rate declined more than the death rate and the natural increase rate dropped to a record low of 9.7 in 1937. But higher birth rates during and after World War II and a gradually declining death rate caused the natural increase rate to rise steadily from 10.9 in 1939 to a record 20.3 in 1954. Although after that year there has been a steady drop because of declining birth rates, the natural increase rate in 1966 was still high at 11.9.

Table 1, pp. 250-251, gives average rates of natural increase in the provinces for five-year periods 1941-65 and Table 26 gives the provincial figures for males and females separately for 1941, 1951, 1961 and 1964-66. High birth rates and declining death rates have given Newfoundland, Alberta and New Brunswick the highest rates of natural increase in Canada in recent years (excluding the Yukon and Northwest Territories).

* For international comparisons, see Section 7, pp. 289-290.

¹ Excludes Newfoundland and the Yukon and Northwest Territories.

The rates of natural increase are higher for females than for males in all provinces because of the higher death rates for males. In the western provinces particularly, the ratio of males to females in the total population is higher than in other parts of Canada and this in itself tends to lower the rate of natural increase. In Canada, a country with a fairly young population and where immigration has been on a large scale, an excess of males is to be expected but the higher rate of natural increase for females may gradually reduce this excess. The trend is toward an eventual excess of females in the total population—as there now is in most European countries—unless immigration again raises the male ratio or death rates among males are greatly reduced.

Natural Increase in Urban Centres.—The classification of births and deaths by place of residence makes it possible to compile the natural increase in the population of urban centres; the figures for centres of over 20,000 population are presented in Table 2, pp. 252-254.

Section 5.—Marriages and Divorces

Subsection 1.—Marriages*

In 1966 Canada's crude marriage rate was 7.8 per 1,000 population. Provincial rates in 1966 varied from 6.9 per 1,000 population for Prince Edward Island to 8.4 for New Brunswick.

Table 27 gives the number of marriages and the marriage rates for Canada and the provinces for 1941, 1951, 1961 and 1964-66, together with percentages of brides and bridegrooms according to place of birth. For the country as a whole, over 83 p.c. of the bridegrooms of 1966 were born in Canada and over 68 p.c. in the province in which they were married; 86 p.c. of the brides were born in Canada and 74 p.c. in the province in which they were married. During the postwar years until 1959 an increasing number of marriages were of persons born outside the country, because of the heavy immigration of young persons. However, since 1959 the proportion of foreign-born bridegrooms declined from 19.6 to 17.0 p.c. in 1966 and the proportion of foreign-born brides from 15.9 to 14.0 p.c. There are wide variations in the pattern of intermarriage of foreign-born and native-born persons as between provinces; in the older Atlantic Provinces and in Quebec there is a greater tendency than in the other provinces to marry native Canadians and in these areas both partners are often born in the same province.

* For international comparisons, see Section 7, pp. 289-290.

¹ Newfoundland included from 1951 and the Yukon and Northwest Territories from 1961.

Age and Marital Status of Brides and Bridegrooms.—Table 28 shows that 91.1 p.c. of the brides and 91.5 p.c. of the grooms in 1965 had never previously married, and that 4.6 p.c. of the brides and 4.1 p.c. of the bridegrooms had been widowed. The average age at marriage of bachelors was 25.3 years and that of spinsters 22.6 years. The average age of widowers and widows at time of remarriage was slightly more than double that of bachelors and spinsters.

Religious Denominations of Brides and Bridegrooms.—The distribution of brides and bridegrooms by religious denominations is roughly the same as that for the population as a whole. Table 29 shows the very strong influence that religion has on marriage. Nearly 69 p.c. of all marriages are between persons of the same religious denomination; in 1965 among those of Jewish faith it was about 90 p.c.; among Roman Catholics about 86 p.c.; United Church about 57 p.c.; and Eastern Orthodox about 68 p.c.

¹ Includes Greek Catholic denomination.

² Percentage of marriages between contracting parties of the same religious

Subsection 2.—Divorces

Before World War I the number of divorces granted in Canada represented less than one per 1,000 of the yearly number of marriages. After that War, however, there was a definite upward trend; the number advanced to 8,213 in 1947, declined gradually to a postwar low of 5,270 in 1951 and since then has again moved sharply upward; the 1966 preliminary figure of 10,215 was the highest on record.

30.—Dissolutions of Marriage (Divorces), by Province, 1941-66

NOTE.—Figures for individual years from 1900 to 1953 are given in the 1956 Year Book, p. 230, and for 1954-63 in the 1965 edition, pp. 263-264.

Section 6.—Canadian Life Tables

Five official series of life tables for Canada and the provinces and regions have been published to date, based on deaths in the three-year period around each of the Censuses of 1931, 1941, 1951, 1956 and 1961. The life table values for 1961 are given in abbreviated form in Table 31.

Life tables give some measure of the health and general conditions of survival of an 'artificial' population in a conventional, standard form. A hypothetical number (100,000) of births of each sex is assumed as a starting point. The life tables show how, on the basis of the mortality rates at each age in the given years, these 100,000 of each sex are reduced in number by death. For example, during the year 1961, of 100,000 males born, 3,058 would have died in their first year, according to the mortality rates in effect during the period 1960-62, so that 96,942 would survive to one year of age; 179 would have died in their second year so that 96,763 survived to two years of age, and so on. At 100 years of age only 105 of the original 100,000 would have survived. The probability of death at each age is the ratio between the number of deaths and the population at each age. Finally, the expectation of life is the number of years which a person on the average might expect to live if the mortality rates in the given years remained constant throughout his lifetime.

Mortality rates at all ages for males have been almost consistently higher than for females. Males have the highest risk of mortality as compared with females during their first year of life, from their late teens to early 30s and from age 50 to 65. For both boys and girls the risk of mortality drops rapidly during childhood and is lowest at about age 10, increases gradually to about age 40 for males and about 50 for females and then rises steeply with advancing age. As an illustration of the information available from study of the life tables, it may be observed that at the mortality rates given in the 1961 life table (see Table 31) about 12,100 males would have died before reaching age 50 as compared with about 7,600 females; only 57,517 of the original group of 100,000 males would have survived to age 70 as compared with 72,746 females.

By 1961, life expectancy *at birth* in Canada had reached a new high point of 68.4 years for males and about 74.2 for females—comparable to the expectancy for other countries of the world with highly developed programs of medical and public health care. Once a child has passed its first year of life, however, its life expectancy increases appreciably. At one year of age a male child *at present mortality risks* may, on the average, expect to live an additional 69.5 years and a female almost 75 years, representing for an infant boy a gain of 1.2 years over his expectation at birth and for an infant girl a gain of 0.8 years. The expectation of life of a 15-year-old boy is 56.2 additional years; of a 15-year-old girl 61.5 years. At 25 years of age the expectation is about 46.9 years for men and 51.8 years for women and at age 70, 10.7 years for men and 12.6 years for women.

Table 32 summarizes the life expectancy figures extracted from the Canadian life tables for 1931, 1941, 1951, 1956 and 1961. According to these figures, life expectancy at birth for men increased about three quarters of a year between 1956 and 1961 and 1.3 years between 1951 and 1956, compared with 3.4 years from 1941 to 1951 and 2.9 years from 1931 to 1941; females gained one and one quarter years between 1956 and 1961 and 2.1 years between 1951 and 1956, compared with 4.5 years and 4.2 years, respectively, in the preceding decades. Thus, from 1931 to 1961 a total of 8.4 years was added to male life expectancy and 12.1 years to female longevity.

The increases in life expectancy have been predominantly at the younger ages, particularly in infancy, and diminish with advanced age. For example, from 1931 to 1961, 3.5 years were added to the life expectancy of a five-year-old male, 2.5 years to a 20-year-old, about one year to a 40-year-old and about half a year to a 60-year-old as compared with 8.4 years for a newborn male. During this period, life expectancy for a five-year-old female gained 8.1 years, for a 20-year-old 6.9 years, for a 40-year-old 4.4 years and for a 60-year-old two and three quarter years as compared with 12.1 years for a newborn female.

Longevity improved for both sexes, though more so and at all ages for females, but there was only slight improvement for males beyond middle life. Briefly, the rapid decline in the death rate for infants of both sexes is continuing but the declines are slower with advancing age, so that relatively stationary death rates were established from about 50 years onward for males and from about 80 years onward for females.

The fact that such a pattern exists is important in interpreting the results of these life tables. The arbitrary population base of 100,000 of each sex in the 1956 tables, for example, was subjected to the mortality rates in effect in 1960-62, and the life expectancy computed *as if those death rates at each age were to prevail during their lifetime*. Actually the theoretical 200,000 infants born in 1960-62 will most probably have a pattern of survival and life expectancy quite different from that of the present life tables as they will spend most of their lives under conditions of public health and medical care which in all likelihood will be superior to those prevailing in 1960-62.

The improvement in life expectancy, particularly among children and adolescents, was caused mainly by the substantial reduction in recent years in mortality from infectious diseases; on the other hand, diseases associated with middle and old age are much less amenable to control. It is therefore unlikely that improvement in life expectancy in the future will be comparable to that of the past 30 years. As approximately 9 p.c. of deaths in 1960-62 occurred among infants and another 77 p.c. among persons over age 50, any additional improvement must come as the result of further declines in mortality from conditions associated with childbirth and early infancy, further control of infectious diseases, prevention of accidents, and advances in combating diseases associated with middle and old age, such as cardiovascular-renal conditions and cancer.

Table 33 shows provincial or regional life expectancy for males and females at selected ages. According to the 1961 figures, male life expectancy at birth continues to be below 70 and that for females above 72 in all of the five regions. During the period 1931-61, life expectancy at birth for males increased from 60.00 to 68.35, or 8.35 years, varying from 6.32 years for the Prairie Provinces to 11.09 years for Quebec; life expectancy at birth for females rose from 62.10 to 74.17, or 12.07 years, varying from 10.08 years for British Columbia to 14.97 years for Quebec. Quebec showed the greatest improvement of any region among young males and females and middle-aged females, and British Columbia recorded the greatest improvement among middle-aged males.

Section 7.—International Comparisons of Vital Statistics

Table 34 gives a summary of Canada's national and provincial vital statistics rates along with those of several other countries. It will be noted that among the countries listed the low crude death rate in Canada is bettered by three countries—Japan, Venezuela and Union of Soviet Socialist Republics—and that some of the provinces have lower rates than most other countries. The birth rate also helps to give Canada one of the fastest growing populations, currently ranking tenth among those listed. However, 12 countries reported lower rates of infant mortality, some as low as 14 per 1,000 live births (Sweden and Netherlands), as compared with Canada's rate of 23.6.

34.—Principal Vital Statistics Rates of Selected Countries, 1965

NOTE.—Countries are ranked according to the highest rates for births, marriages and natural increase and according to the lowest for deaths.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. xvi of this volume.

Canada's growth in recent years has intensified many problems in the planning of health and welfare services and has shifted the emphasis toward new approaches and new programs. General prosperity, growing urbanization and industrialization, larger numbers of children and older persons in the population, and new concepts and knowledge in health and welfare matters have all contributed to needs for additional services. Several important developments in health and social welfare took place in Canada during 1966-67.

* Except where otherwise indicated, this Chapter was prepared (August 1967) by the Research and Statistics Directorate of the Department of National Health and Welfare, Ottawa.

The first Canadian Conference on Aging, sponsored by the Canadian Welfare Council in Toronto in January 1966, sought ways and means of improving the life of older people. Delegates represented labour, management, professional organizations, voluntary organizations and the churches. The report of the Special Committee of the Senate on Aging, released in February 1966, recommended a guaranteed income for older people, improvements in housing, health and institutional care, social services, community participation, recreation programs, and the establishment of a national commission on aging.

The Canada Pension Plan Act (SC 1964-65, c. 51) became operative on Jan. 1, 1966, establishing for the first time in Canada a comprehensive social insurance program of contributory, old age, disability and survivors' pensions (see pp. 326-329). The Quebec Pension Plan came into operation on the same date. (The Canada Pension Plan does not operate in Quebec because the legislation provides that the plan will not be operative in a province that establishes its own comparable program.) The Canada and Quebec Plans are almost identical and are to be so closely co-ordinated that a person may contribute under one Plan or the other, or to both Plans interchangeably, during his contributory period and receive the same benefits as if he had contributed to one Plan throughout this period.

The enactment of the Canada and Quebec Pension Plans emphasized the need for uniform private pension legislation across Canada. Quebec enacted the Supplemental Pension Plans Act with effect from July 15, 1965; the Ontario Pension Benefits Act was amended with effect from July 30, 1965; the Alberta Pension Benefits Act came into force on Jan. 1, 1967; and that of Saskatchewan was assented to on Apr. 1, 1967. The Pension Benefits Standards Act of Canada, relating to persons employed in works, undertakings and businesses (generally, banks and interprovincial transportation and communication services) under federal jurisdiction, was assented to on Mar. 23, 1967. All these Acts regulate private pension plans, ensure portability and solvency of the private plans, and require the provision of information to their members.

An amendment to the federal Agricultural Rehabilitation and Development Act (ARDA), assented to on May 12, 1966, renamed it the Agricultural and Rural Development Act and widened its scope correspondingly. This Act has important implications for welfare, in that its goals include "the development of income and employment opportunities" and "the improvement of standards of living". Related to ARDA is the Fund for Rural Economic Development Act, assented to on July 11, 1966, which provides funds for projects designed to develop particular areas under agreement with the provinces concerned. The amount of the Fund, originally \$50,000,000, was increased to \$300,000,000 by an amendment assented to on Mar. 10, 1967. (See Chapter X.)

The Canada Assistance Plan, assented to on July 15, 1966, provides for a comprehensive welfare system to replace the programs for specific categories, such as old age assistance, blind and disabled persons' allowances, and unemployment assistance. It extends previous social assistance and welfare coverage and substitutes a needs test for a test of means as a qualification for assistance. Provincial programs for persons in need, including health care services, will be supported by federal-provincial cost-sharing arrangements (see pp. 332-333).

The federal Medical Care Act, which provides for the setting up of a comprehensive medical care insurance program, was assented to on Dec. 21, 1966, to come into effect not later than July 1, 1968. There are three voluntary provincial plans in operation involving subsidization of premiums for low-income groups: the Alberta Health Plan (an extension of the former Alberta Medical Plan) began paying benefits on July 1, 1965; the British Columbia Medical Plan took effect on Sept. 1, 1965; and the Ontario Medical Services Insurance Plan took effect on July 1, 1966. (See pp. 308-310.)

The Health Resources Fund Act, given Royal Assent on July 11, 1966, provides \$500,000,000 over the period 1966-80 to assist provinces in the acquisition, construction and renovation of health training facilities and research institutions (see p. 294).

An amendment to the federal Old Age Security Act, effective Jan. 1, 1967, provides guaranteed income supplements to recipients of Old Age Security who have little or no other income. The maximum amount of the supplement is \$30 a month (see pp. 329-330).

PART I.—PUBLIC HEALTH

Provincial governments bear the major responsibility for health services in Canada, with the municipality often assuming considerable authority over matters delegated to it by provincial legislation. The Federal Government has jurisdiction over a number of health matters of a national character and provides important financial assistance to provincial health and hospital services. All levels of government are aided and supported by a network of voluntary agencies working in different health fields.

Section 1.—Federal Health Activities

The Department of National Health and Welfare is the chief federal agency in health matters but important treatment programs are also administered by the Departments of Veterans Affairs and National Defence. The Dominion Bureau of Statistics is responsible for collection, analysis and publication of national health statistics, the Medical Research Council and the Defence Research Board administer medical research programs, and the Canada Department of Agriculture has certain health responsibilities connected with food production.

The Department of National Health and Welfare controls food and drugs, including narcotics, operates quarantine and immigration medical services, carries out international health obligations, and provides health services to Indians, Eskimos and other special groups. It advises on the visual eligibility of applicants for blindness allowances and co-operates with the provinces in the provision of surgical or remedial treatment for recipients of the allowances. Under the Public Works Health Act, supervision of health conditions is provided for persons employed on federal public works. Health counselling and medical supervision are provided for the federal Public Service. The Department also administers the civil aviation medical program for the Department of Transport.

The Department serves the provinces in an advisory and co-ordinating capacity and administers grants to provincial health and national voluntary agencies. Administration of federal aspects of the Health Resources Fund and the Hospital Insurance and National Health Grant Programs is a major activity. Co-ordination with the provinces on health matters is facilitated by the Dominion Council of Health, the principal advisory agency to the Minister of National Health and Welfare. Its membership includes the Deputy Minister of National Health, who acts as chairman, the chief health officer of each province, and five appointees of the Governor in Council. The Council meets semi-annually. Federal-provincial technical advisory committees of the Council deal with specific aspects of public health.

Subsection 1.—Medical Care and the Health Resources Fund

Public Medical Care.—The Medical Care Act was passed by the Canadian Parliament in December 1966 and is to become operative not later than July 1, 1968. The provisions of this statute are based on principles outlined by the Prime Minister in July 1965, when he announced the intention of the government to make available to the provinces federal financial contributions for provincially administered medical care programs.

In accordance with the terms of the Medical Care Act, the federal government contributes to any participating province half the per capita cost of all insured services furnished under the plans of all participating provinces multiplied by the number of insured persons in that one province. In order to benefit from this federal contribution, a provincial plan must meet the following criteria:—

- (1) the plan must be operated on a non-profit basis by a public authority set up by the provincial government, and subject in respect of its accounts and financial transactions to provincial audit;
- (2) the plan must make available on uniform terms and conditions to all insurable residents of the province, insured services, which are defined as all medically necessary services rendered by medical practitioners, for whom the provincial law must provide reasonable compensation so as to ensure reasonable access to insured services by insured persons;
- (3) the plan must give entitlement to not less than 90 p.c. of the total number of eligible residents of the province during the first two years and not less than 95 p.c. thereafter;
- (4) for persons normally resident in Canada, the plan does not impose any minimum period of residence, although a waiting period of up to three months for entitlement within a province is permissible if 'portability' is provided for, so that persons retain coverage when temporarily absent from the province or during any waiting period, of not more than three months, for benefits in another province on change of residence.

In addition to the comprehensive physicians' services which must be provided as insured services by participating provinces, the Medical Care Act empowers the government to include any additional health services under terms and conditions that may be specified by the Governor in Council. All insured services must be provided without exclusion because of age, ability to pay or other circumstances.

The Canada Assistance Plan (see pp. 332-333) provides for federal contributions of half the costs of health care services (as well as income maintenance) that provinces make available to persons establishing eligibility on the basis of financial need.

Health Resources Fund.—Supplementing the medical care program is the Health Resources Fund, which supports the construction of research establishments, teaching hospitals, medical schools and training facilities for nurses and other professionals in the field of health care. The Health Resources Fund Act was enacted in July 1966 and supporting regulations were passed in February 1967. The Fund contains \$500,000,000 to be appropriated during the 15-year period 1966-80, out of which the Government of Canada will pay up to one half the costs of construction, acquisition, renovation and basic equipment for training and research facilities, including the costs of planning but excluding the costs of land, interest and lodgings. Of the \$500,000,000, \$300,000,000 is to be distributed among the provinces in proportion to their population and \$25,000,000 goes to the Atlantic Provinces for joint projects; the remaining \$175,000,000 is yet to be allocated by the Federal Government. During the year ended Mar. 31, 1967, the first year of the operation of the Act, four projects were approved, for which the contribution under the Act was \$15,000,000.

Subsection 2.—National Health Grant Program

The National Health Grant Program, inaugurated in 1948, makes federal grants available to the provinces for the developing and strengthening of public health and hospital services. Changes have been made over the years to provide additional funds, increase flexibility and meet changing circumstances. Table 1 shows the changes in the grants structure and the present arrangement under nine continuing grants as follows: Professional Training, Hospital Construction, Mental Health, Tuberculosis Control, Public Health Research, General Public Health, Cancer Control, Medical Rehabilitation and Crippled Children, and Child and Maternal Health. During the period 1948-66, the total grant expenditure was \$662,580,518, representing 80 p.c. of the funds available, with the expenditure pattern showing a higher-than-average percentage of utilization in the later years of this period.

The largest single grant has been directed to hospital construction. Up to Mar. 31, 1967, assistance for construction of hospital beds and auxiliary accommodation had been approved for 125,898 hospital beds and 15,636 bassinets, 24,012 beds for nurses and 919 beds for interns. Continuing federal expenditure under the General Public Health Grant, the second largest grant, has assisted the provinces in maintaining and extending surveillance by local health personnel across the country against epidemiological and environmental health hazards. Since 1948 more than 46,000 health and hospital personnel have received grant funds for special training and in 1966-67 alone more than 6,000 health workers were employed with grant assistance. Other grants are designated for specific areas of service, such as the prevention and treatment of mental health and tuberculosis, cancer control, reduction of infant mortality and improvement of maternity, infant and child care, medical rehabilitation and prevention and treatment of crippling conditions in children and adults.

1.—Amounts Available and Amounts and Percentages Expended under the National Health Grant Program, by Grant, for the Eighteen-Year Period Ended Mar. 31, 1966, and for the Year Ended Mar. 31, 1967.

¹ Amounts available as set out in the Orders in Council and amounts expended for all types of grants to all provinces.

² Figures for the year ended Mar. 31, 1967 apply to grant allocations and payments for Public Health Research and Hospital Construction in all provinces but exclude the respective amounts under all other types of grants that apply to the Province of Quebec; \$10,113,679 in amounts available to Quebec and an estimated expenditure of \$9,600,000 representing Quebec's share through tax rebate under the Established Programs (Interim Arrangements) Act are therefore not included. Distribution by grant of the 1966-67 payment made to Quebec will be available for inclusion in the next succeeding edition of the Year Book. Expenditures may exceed 100 p.c. of amounts available through transfer of unexpended funds from one grant to another or, in the case of the Hospital Construction Grant, through revote of funds unused in previous years.

³ Merged with Medical Rehabilitation Grant, Apr. 1, 1960.

⁴ Absorbed into General Public Health Grant, Apr. 1, 1960.

⁵ Lapsed in 1953 following the completion of provincial health surveys.

⁶ Introduced in 1953 and absorbed into General Public Health Grant, Apr. 1, 1960.

⁷ Introduced in 1953 and merged with Crippled Children Grant, Apr. 1, 1960.

⁸ Amounts for 1960-66 only; see footnotes ³ and ⁷.

⁹ Introduced in 1953.

Emphasis is changing in the research that is being assisted by grant. Since September 1966, approval of grant support under the Public Health Research Grant requires that the projects show a direct relationship to one of the following aspects of public health: prevention of disease or disability, operational or administrative studies to improve health services, epidemiological studies, or environmental health. Most research in medical sciences and in the clinical fields is therefore excluded from the Public Health Research Grant unless it bears some special relationship to the four areas mentioned. A consolidated account of medical and public health research is given on pp. 302-303.

Subsection 3.—Hospital Insurance

Provincial hospital insurance programs, operating in all provinces and territories since 1961, cover 99 p.c. of the population of Canada. The programs were introduced under the Hospital Insurance and Diagnostic Services Act of 1957, by which the Government of Canada shares with the provinces the cost of providing specified hospital services to insured patients. Specifically excluded are tuberculosis hospitals and sanatoria, hospitals or institutions for the mentally ill, as well as institutions, the purpose of which is the provision of custodial care, such as nursing homes and homes for the aged. The methods of administering and financing the program in each province and the provision of services above the stipulated minimum that is required by the Act are left to the choice of the province.

Insured in-patient services must include accommodation, meals, necessary nursing service, diagnostic procedures, pharmaceuticals, the use of operating rooms, case rooms, anaesthetic facilities, and the use of radiotherapy and physiotherapy if available. Similar out-patient services may be included in provincial plans and authorized for contribution under the Act. All provinces include some out-patient services. The provincial plans are administered by the provincial department of health in some provinces and by a separate commission in others. To finance the insurance plans, the provinces use general revenue, sales taxes and premiums in various combinations.* The Government of Canada contributes, out of the consolidated revenue fund in respect to each province, 25 p.c. of the per capita cost of in-patient services in Canada and 25 p.c. of the per capita cost of in-patient services in the province, which is then multiplied by the average number of insured people in that province. Thus, the total contribution is about 50 p.c. of the shareable cost for all Canada, but the proportion is higher for provinces where the per capita cost is below average and lower for the other provinces. Contributions for insured out-patient services with respect to each province are paid in the same proportion as the contributions to the cost for in-patients.

During 1966, the Government of Canada made the following payments, totalling \$372,700,000: Newfoundland \$12,400,000; Prince Edward Island \$2,600,000; Nova Scotia \$19,300,000; New Brunswick \$15,600,000; Ontario \$185,000,000; Manitoba \$24,600,000; Saskatchewan \$27,100,000; Alberta \$40,400,000; British Columbia \$44,600,000; Yukon Territory \$400,000; and Northwest Territories \$700,000.†

Tables 2 and 3 show data for the hospitals that are listed in hospital insurance agreements for the year 1965. The 1,277 reporting hospitals had a total of 134,619 beds set up at the end of the year or 6.9 beds per 1,000 population. The rate of patient-days per 1,000 population in 1965 was 2,023 for Canada and ranged from 1,501 in Newfoundland to 2,355 in Saskatchewan and 2,521 in the Northwest Territories.

Table 4 shows the expenditures of budget review hospitals. They exclude capital costs, but include expenditures for services that are not covered by hospital insurance plans. The expenditures increased by 13 p.c. over the preceding year to \$1,109,000,000, of which salaries accounted for two thirds. Although budget review hospitals provided only about 88 p.c. of all insured services, the table shows also the per capita amount of their expenditures. This varies greatly between provinces, mainly on account of differences in hospital utilization (patient-days per person per year) and of the amount of care for chronic patients that these hospitals provide.

* Newfoundland, Prince Edward Island, New Brunswick, Quebec and Yukon Territory use general revenue only; Alberta, British Columbia and the Northwest Territories use general revenue and a daily charge at the time of service; Nova Scotia uses general revenue and sales tax; Saskatchewan uses general revenue, premiums and sales tax; and Ontario and Manitoba use general revenue and premiums.

† On Jan. 1, 1965, contributions to Quebec under the Hospital Insurance and Diagnostic Services Act were discontinued and replaced by arrangements under the Established Programs (Interim Arrangements) Act.

Subsection 4.—Food and Drug Control

The provisions of the Food and Drugs Act, administered by the Food and Drug Directorate of the Department of National Health and Welfare, apply to the manufacture, advertising, packaging and sale of foods, drugs, cosmetics and medical devices anywhere in Canada. Wide powers are authorized under this legislation to maintain the safety, purity and quality of food and drug products and to prevent misrepresentation in labelling and advertising. There are prohibitions, for example, on the sale of food or drugs that

do not meet prescribed standards, are harmful, adulterated, dirty, improperly stored, or manufactured under unsanitary conditions. The Act also prohibits the advertising of any food, drug, cosmetic or medical device as a preventive or cure for a number of serious diseases and also lists drugs that may be sold only by prescription.

Standards of safety and purity are maintained through constant and widespread inspection and laboratory research. The inspection of food-manufacturing establishments plays a major role in the production of clean, wholesome foods containing ingredients that meet recognized standards. Changing food technology requires the development of methods of laboratory analysis to ensure the safety of new types of ingredients and packaging materials. The Food and Drug Regulations list chemical additives that may be used in foods, the amounts that may be added to each food and the underlying reason. Considerable emphasis is placed upon studies to ensure that the levels of pesticide residues in foods do not constitute a health hazard. The effect of new packaging and processing techniques on the bacteria associated with food spoilage is also of special concern. Since the Act is intended for the protection of consumers, a section of the Directorate obtains consumer opinions, deals with individual consumer complaints and provides information on which consumers can base opinions.

Detailed information on all new drugs must be reviewed by the Directorate to determine compliance with requirements before release for sale is permitted. Drug regulations set standards for drug manufacturing, facilities and controls, and prescribe additional safeguards in the distribution of investigational and new drugs. Drug manufacturing requirements relate to sanitation of facilities, employment of qualified personnel, testing to ensure standards of quality and safety at stated stages of processing, and maintenance of records of testing performance, together with a system of control to enable a complete and rapid recall of any lot or batch of drugs from the market. The controls over clinical trials and marketing of new drugs require detailed information to be submitted to the Directorate concerning the method of manufacture, the tests applied to establish standards of safety and quality, and substantial evidence of the clinical effectiveness of the new drug for the purposes stated. Samples of the final product must also be submitted. Before carrying out clinical trials, a manufacturer also must file complete data on his experience with the drug including any evidence of adverse side effects, and the qualifications of the persons to be engaged in its investigational use. The Minister may suspend clinical testing based on this evidence if he feels that it is in the public interest to do so; in such case the manufacturer has the right to appeal the decision. Drugs expressly prohibited from sale are thalidomide and lysergic acid diethylamide, except under certain conditions as specified in the regulations, whereby sale by a manufacturer to an institution for clinical use or laboratory research by qualified investigators may be approved by the Minister. Any drug that can be classed as a sedative, hypnotic or tranquillizer is listed to be sold only on prescription. The licensing of persons dealing in certain drugs classed as barbiturates and amphetamines is required as well as the keeping of special records and the limitation of their use to medical purposes.

The Food and Drug Directorate administers the Proprietary or Patent Medicine Act, which is concerned with the registration before marketing and the annual licensing of secret-formula medicines sold under proprietary or trade names.

The Directorate conducts an adverse-drug-reaction reporting program in teaching hospitals across Canada to recognize and investigate reactions to drugs. The co-operation of the medical, dental, veterinary and pharmaceutical professions is solicited in advising the Directorate of such reactions in private practice. Close liaison is maintained with the World Health Organization and other authorities in foreign countries for the prompt reporting of such reactions.

Since October 1966, every manufacturer and distributor of drugs in Canada (products registered under the Proprietary or Patent Medicine Act exempt) is required to submit to the Food and Drug Directorate certain information on all products he is marketing in

Canada and each time he intends to market another product, make changes in existing products, or withdraw a product from the market, he must notify the Directorate.

Regulation of the supply and use of narcotic drugs is carried out under the Narcotic Control Act, as revised in 1961. This legislation prescribes a maximum penalty of seven years with no minimum for illegal possession; a maximum penalty of life imprisonment for trafficking; and minimum and maximum penalties of seven years and life imprisonment for illegal export and import. The Royal Canadian Mounted Police and other law-enforcement agencies continue to make every effort to keep the illicit traffic to a minimum.

Subsection 5.—Medical Services

Through its Medical Services Branch, the Department of National Health and Welfare provides several direct and indirect types of medical service, as described in the following paragraphs. "Indirect" services are provided by hiring local services where practicable.

Indians and Eskimos.—Medical and public health services are made available to registered Indians or Eskimos who are not included under provincial arrangements and who are unable to provide for themselves. A large volume of the service in treatment and health education is rendered to patients through 83 Departmental out-patient clinics staffed by medical and other public health personnel. In remote areas, the key facility is frequently the Departmental nursing station, a combined emergency treatment and public health unit having two to four beds under the direction of one or two nurses; 46 of these are operated throughout Canada.

Where practicable, there has been an increasing integration of Indians into provincial and municipal health agencies and the number of hospitals and other facilities provided specifically for them have been reduced accordingly. At present, the Department maintains 15 hospitals at strategic points and co-operates elsewhere with community, mission or company hospitals. Indians are included under all provincial prepaid insurance plans for hospital care and other forms of medical care but in almost all cases the total cost of mental and tuberculosis care is borne directly by the Federal Government. Indian and Eskimo health workers are trained to give instruction in health care and sanitation.

Northern Health.—Because of the special problems in developing health services in the Far North, the Department has been given the responsibility of co-ordinating federal and territorial health care for all residents. In so doing, it undertakes the functions of a health department for the Council of the Northwest Territories and assists the government of the Yukon Territory in the provision of certain health services. Close liaison is maintained with the federal departments directly responsible for administrative matters affecting these areas. Hospital insurance plans are in effect in both territories.

In the Yukon Territory, services for the total population administered through the Commissioner for the Yukon and provided on a cost-sharing basis with the Department of National Health and Welfare include complete treatment for tuberculosis, payment for services rendered at the Alberta cancer clinics, mental hospital care through arrangements with the Province of British Columbia, and medical care for indigent patients. Public health nursing services, measures for control of communicable diseases, and administration of the principal public hospital are primarily the responsibility of the Department.

Similar services are provided in the Northwest Territories. The costs of these services are shared between the respective territorial government and the Departments of National Health and Welfare and Indian Affairs and Northern Development.

Sick Mariners.—The Department provides compulsory prepaid medical, surgical, hospital and other treatment services to crew members of all foreign-going ships arriving in Canada and Canadian coastal vessels in interprovincial trade, and provides medical,

surgical and treatment services on an elective basis to crew members of Canadian fishing and government vessels. (Canadian seamen obtain their hospital care under the provincial hospital insurance plans.)

Quarantine.—Under the Quarantine Act, all vessels, aircraft and other conveyances and their crew and passengers arriving in Canada from foreign countries are inspected by the quarantine officers to detect and correct conditions that could lead to the entry into Canada of such diseases as smallpox, cholera, plague, yellow fever, typhus and relapsing fever. Fully organized quarantine stations are located at all major seaports and airports.

Immigration.—Under the Immigration Act and the Department of National Health and Welfare Act, the Immigration Medical Service conducts in Canada and other countries the medical examination of all applicants for immigration to Canada and also provides treatment for certain classes of persons after arrival in Canada, including immigrants who become ill en route to their destination or while awaiting employment.

Public Service Health Counselling.—Health counselling is offered through Medical Services units to federal employees throughout the country. This service is primarily diagnostic and advisory only but emergency treatment can also be given.

Civil Aviation Medical Inspection Service.—Air pilots and other air personnel are routinely examined for physical and mental fitness for the performance of their duties.

Regulation of Hygienic Standards.—The Department is responsible for regulating hygienic standards on federal property, interprovincial common carriers, Canadian shipping and aircraft.

Coast Guard Medical Service.—The Department provides a medical service for and in conjunction with the Canadian Coast Guard.

Subsection 6.—Radiation Protection

A comprehensive radiation protection program has been developed in Canada in response to the rapidly increasing use of radioactive materials, X-ray equipment, and nuclear reactors in medicine, industry and research, and to the increasing concern about radiation from atmospheric testing of nuclear weapons, from medical X-ray procedures, and from natural radiation sources.

Because of the need for national controls over dealings with uranium and radioactive by-products, the Federal Government has developed regulatory control procedures for the safe handling and use of all radioactive materials. These are implemented through special advisory committees with close collaboration of federal and provincial health departments. Acting as the principal health adviser under the Atomic Energy Control Regulations, the Department of National Health and Welfare reviews all applications for radioisotope licenses and recommends health and safety conditions.

Members of the Department serve on special advisory committees to the Atomic Energy Control Board to review the siting, design, construction and operation of nuclear reactors and charged-particle accelerators and to make recommendations. Although there is no federal regulatory authority to provide health and safety supervision over the use of X-rays, the Department has established a committee on the development of X-ray safety standards to prepare and recommend uniform standards and procedures throughout Canada. The committee has recommended that the sale of such equipment be subject to federal control and its installation to provincial control. Five provinces (Nova Scotia, Quebec, Ontario, Saskatchewan and Alberta) have enacted specific enabling legislation applicable to X-rays and two (Nova Scotia and Saskatchewan) have issued regulations requiring registration of operators and equipment.

The Department provides a number of radiation protection services including external and internal personnel monitoring through its various personnel dosimetry services and its body burden assay service. In addition, it carries out radiation surveys and field studies to assess radiation hazards, serves as the co-ordinator for the federal departments and agencies that are capable of providing specialized assistance in the event of radiation accidents involving possible exposure of members of the public, and provides short-term training courses in radiation protection for persons with varying degrees of responsibility for radiation protection on a day-to-day basis.

The Department operates extensive laboratories for environmental monitoring and research. A nation-wide monitoring program has been developed to assess the exposure of the public to radiation from radioactive fallout from nuclear weapons testing. The Department is assisted in the systematic collection of samples of air, precipitation, soil, wheat, milk and human bone by the federal Departments of Transport and Agriculture and by pathologists in hospitals throughout Canada. Reports of the concentrations of such fallout components as strontium-90 and cesium-137 in these samples are published monthly. Because of a unique food-chain cycle in the Far North, a special study of cesium-137 in that area has been developed. The Department is developing several programs with the objective of meeting the increasing need for better biological data on which to base estimates of radiation dose and is thus improving its capability of providing medical advice concerning the follow-up of persons exposed to ionizing radiation.

Subsection 7.—Health Research and International Health

Health Research.—Health research in Canada is carried on in universities, hospitals, research institutions and government departments. The main sources of financial support are governments, voluntary agencies, charitable foundations, professional bodies and business corporations. In 1962 health research funds amounted to approximately \$10,000,000; by 1966 they were more than \$20,000,000.

The Federal Government conducts intramural medical and dental research within the Department of National Health and Welfare, the Defence Research Board and the Department of Veterans Affairs. The Medical Research Council, the National Research Council, the Department of National Health and Welfare, the Department of National Defence, the Department of Veterans Affairs, the Queen Elizabeth II Fund, and the Smoking and Health Program of the Department of National Health and Welfare have given financial support to extramural research in universities, hospitals and other institutions.

The Medical Research Council, since its formation in 1960, has become the principal federal agency for all medical research except those specialized areas assigned to other agencies including public health, defence and veterans. Primary attention has been given to fundamental research in the basic medical sciences but clinical research is also supported. The Medical Research Council administers most of the federal medical research grants that support full-time investigation by research scientists in Canadian medical schools and their affiliated hospitals. The National Research Council pursues in its broad program many investigations relevant to health. Its Associate Committee on Dental Research administers specific grants for dental research and for training dental-research personnel.

Health research of an applied nature in certain "public health" areas (prevention, epidemiology, environmental and operational) is supported by the Department of National Health and Welfare. Intramural research is conducted by the Food and Drug Directorate, the Medical Services Branch, the Health Insurance and Resources Branch, by several divisions and laboratories of the Health Services Branch and by the Research and Statistics Directorate. The Department's extramural research includes projects relating to smoking and health, public health research, surveys and studies that have been approved by the province prior to receiving assistance under the National Health Grants Program.

The Defence Research Board sponsors both intramural and extramural research on medical problems of defence interest and supports a special unit to conduct research in aviation medicine established at McGill University. The Department of Veterans Affairs maintains a program of medical and dental research in its clinics across Canada dealing mainly with conditions related to aging.

The Queen Elizabeth II Fund for Research in the Diseases of Children, established by the Federal Government in 1959, makes a fixed annual sum available for training researchers and scientists in children's diseases.

The Smoking and Health Research Program was initiated in 1963 as part of an educational and research program on the health hazards of cigarette smoking.

International Health.—Canada actively assists and co-operates with the World Health Organization (WHO) and the other specialized agencies of the United Nations whose programs have a substantial health component or orientation. Capital and technical assistance are provided to developing countries through the Colombo Plan and other bilateral aid programs. Health training is provided for a number of persons coming to Canada each year under the different technical co-operation schemes (see p. 173 and pp. 184-188); during 1966, 133 trainees arrived, bringing the total number of trainees in Canada during the year to 326. These persons were studying in a wide range of health disciplines under the External Aid Program but with greatest concentration in undergraduate medicine and in public health.

Canadian experts in health legislation, health administration, nursing and related areas undertook specific assignments abroad during the year and teachers and specialists in a number of clinical fields were provided in response to requests from the developing countries. Capital assistance, primarily through the provision of cobalt beam therapy units for cancer treatment centres in the Colombo Plan area, was continued. A special feature during the year was the provision of over 600,000 doses of oral polio vaccine for a campaign among children in Saigon, Viet-Nam.

Canada's membership on the Executive Board of UNICEF was renewed at the beginning of 1965. The Deputy Minister of National Welfare, Canada's representative on the Board, was elected Chairman for the period commencing February 1966 through July 1968.

To carry out Canada's obligations under the International Sanitary Conventions, the Department of National Health and Welfare maintains quarantine measures for ships and aircraft entering Canadian ports and provides accommodation and necessary medical care for persons arriving in Canada who require quarantine (see p. 301).

The Department is responsible for the enforcement of regulations governing the handling and shipping of shellfish under the International Shellfish Agreement between Canada and the United States and, at the request of the International Joint Commission, participates in studies connected with control of pollution of boundary waters between Canada and the United States as well as with problems caused by atmospheric pollution. Other international health responsibilities include the custody and distribution of biological, vitamin and hormone standards for WHO and certain duties in connection with the Single Convention on Narcotic Drugs, 1961, as well as Canada's representation on the Narcotic Commission of the United Nations.

Subsection 8.—Consultative and Technical Services and Special Programs

The extension of technical and consultative assistance to the provinces is a function of the Health Services Branch and the Health Insurance and Resources Branch of the Department of National Health and Welfare. The following services supply consultation and information, advise on health care projects, co-ordinate activities and planning, and exercise leadership in promoting high standards of service: Child and Maternal Health; Dental Health; Emergency Health; Epidemiology; Health Education; Laboratory of

Hygiene; Medical Rehabilitation; Mental Health; Nursing Services; Nutrition; Occupational Health; Radiation Protection; Public Health Engineering; Research Development; Health Grants; Health Resources; Hospital Insurance and Diagnostic Services; Health Facilities Design; Medical Care Insurance and Research and Statistics. In addition, the Information Services of the Department produces and distributes a variety of literature, films and radio programs to inform and educate the public on health subjects.

The Department also conducts a number of specialized services to preserve Health that are of national concern. These include: the Emergency Health Services which assist provincial and municipal governments to organize emergency medical, nursing, hospital and public health services; the Laboratory of Hygiene including the Virus Laboratory which serves as the National Typing and Reference Centre; and the Radiation Protection Division which is mainly responsible for safety measures to protect Canadian radiation workers (see p. 300). The Environmental Health Centre carries out advisory and research services in Occupational Health, Aerospace Medicine and Public Health Engineering, which deal with health problems of interprovincial and international traffic and water resources management.

Section 2.—Provincial and Local Health Services

Provincial governments are mainly responsible for the various health measures to preserve the health of individuals and communities. These are administered by the official and voluntary health agencies, hospitals and the teaching and research institutions in co-operation with the health professions. Health services fall into the broad categories of public health, hospital services and medical care programs; in addition to general programs, there are organized services for specific diseases and for the chronically ill and disabled generally.

Although the pattern of services is broadly similar, provincial health legislation, financing and administration vary to some degree. Most health functions are exercised by the provincial health departments but in some provinces certain programs, such as hospital insurance, medical care insurance, tuberculosis control, cancer control or alcoholism programs, may be administered by separate public agencies directly accountable to the Minister of Health. Voluntary organizations also provide specialized health services, often with some support from tax funds in the form of payment for services or support grants.

In general, the provincial health departments carry out over-all planning and direction of public health programs, administer certain specialized health programs, and assist through technical and financial aid the regional or county health units and city health departments that have been delegated responsibility for the basic public health services. In most provinces, the health unit systems, which serve mainly rural areas, are operated either provincially or jointly by the province with the local authority having jurisdiction over county, municipality or larger area, while city health departments are administered by municipal or metropolitan boards of health. Several provincial health departments also directly administer health services to northern unorganized territories. The nucleus staff of a local health unit or department usually is composed of a full-time medical officer of health, a number of public health nurses and a public health inspector.

Local official programs to safeguard community health are concerned with environmental sanitation to ensure safe water, milk and foods; prevention and control of infectious diseases; the improvement of maternal, child and school health; dental health; registration of vital statistics; and health education of the public. In addition, the larger city health departments have developed specialized services in such areas as mental health, home care, and rehabilitation of the chronically ill and handicapped. More recently, a few health units and departments have started health screening for chronic conditions and family planning clinics. The city health departments also participate to some degree with the provincial authorities in accident prevention and in the health aspects of measures to control air, water and soil pollution.

Provincial health departments support the local programs by health grants and the provision of technical consultant services. Most of the mental and tuberculosis hospitals and clinics are provincially operated, as are treatment services for the venereal diseases, cancer, alcoholism and other specific diseases, and the provincial laboratories that aid in diagnostic and control procedures. The provincial agencies are primarily responsible for the collection and analysis of vital statistics and the study of the epidemiological and related social and economic conditions that affect health conditions. They also give leadership in such fields as occupational health, nutrition, health education and pollution problems in collaboration with national health agencies. In order to maintain and improve health services, the provincial health departments recruit and train professional and technical personnel for the health fields and support public health research. Through agreement with the Federal Government, live oral poliovirus vaccine (Sabin) as well as Salk vaccine is made available by provincial health departments for immunization against poliomyelitis.

Maternal and Child Health.—All provincial health departments have established consultant services on maternal and child health; five provinces have separate divisions under medical direction, and nine have public health nursing divisions that work with the local health services in this field. The specialized divisions also undertake studies in maternal and child care, including hospital care, and assist in the training of nursing personnel.

Dental Health.—All provincial health departments have dental health divisions that administer varying programs directed mainly to the training of dentists and dental hygienists in public health, the operation of children's preventive and treatment clinics, and dental health education. In general, dental care is restricted to pre-school and the younger school age groups, although mobile dental clinics are extended to children living in remote areas where no dentist is available. Several provinces have set up, in conjunction with their dental schools, special courses for dental hygienists. A locally sponsored plan in which the cost of dental services for children is shared by the community and the provincial health department is in operation in more than 90 communities in British Columbia.

Nutrition.—Consultants in nutrition extend technical guidance and education to health and welfare agencies and hospitals, and diet counselling to selected patient groups; they also conduct nutritional surveys and other research.

Subsection 1.—Public Health Services

Environmental Health.—The control of factors in the environment that are harmful to health is an expanding area of public health. Much of the work in community sanitation involves inspection duties to maintain safe milk, water and food supplies and sanitary conditions in sewerage and waste disposal systems and in public areas such as campsites and swimming pools. Air pollution, water pollution, radiation exposure and the use of pesticides have become major environmental problems, necessitating the co-operative efforts of governments and other agencies in research and in planning effective control measures. Special water authorities in Ontario and Quebec have responsibility for all aspects of public water supply, sewerage systems and stream pollution, and in six other provinces special water agencies exercise similar functions jointly with the health departments.

Occupational Health.—Services designed to prevent accidents and occupational diseases and to maintain the health of employees are common to provincial health departments, labour departments, workmen's compensation boards and industrial management. Provincial agencies regulate working conditions and offer consultant and educational services to industry. All provinces have legislation (Factory Acts, Shop Acts, Mines

Acts, Workmen's Compensation Acts) setting health safety, standards for employment. Most provinces maintain environmental health laboratories that study industrial health problems such as the effects of noise and air conditions on workers.

Communicable Disease Control.—Five provincial health departments have separate divisions of communicable disease control headed by full-time epidemiologists; in the other provinces these functions are handled by other provincial medical consultants. Local health authorities undertake case-finding and diagnostic services in co-operation with public health laboratories, conduct epidemiological investigations and carry out control measures such as for tuberculosis and venereal disease. All provincial health departments organize immunization programs for the public against diphtheria, tetanus, poliomyelitis, whooping cough and smallpox and, in most provinces, against measles.

Health Education.—A basic concern of provincial health authorities is to stimulate public interest in important health needs, and most provincial health departments have a division or unit of health education directed by a full-time professional "health educator". This division makes available a variety of health education materials and other divisions of the health department, to local health authorities and to voluntary associations. Many educational activities are directed to reducing habits harmful to health, such as cigarette smoking and the excessive use of alcohol and other drugs.

Public Health Laboratories.—All provinces maintain a central public health laboratory and usually a number of branch laboratories to assist local health agencies and the medical profession in the protection of community health and the control of infectious diseases. Public health bacteriology (testing of milk, water and food), diagnostic bacteriology and pathology are the principal functions of the laboratory service, with medical testing for physicians and hospitals steadily increasing in volume. Efforts to co-ordinate public health and hospital laboratory services and measures to bring laboratory facilities to rural areas are among the recent developments.

Subsection 2.—Services for Specific Diseases or Disabilities

Mental Health.—Treatment programs for the mentally ill have centred mainly around three types of facilities: the mental hospital, the psychiatric unit in the general hospital, and the organized community mental health clinic. However, these are becoming increasingly less separate and distinct in their functioning as the mental health movement concerns itself with wider community involvement in the psycho-social problem of mental illness. Treatment is being made more accessible with the continuing expansion of psychiatric services within general hospitals and the opening of several psychiatric hospitals for short-term in-patient therapy, day care, emergencies, and out-patient services. The development of social centres and sheltered workshops to aid the mental patient following his discharge to the community owes much to the volunteer efforts of the Canadian Mental Health Association and the response of individual residents. Mental hospitals continue to emphasize programs of recreational and industrial therapy to activate patients for discharge.

Special centres for the assessment and diagnostic evaluation of mentally retarded and emotionally disturbed children are also being developed. Day-training schools or classes for the trainable retarded, sponsored by local associations of parent groups forming the Canadian Association for Retarded Children, are organized throughout the land and research programs designed to afford better understanding and management of mental retardation problems are being developed and expanded in all provinces.

Most large public mental hospitals care for many types of mental illness. In recent years the status of many long-term chronically ill patients has been under review to determine their need for continued stay. As a result, it has been possible to resettle many patients, who no longer need the services of mental hospitals, in foster or boarding homes

in the community. In Ontario, for example, more than 2,000 mental hospital patients requiring sheltered care have been placed in approved homes for special care and another 1,500, chiefly ambulatory, in approved boarding homes. In Saskatchewan the patient population in the mental hospitals has been reduced by at least 1,000 under a similar program of community placement.

Since 1961, six provinces—Nova Scotia, Ontario, Saskatchewan, Alberta, Manitoba and British Columbia—have replaced their statutes governing the admission and care of the mentally ill with new legislation designed to promote easier and more informal methods of admission and discharge and to establish machinery for periodic review of the status of medically certified patients.

A great part of the cost of care in hospitals for the mentally ill and mentally retarded is borne by the provincial governments, although a charge, according to ability to contribute, may be made in some provinces. Newfoundland and Saskatchewan provide complete free care; Manitoba covers minimum maintenance costs for all patients; in Nova Scotia the provincial hospital gives free care to patients requiring active treatment; and in Ontario all mental-institution treatment is included in the hospital care insurance plan.

Tuberculosis.—The fight against tuberculosis is one of the major programs of all health departments. Free hospitalization and free drug treatment, both on an in-patient and domiciliary basis, are provided. In two provinces extensive BCG programs are in effect and in the other provinces this prophylactic is provided to groups at special risk. Case-finding programs in the form of community tuberculin and X-ray surveys, surveys of high-risk groups, and the follow-up of all arrested tuberculosis cases are routine. These activities resulted in a steady decline in the Canadian tuberculosis death rate to 3.6 per 100,000 population in 1965. Treatment in hospital for tuberculosis patients has also greatly declined with the success of out-patient chemotherapy.

Cancer.—Health departments and lay and professional groups working for the control of cancer have been concerned mainly with four aspects of the problem—diagnosis, treatment, research and public education. In cancer detection and treatment, specialized medicine, hospital services and an expanding public health program are closely related. There are programs operating under health departments in three provinces; four others have provincially supported cancer agencies or commissions; and in the remaining provinces hospital-administered tumour clinics receive provincial support. Under the provincial hospital insurance plans, the benefits pertaining to in-patient care in the treatment of cancer are essentially similar in all provinces and include such special services as diagnostic radiology, laboratory tests and radiotherapy. Similar services for out-patients are covered either by hospital insurance or by federal-provincial cancer control grants. Comprehensive free medical programs for cancer patients are in operation in Saskatchewan and Alberta and for cancer in-patients in New Brunswick.

Venereal Disease.—Free diagnostic and treatment services are available in all provinces but the operation of government clinics is being increasingly superseded by the method of supplying free drugs to private physicians who are reimbursed for treatment of indigents on a fee-for-service basis.

Alcoholism.—Within the past two decades provincially supported programs of varying scope have come into being to prevent and control alcoholism. Some are administered directly by the health departments; others are the responsibility of official or semi-official alcoholism foundations. The first organized and most complete program is that of the Ontario Alcoholism and Drug Addiction Research Foundation whose sphere of activity includes public and professional education, basic and clinical research and the operation of treatment facilities for in-patients and out-patients. Treatment facilities for alcoholic prisoners are being developed by reform institutions in three provinces. Also, the rehabilitation program of various voluntary and religious organizations continues to assist large numbers of alcoholics.

Other Diseases or Disabilities.—Services for persons with chronic disabilities, such as heart disease, arthritis, diabetes, visual and auditory impairments and paraplegia have been developed largely by voluntary agencies assisted by federal and provincial funds. (See pp. 310-311.)

Subsection 3.—Public Medical Care Insurance and Programs

Provincial Medical Care Plans.—Traditionally, patients have paid directly for personal health care services. For the services of physicians, especially, prepaid insurance has been replacing direct payment. Thus, at the end of 1965 about 12,000,000 Canadians or 61 p.c. of the population had some voluntary insurance protection against the cost of physicians' services.

Government financing of personal health care has been increasing in two directions concurrently. First, for the indigent, most provincial governments have assured payments to physicians and several, as well, to dentists, pharmacists for prescribed drugs, optometrists and others. Such programs have operated in several provinces for many years and the remaining provinces have recently made similar provisions. Under the Canada Assistance Plan, the cost of the services can be shared by the Government of Canada. Secondly, for the general population, some provincial governments have introduced programs intended to ensure, if necessary by using tax revenue, that all residents can have physicians' services insurance. In Saskatchewan, coverage is compulsory and no other agency is permitted to compete in the service area covered by the public plan. In British Columbia since 1965 and in Ontario since 1966, public agencies administer optional programs available to individual applicants. In Alberta in 1963 the government established minimum benefits and maximum premiums for existing voluntary insurance plans. In 1967 this arrangement was superseded by a plan similar to those in British Columbia and Ontario. The British Columbia and Alberta schemes cover a comprehensive range of physicians' services and also make provision for paramedical and other health-care benefits to be included as part of the basic contract or as options at a somewhat higher premium cost. As of mid-1967, the publicly administered plans in British Columbia, Alberta and Ontario offered individual contracts only. Private voluntary agencies continued to offer group contracts.

In Newfoundland, the population in the Cottage Hospital Districts (i.e., isolated outlying areas) may enrol in a salaried medical service scheme. (Additionally, all children under 16 years of age throughout the province are covered under the Children's Health Service, at no direct charge to their families, for physicians' services in hospital.)

All these plans except the Children's Health Service in Newfoundland use premiums. To ensure that the premium burden upon individuals is not too heavy, Saskatchewan and Newfoundland cover about three quarters of the total cost from general tax revenues. In Ontario, Alberta and British Columbia premiums of the needy, as defined by a simple test of income adequacy, are subsidized from general tax revenues. British Columbia also uses a special taxation-supported fund to help stabilize premium levels.

Saskatchewan.—Only Saskatchewan has a universal-coverage medical care program. This program, introduced in July 1962, requires enrolment of the entire eligible population. The premiums are compulsory. The maximum for a family is \$24 per year. These premiums cover approximately 25 p.c. of the costs of the program. Among the medical services covered are home, office and hospital visits, surgery, obstetrics, psychiatric care, anaesthesia, laboratory and radiological services, preventive medicine, and certain services provided by dentists. There are no waiting periods for benefits and no exclusions for reasons of age or pre-existing health conditions.

Physicians may elect to receive payment in a number of ways. First, the physician may receive payment of 85 p.c. of the tariffs in the current schedule of fees of the organized

profession, directly from the public administering authority, and accept this payment as payment in full. Secondly, patients and physicians may enrol voluntarily with an "approved health agency" that serves as intermediary, with respect to payment, between the public authority and the physicians; here also, the physician receives 85 p.c. of the tariff as payment in full. Thirdly, a physician may elect to submit his bill directly to the patient who pays him and seeks reimbursement for 85 p.c. of the approved amount from the public authority; the physician may bill the patient directly for amounts over and above what the public authority has paid. Fourthly, patient and physician may, if they agree, settle their accounts privately without involving any public authority or approved health agency.

Alberta.—The Alberta Medical Plan introduced in October 1963 provided for public regulation of approved voluntary plans with regard to minimum benefits and maximum premiums and was primarily designed to help residents having poor health or low income to purchase voluntary medical care insurance from approved non-profit and commercial agencies. It was required that the benefits provided be comprehensive and that there could be no exclusions because of age, pre-existing health conditions, or a previous record of high utilization. The plan was financed from personal premiums alone. The government contributed, as a subsidy, 80 p.c. of the premium for persons with no taxable income, 50 p.c. for persons with annual taxable incomes from \$1 to \$500, and 25 p.c. for those with taxable incomes from \$501 to \$1,000. On July 1, 1966, this plan was supplemented, for an additional premium, by other benefits including prescribed drugs, optometry, physiotherapy, ambulance service, osteopathy, chiropractic, podiatry, naturopathy and certain medical supplies and appliances. A deductible amount, co-insurance charges, and limited liability on some services applied to the extended plan.

On July 1, 1967, these plans were superseded by the Alberta Health Plan, to be operated by the Department of Health for all residents voluntarily seeking individual and family enrolment. The new plan is divided into two parts—Basic Health Services and Optional Health Services, the latter being subdivided into Options A, B and C. The Basic Plan covers all services of physicians with payment of 100 p.c. of the tariff, special dental surgery, limited optometric services, and podiatric and osteopathic services up to \$100 annually. Option A offers as additional benefits certain services not insured under the provincial hospital plan, including hospital admission charge, daily co-insurance charge in a standard ward (limited to 180 days a year in a chronic hospital), differential charge for a semi-private room, certain hospital out-patient charges, and ambulance benefits up to \$100 a year. Option B covers 80 p.c. of the cost of prescribed drugs and prosthetic appliances; the subscriber pays 20 p.c. Purchase and repair of artificial limbs, eyes and braces, prescribed by a physician, are also covered up to \$300 a year. Option C offers chiropractic and naturopathic services up to \$100 a year.

Premium rates for the Basic Plan are \$60 a year for single-person families, \$120 for families of two persons and \$160 for families of three or more. Each Option costs an additional \$12, \$24 and \$36 a year, respectively. For individuals or families with little or no taxable income, premiums for both the Basic Plan and the Options may be reduced by means of subsidies from the province.

British Columbia.—The British Columbia medical plan took effect in September 1965. As of mid-1967 it was administered by an agency directed by representatives of government and the medical profession. The benefits provided were comprehensive and included most physicians' services as well as limited physiotherapy, special nursing, chiropractic and naturopathy. For eligible residents, the government offered subsidies totalling 90 p.c. of the premium for persons with no taxable income and 50 p.c. of the premium for persons with taxable income from \$1 to \$1,000. A medical grant stabilization fund was established, initially of \$2,000,000, to cover possible deficits.

Ontario.—The Ontario medical services insurance plan began paying benefits in July 1966. The plan offered to all eligible Ontario residents, on an individual and family enrolment basis, an insurance plan that covered most physicians' services.

The government pays, as a subsidy, the full premium of applicants who had had no taxable income during the preceding year, and of those who were recipients of public assistance; 50 p.c. of the premium for single applicants who had a taxable income of \$500 or less; 50 p.c. of the premium for families of two persons and with a taxable income of \$1,000 or less; and 60 p.c. of the premium for families of three or more persons and with a taxable income of \$1,300 or less.

Health Care Programs for Welfare Recipients under the Canada Assistance Plan.—For several years Nova Scotia, Ontario, Manitoba, Alberta and British Columbia have financed most of the cost of providing certain personal health care services under programs for welfare recipients in specified categories. In Newfoundland the basis of eligibility was certification by area welfare officers of the need for specific services. During the past three or four years the trend has been to eliminate categorical status (age, disability, blindness, unemployment) as the basis of eligibility and to shift the emphasis toward tests of need applied to specific individuals and families who find themselves unable to pay for services or to purchase insurance. Such tests take into account the available income of an applicant and his or her minimum living requirements.

Enactment of the federal Canada Assistance Plan in 1966 resulted in the expansion of many existing provincial programs and in the introduction of legislation in other provinces so that, in the development of their programs, they would benefit from the cost-sharing provisions of the Plan (retroactively effective to Apr. 1, 1966). By mid-1967 programs involving payment to physicians and, frequently as well, to dentists, pharmacists, optometrists and others were in operation in all provinces.

The range of physicians' services covered in the benefits is usually comprehensive and includes medical visits in the home, office and hospital, and surgery, diagnostic services and obstetrical care. There are virtually no restrictions as regards medically required care and no limitations arising from pre-existing conditions or extra charges imposed on patients at time of receiving medical service. Other benefits that may be available include appliances, physiotherapy, special duty nursing, chiropody, medically required transportation, eye glasses and other aids, chiropractic, and home nursing. Typically, where these are benefits, restrictions related to misuse or overuse are imposed through such devices as waiting periods, prior authorizations, or co-charges.

Subsection 4.—Services for the Disabled and Chronically Ill

The success of rehabilitation programs for injured workers, veterans, handicapped children and other disability groups has encouraged more recent efforts to extend such services to all handicapped persons. Physical medicine and rehabilitation departments have been established in teaching hospitals and in most veterans' and children's hospitals. There are some 40 children's hospitals and rehabilitation centres located in the main cities across Canada and children are also treated at general hospitals and at 17 rehabilitation centres that serve both adults and children. Four rehabilitation centres are operated under workmen's compensation programs. Services for veterans are dealt with at pp. 350-351.

Hospital services available to in-patients and out-patients include physical medicine, physiotherapy, occupational therapy, social services and, in most children's and teaching hospitals, speech therapy; in addition, children's hospitals and centres operate special education classes. The rehabilitation centres provide comprehensive medical, psychosocial

and vocational services to more severely disabled persons. Provincial and community agencies, such as those providing rehabilitation and home care services, co-operate in the rehabilitation of disabled children and adults.

Most large general hospitals operate special out-patient clinics for disabilities including arthritis and rheumatism, diabetes, glaucoma, speech and hearing defects, heart diseases and orthopaedic and neurological conditions. Voluntary agencies concerned with specific disability groups such as arthritics, the blind, the deaf, children suffering from cystic fibrosis, haemophilia or muscular dystrophy, the mentally ill or retarded, or disabled persons generally, are also broadening their rehabilitation services; these include counselling, personal aids and appliances, transportation, employment and education, and sheltered workshops, as well as participation in the provision of services for the home-bound. Home care programs, under either hospital or community sponsorship, are established in the principal cities and in several rural counties. They provide nursing, home-maker, physiotherapy and other services to the disabled, the chronically ill, the aged, and the convalescent in their own homes. Several provincial health departments provide home nursing services to residents of outlying districts.

Provincial health, welfare and education departments and voluntary agencies are developing specialized services for physically and mentally handicapped children. Most provinces have registries of handicapped children, of varying coverage, and these are being found increasingly useful in the planning and co-ordination of rehabilitation services. In addition to medical rehabilitation, health departments and the crippled children's societies provide family counselling, recreation, transportation and foster home care; travelling clinics extend periodic diagnostic and treatment services to outlying areas. Special schools or classes for various groups of handicapped children are operated by local school boards in the main cities but most of the 15 residential schools for the deaf and the six for the blind are operated under provincial auspices.

Regional prosthetic research and training units established in rehabilitation centres in Montreal, Toronto and Winnipeg, and the Bio-Engineering Institute of the University of New Brunswick, supported by National Health Grants, are significant developments. The transfer of prosthetic services for veterans from the Department of Veterans Affairs to the Department of National Health and Welfare on Jan. 1, 1966, has made it possible for the provinces to extend these services to non-veterans. Artificial limbs and prosthetic appliances are available in 12 Prosthetic Centres across Canada in accordance with provisions determined by provincial health departments. A federal-provincial program assists in the extraordinary rehabilitation, maintenance and counselling costs on behalf of children with thalidomide-induced defects.

Ten university schools offer training in physical therapy and/or occupational therapy and three provide training in audiology and speech therapy. In the year ended Mar. 31, 1967, of the \$40,407,080 made available through the General Health Grants to assist the provinces in their rehabilitation programs, \$2,885,550 was specifically allocated to the Medical Rehabilitation and Crippled Children Grant. These grants are used to develop medical rehabilitation personnel (through grants to the university schools and student bursaries) and for equipment and research.

Section 3.—Hospital and Other Health Statistics

Statistical information on the health of Canadians is limited to the well established and highly standardized mortality, communicable disease and institutional statistics series, all of which have been available for a long period, and the recently established series covering operations under the federal-provincial hospital insurance program (pp. 296-298). Much statistical information is also available from provincial and other health sources.

Statistics on causes of death are given in the Chapter on Vital Statistics, pp. 269-272; those on hospital statistics in Subsection 1 following; those on notifiable diseases in Subsection 2; and those relating to physicians and their earnings in Subsection 3.

Subsection 1.—Hospital Statistics*

Canadian hospitals, for statistical purposes, are classified according to (1) type of ownership, which can be public, private or federal, and (2) type of service provided, which can be general, allied special (chronic, convalescent, rehabilitation, maternity, communicable disease and orthopaedic), mental or tuberculosis. General hospitals, which account for by far the largest number of beds, are subdivided by size, based on rated bed capacity.

In 1966, six hospitals were added to the number operating in Canada, bringing the total to 1,439 and raising the total rated bed capacity by 2.2 p.c. to more than 210,400 (Table 5). The number of rated beds per 1,000 population was 10.6, up slightly from 10.5 in 1955. Over the past few years the proportion of rated beds accounted for by general and allied special hospitals has been rising and the proportions for mental and tuberculosis hospitals have been falling. In 1966, general hospitals accounted for 54.6 p.c. of the rated beds, or 5.8 beds per 1,000 population; this ratio ranged from 4.4 in Quebec to 7.0 in Saskatchewan (Table 6). Mental hospitals had 31.7 p.c. of the rated beds (3.3 per 1,000 population), allied special hospitals had 11.0 p.c. (1.2 per 1,000 population) and the remainder (2.7 p.c.) were located in tuberculosis sanatoria (0.3 beds per 1,000 population).

* Prepared in the Institutions Section of the Health and Welfare Division, Dominion Bureau of Statistics. Detailed information will be found in the following DBS publications: *Hospital Statistics*, Vols. I to VII (Catalogue Nos. 83-210 to 83-216); *Mental Health Statistics*, Vol. III (Catalogue No. 83-205); *Tuberculosis Statistics*, Vol. II (Catalogue No. 83-207); and *List of Canadian Hospitals and Related Institutions and Facilities* (Catalogue No. 83-201).

¹ Based on estimated population as at June 1, 1966.

² Mental hospitals only; exclusive of psychiatric units in other hospitals.

³ Tuberculosis hospitals only; exclusive of tuberculosis units in other hospitals.

Although 1966 figures on number of hospitals in operation, their classification and their rated bed capacities (Tables 5 and 6) were available for 1966 at the time of preparation of this Subsection, 1965 data were the latest obtainable for Tables 7 to 13.

Total adult and child admissions to Canadian hospitals were in excess of 3,226,000 in 1965, up 1.5 p.c. from 1964 (Table 7). In both years there were 165 admissions per 1,000 population. Admissions to general hospitals numbered 3,053,517 or 156 per 1,000 population. On any given day of the year one could expect to find an average of 180,650 patients in Canadian hospitals as compared with an average daily patient load of 179,700 in 1964. General hospitals accounted for 49.9 p.c. of the 1965 average daily total and mental hospitals for an additional 37.5 p.c. Percentage occupancy varied with the type of hospital and was highest in public mental hospitals (102.8 p.c.) and lowest in public tuberculosis sanatoria (69.4 p.c.).

7.—Movement of Patients¹ and Patient-Days in Operating Public, Private and Federal Hospitals, 1964 and 1965

¹ Adults and children. ² Population estimates as at June 1. ³ Based on rated bed capacity. ⁴ Mental hospitals only; exclusive of psychiatric units in other hospitals. ⁵ Tuberculosis hospitals only; exclusive of tuberculosis units in other hospitals.

In 1965 the average length of stay of adults and children separated from public general and allied special hospitals was 11.6 days (11.5 days in 1964). Table 8 shows the variation in average length of stay by type of hospital and by region. The most striking feature of this table is that length of stay is much greater in chronic, convalescent and rehabilitation hospitals (139 days in 1965) than in other types of hospitals where average stay approximates 10 days. In public general hospitals length of stay increases with bed size because of the greater availability and utilization of more complex services in larger hospitals.

Total full-time personnel in Canadian hospitals increased by 5.7 p.c. from 259,900 in 1964 to 274,650 in 1965. As shown in Table 9, there were 186.5 full-time personnel per 100 rated beds in public general hospitals, 58.7 in mental hospitals and 83.0 in tuberculosis sanatoria.

¹ Mental hospitals only; exclusive of psychiatric units in other hospitals.

² Tuberculosis hospitals only; exclusive of tuberculosis units in other hospitals.

The total income of all public hospitals in 1965 was \$1,290,000,000, an increase of 12.4 p.c. over 1964. Table 10 shows that approximately 90 p.c. of this revenue was derived from net in-patient earnings in most types of hospitals. Total expenditure also rose by 12.4 p.c. from 1964 to \$1,342,500,000 in 1965. Gross salaries and wages accounted for between 60 p.c. and 70 p.c. of total expenditures of all types of hospitals. Table 11 shows that gross salaries and wages made up a smaller proportion of total expenditures in public general hospitals in the Atlantic Provinces than in the Central or Western Provinces in 1965.

The cost per patient-day of care in public general hospitals rose by 9.8 p.c. from \$31.00 in 1964 to \$34.05 in 1965. Table 12 shows how cost per patient-day increased with bed size in public general hospitals from \$23.43 in the 1-9 bed size to \$40.97 in hospitals with 1,000 or more beds. Provincially, cost per patient-day in public general hospitals ranged from \$24.40 in Prince Edward Island to \$41.06 in Quebec, as shown in Table 13.

¹ Excludes newborn.

Hospital Morbidity.—A growing need for additional information on illness in Canada is being met in part by a new statistical program involving separations (discharges and deaths) from the general and allied special hospitals in Canada. The program provides data on primary diagnosis, days of care, length of illness, and age composition for all hospital patients except those in mental hospitals and tuberculosis sanatoria. (Age, sex and diagnostic information on persons treated in mental hospitals and in tuberculosis sanatoria has been available at the national level for many years but no similar information has been available for persons treated in the other kinds of hospitals.) About 100 out of every 1,000 persons are hospitalized during a year and, of these, 96 or 97 are treated in general and allied special hospitals.

It should be noted that the picture of morbidity provided by these statistics is not, of course, the whole picture. A total morbidity picture would include not only the morbidity covered by in-patient hospital care but also out-patient morbidity, morbidity covered by treatment outside the hospitals, and morbidity for which no treatment is received. Nevertheless, the illnesses that receive hospital care are, in general, more serious and more important than the illnesses that do not receive hospital care and this, together with the fact that the diagnostic quality of hospital morbidity statistics is very high,

makes hospital morbidity statistics a most important source of information. Tables 14 and 15 present adult and child patients (excluding newborn) in terms of 17 diagnostic categories (Canadian) which consolidate the much more detailed International Classification of Diseases.

Subsection 2.—Notifiable Diseases*

Three categories on the notifiable list established by the Dominion Council of Health continued to predominate in 1966—venereal diseases (23,455 cases), scarlet fever and streptococcal sore throat (20,022 cases), and infectious and serum hepatitis (5,835 cases).

The rate of venereal disease notifications, which had risen from 97.3 per 100,000 population in 1959 to 121.6 in 1964, dropped to 117.6 in 1965 and to 117.2 in 1966. Infectious and serum hepatitis have declined consistently over a number of years to a rate of 29.2 per 100,000 population as compared to 33.7 in the previous year. Scarlet fever and streptococcal sore throat, on the other hand, are continuing an upward trend, increasing to 100.0 per 100,000 population from 69.4 in 1965 and 55.1 in 1964. There were varying decreases in incidence rates in 1966 over 1965 of epidemic diarrhoea of the newborn, diphtheria, dysentery, infectious encephalitis, food poisoning, viral or aseptic meningitis, pemphigus neonatorum and tuberculosis as compared to the slight increases from 1964 to 1965. Incidence rates of brucellosis and typhoid and paratyphoid fever decreased from 1965 to 1966, but rates for meningococcal infections and pertussis increased.

* Prepared in the Public Health Section, Health and Welfare Division, Dominion Bureau of Statistics.

TRENDS IN THE INCIDENCE OF MAJOR NOTIFIABLE DISEASES, 1957-66

Subsection 3.—Numbers of Physicians and Earnings of Those in Private Practice

There were an estimated 23,700 active civilian physicians in Canada (exclusive of those in the Yukon and Northwest Territories) at Dec. 31, 1965, or one physician for every 833 persons of the population. Table 18 gives the provincial distribution and population/physician ratios as estimated for 1965, and shows also the historical trends for Canada since 1901. British Columbia continues to have the most favourable provincial ratio of physicians to population, followed by Ontario and Quebec.

Earnings.—More than 98 p.c. of the earnings of privately practising physicians and surgeons in Canada were obtained from fees charged for individual items of professional service. As Table 19 shows, average gross earnings in 1965 from fees plus wages and salaries earned incidental to fee practice were \$32,799. This figure was 7 p.c. higher than in 1964 and 48 p.c. above the 1958 figure. The highest average gross earnings in 1965 were reported in Saskatchewan at \$37,474; in Ontario and Alberta they were above the national average. Average gross incomes in the remaining provinces ranged downward from \$32,037 in Manitoba to \$25,596 in Prince Edward Island. Generally, throughout the seven-year period 1959-65, highest average gross earnings have been most consistently reported in Ontario and the westernmost provinces.

The net returns to doctors, after deduction of the expenses of professional fee practice, reveal similar geographic patterns, as seen in Table 19. Net earnings for Canada as a whole averaged \$22,064 in 1965. The figure was 7.7 p.c. higher than in 1964 and 51 p.c. above the 1959 figure. The highest provincial average net income was reported by Ontario doctors at \$24,188 followed by Saskatchewan doctors at \$23,530. The lowest average net income was reported in Prince Edward Island.

¹ Includes incidental wages and salaries.

² Excludes physicians employed on a salaried basis under the Cottage Hospital Medical Service and by subsidized voluntary prepayment plans. The estimated number of such excluded physicians in 1965 was 95.

³ Excludes some physicians employed on a salaried basis in private group-practice. The estimated number of such excluded physicians in 1965 was 57.

⁴ Data for the Yukon and Northwest Territories are posted for record only.

⁵ Includes net professional fees after deducting expenses of practice, and wages and salaries incidental to fee practice.

PART II.—PUBLIC WELFARE AND SOCIAL SECURITY

Responsibility for social welfare is shared by all levels of government. Comprehensive income-maintenance measures such as the Canada Pension Plan, old age security pensions, family allowances, youth allowances and unemployment insurance, where nation-wide co-ordination is required, are administered federally. The Federal Government gives substantial aid to the provinces in meeting the costs of public assistance and also provides services for special groups such as veterans, Indians, Eskimos and immigrants. The Department of National Health and Welfare is generally responsible for federal welfare matters although the Departments of Veterans Affairs, Indian Affairs and Northern Development, and Manpower and Immigration operate programs for specific groups.

Administration of welfare services is primarily the responsibility of the provinces but the provision of services is often assumed by local authorities, generally with financial aid from the province.

Co-ordination in welfare matters between different levels of government and between government and voluntary authorities is facilitated by the National Council of Welfare, an advisory body to the Minister of National Health and Welfare. The Council consists of the federal Deputy Minister of Welfare who acts as chairman, the provincial deputy ministers of welfare, and ten other persons appointed for three-year terms by the Governor in Council.

Section 1.—Federal Government Programs

Subsection 1.—Canada Pension Plan

The Act establishing the Canada Pension Plan received Royal Assent on Apr. 3, 1965 and was proclaimed in force on May 5 of the same year. The collection of contributions commenced in January 1966, and in January 1967 the first benefits were paid in the form of Retirement Pensions. The Plan represents an important milestone in Canadian social development. It will enable millions of people to make financial provision for their retirement and to protect themselves and their dependants or survivors against loss of income in the event of the disability or death of the head of the family.

The Plan is universally applicable throughout Canada, except in the Province of Quebec where a comparable pension plan has been established. The Canada and Quebec Pension Plans, however, are closely co-ordinated and operate virtually as a single program. Together, they cover almost all members of the labour force in Canada. Benefit credits accrued under the Canada or Quebec Plans are portable throughout Canada. A contributor who may have worked for more than one employer during his lifetime or who may be self-employed for all or part of his working life will accumulate pension credits regardless of where he may work in Canada. In addition, benefits under the Plan are payable to beneficiaries whether or not they live in Canada. Every contributor to the Plan must have a Social Insurance Number so that his pensionable earnings may be accurately recorded for benefit purposes.

To participate in the Plan, a person must be between the ages of 18 and 70 and earn more than \$600 yearly as an employee, or at least \$800 if he is self-employed. As of 1967, contributions are made on earnings between \$600 and \$5,000 a year by both employees and self-employed persons. Employees contribute at the rate of 1.8 p.c. and a matching contribution is made by their employers; self-employed persons contribute at the rate of 3.6 p.c. No contributions are to be made by persons while they are receiving disability pensions. Although contributions are not paid on the first \$600 of annual earnings, that amount is nevertheless included in the calculation of benefits. Benefits are classified under three main headings: Retirement Pensions; Disability Pensions for contributors, with additional benefits for their dependent children; and Survivors' Benefits, consisting of a widow's pension, a disabled widower's pension, orphans' benefits, and a lump sum death benefit.

In 1967, Retirement Pensions became payable to contributors who were 68 years of age or over provided that, if under age 70, they were retired from regular employment. Each year the minimum pensionable age is being reduced one year until, commencing in 1970, Retirement Pensions will be payable to contributors who have retired from regular employment at the age of 65. In the case of contributors who have reached 70 years of age, Retirement Pensions are payable regardless of whether they are retired. They become payable at their full rates beginning in January 1976. These rates amount to 25 p.c. of what the up-dated pensionable earnings of contributors have averaged since Jan. 1, 1966, or from age 18, whichever comes later.

Contributors who become eligible for Retirement Pensions prior to 1976 receive reduced amounts. In the calculation of retirement pensions that commence during this period, pensionable earnings are averaged over ten years or 120 months. The only exception to this rule is where a Disability Pension has been paid, in which case the time during which that pension was in pay is deducted from the ten years, and the remaining period is then used for averaging purposes. In the calculation of Retirement Pensions that commence after 1975, provision is made to assist the contributor who may have had periods of low or no earnings during his contributory period. This is accomplished by dropping out the number of months during which contributions may have been made after age 65, and either by using the pensionable earnings in those months in place of earlier periods of lesser or no earnings, or by dropping such pensionable earnings out of the calculation if they are less favourable to him. Also dropped out of the calculation are up to 15 p.c. of the number of months he could have contributed before age 65 and the earnings in an equal number of months, although the drop-out must not reduce the number of months for averaging purposes to less than 120.

A person under 70 years of age who is in receipt of a Retirement Pension must meet an earnings test. In 1967, the maximum annual remuneration from employment which he may earn without affecting the amount of his pension is \$900. Should his yearly earnings exceed this figure, his pension is reduced as follows: when employment earnings are between \$900 and \$1,500, the reduction in pension will equal 50 p.c. of the amount over \$900, or an amount of up to \$300 per year; if earnings exceed \$1,500, the amount to be deducted will be \$300, plus the actual amount that is earned over \$1,500. However, the amount of his pension is not subject to reduction for any month in which the pensioner does not earn over \$75. At age 70, a contributor is entitled to receive the full amount of his Retirement Pension regardless of the amount of his earnings.

Disability Pensions become payable in May 1970. A contributor is considered to be disabled if he has a physical or mental disability that is so severe and likely to continue so long that he cannot engage in steady work. Disability Pensions, plus benefits for the dependent children of disabled contributors, will be available provided contributions have been made to the Plan for the required minimum period, namely, for five years if a Disability Pension is to commence before 1976. The amount of the Disability Pension consists of a flat-rate payment calculated by multiplying \$25* by the ratio that the Pension Index for the year in which the pension commences bears to the Pension Index for the year 1967, plus 75 p.c. of what the contributor's monthly Retirement Pension would have been had he reached age 65 when his Disability Pension commenced. Benefits payable on behalf of a disabled contributor's dependent children consist of an amount equal to the flat-rate payment, mentioned above, for each of the first four children and one half of that amount for each additional child. Benefits are payable until the child reaches age 18, or up to the age of 25 years if he continues to attend school or university full time.

Survivors' Benefits become payable in February 1968. They will be paid to or on behalf of the survivors of a deceased contributor who has made contributions for the minimum qualifying period, namely, three years for benefits commencing before 1975.

A woman who is widowed between ages 45 and 65 is entitled to a Widow's Pension consisting of the flat-rate payment (previously mentioned) plus 37½ p.c. of her husband's

* Subject to adjustment (see p. 328, para 4).

Retirement Pension. Should her husband not be in receipt of a Retirement Pension at the time of his death, such a pension is calculated in prescribed manner for the purposes of computing the amount of the Widow's Pension. If a woman is widowed under age 45, the same pension is paid provided she has dependent or disabled children or is herself disabled. If she does not meet any of these requirements, her pension is reduced by an amount equal to 1/120 for each month she is less than age 45 at the time of her husband's death. Accordingly, if a woman is widowed at age 35 or less, and has no dependent or disabled children and is not herself disabled, she will not receive a Widow's Pension until she reaches 65 years of age, unless she becomes disabled in the meantime.

A widow age 65 or over receives a Widow's Pension equal to 60 p.c. of her husband's Retirement Pension. This is true for a widow regardless of her age at the time her husband died or whether she was receiving a Widow's Pension before she became 65. Again, if her husband was not in receipt of a Retirement Pension at the time of his death, one is calculated in prescribed manner in order to compute the amount of the Widow's Pension. Women who receive Widows' Pensions may also have contributed to the Canada Pension Plan themselves and consequently may be entitled to Retirement or Disability Pensions in their own right. In such cases, the Widow's Pension will be combined with the other pension, in accordance with a prescribed formula, but the combined total cannot exceed the maximum Retirement Pension payable under the Act.

Orphans' Benefits are payable on behalf of a deceased contributor's dependent children. The rates are the same as the benefits for the children of a disabled contributor. A Disabled Widower's Pension is payable where a widower is disabled and is wholly or substantially dependent on his wife for financial support at the time of her death. The test of disability is the same as that for a person who claims a Disability Pension and the pension formula is the same as that for a disabled widow. When a contributor dies, a lump sum Death Benefit equal to six times his monthly Retirement Pension will be paid to his estate. This benefit is subject to a maximum of 10 p.c. of the maximum on pensionable earnings which, in 1967, would mean a payment not exceeding \$500. Should a contributor not be in receipt of a Retirement Pension at the time of his death, a calculation is made in prescribed manner for purposes of establishing the amount of the Death Benefit.

The Plan provides for the periodic adjustment of a number of its basic components. The maximum on pensionable earnings for 1966 and 1967 was set at \$5,000 a year. Until 1976, this maximum is to be adjusted in line with changes in the Pension Index which, in turn, is based on the Consumer Price Index. Beginning in 1976, the maximum on pensionable earnings will be adjusted in accordance with changes in the Earnings Index which will reflect changes in average wage and salary levels in Canada. The flat-rate components of Disability, Widows' and Disabled Widowers' Pensions, as well as the flat-rate benefits payable to the dependent children of disabled or deceased contributors, are also subject to adjustment by the Pension Index before going into pay. After benefits become payable, the amounts will be subject to periodic up-dating in accordance with increases in the Pension Index.

Any contributor or beneficiary under the Plan has the right to appeal decisions with which he is dissatisfied. Appeals by employees and employers regarding coverage and contributions are first made to the Minister of National Revenue and, if the individual is not satisfied with the Minister's decision, he may then appeal to the Pension Appeals Board whose decision is final. For self-employed persons, appeals with reference to the assessment of their earnings for Canada Pension Plan purposes are treated in the same way as appeals under the Income Tax Act. With respect to benefits, there is a three-stage appeal procedure: first, to the Minister of National Health and Welfare; secondly, to a Review Committee; and thirdly, to the Pension Appeals Board whose decision is final.

The legislation provides for the investment of the funds that accrue from monthly contributions, less the estimated amounts required to pay benefits and administrative costs over a three-month period. These funds are made available to each province on the basis of the relationship between the contributions made to the Plan by and on behalf of

residents of that province and the total contributions made to the Plan. Funds not borrowed by the provinces are invested in federal securities. All benefits and all costs incurred in the administration of the program are financed solely from the contributions made by employees, employers and self-employed persons and the interest earned from the investment of funds. In other words, the Canada Pension Plan is entirely self-supporting.

Provision has been made for the establishment of an Advisory Committee representing employers, employees, self-employed persons and the public. This Committee is to review, from time to time, the over-all operations of the Plan, the state of the Investment Fund, and the adequacy of coverage and benefits. The reports of the Committee are to be made to the Minister of National Health and Welfare and are to be included in the Annual Reports on the Plan. Authority is also provided for the purpose of entering into arrangements with other countries to achieve as full coverage of persons in the labour force in Canada as is possible and to ensure the portability of pension credits between Canada and the countries concerned.

Subsection 2.—Old Age Security and Guaranteed Income Supplement

Old Age Security.—Under the Old Age Security Act of 1951, as amended, the Federal Government pays a monthly pension to all persons who meet the necessary residence and age qualifications. Prior to 1966, the pension was payable to those age 70 or over but in 1966 a reduction in pensionable age from 70 to 65, to be completed over a five-year period, was begun. By 1967, the pension was payable at age 68 and over, in 1968 it is payable to those age 67 and over, in 1969 to those age 66 and over and, from 1970 on, to those age 65 and over. Until 1967 the pension amounted to \$75 a month but, in 1968 and succeeding years, the amount may be adjusted in line with changes in the Pension Index developed for the Canada Pension Plan (see p. 328).

The old age security pension is payable to a person of attained age who has resided in Canada for ten years immediately preceding the approval of his application for the pension. Any gaps in the ten-year period may be offset if the applicant had resided in Canada in earlier years for periods of time equal in total to double the length of the gaps; in this case, however, the applicant must also have resided in Canada for one year immediately before his application for pension. The pension is also payable to persons of attained age who have left Canada before reaching that age but who have had 40 years of residence in Canada since age 18. A pensioner may absent himself from Canada and continue to receive payments. If he has lived in Canada for 25 years since his 21st birthday, payment outside of Canada may continue indefinitely; if not, payment is continued for six months, in addition to the month of departure, and is then suspended, to be resumed only with the month in which he returns to Canada.

The program is administered by the Department of National Health and Welfare through regional offices located in each provincial capital, to which application is made for pension. It is financed through a 3-p.c. sales tax, a 3-p.c. tax on corporation income and, subject to a limit of \$240 a year, a 4-p.c. tax on taxable personal income. The revenues from these sources are paid into a separate fund called the Old Age Security Fund, from which are paid the Old Age Security pensions and, from Jan. 1, 1967, benefits under the Guaranteed Income Supplement program (see below).

Guaranteed Income Supplement.—An amendment to the Old Age Security Act, approved in December 1966, provides for the payment of a monthly guaranteed income supplement to Old Age Security pensioners who have little or no income other than the pension. The supplement is limited to pensioners born on or before Dec. 31, 1910, who by reason of age are or will be unable to benefit substantially from the Canada or Quebec Pension Plans. The program commenced on Jan. 1, 1967.

Pensioners with only the Old Age Security pension will receive a guaranteed annual income of \$1,260 for a single pensioner and, for a married couple who are both pensioners,

\$2,520. This consists of the monthly \$75 pension and the monthly supplement of \$30, which is subject to an income test. Pensioners with income in addition to their old age security pension may receive partial benefits. Beginning January 1967 the maximum supplement is \$30 a month; in any year after 1967 it is to be 40 p.c. of the amount of the flat-rate Old Age Security pension.

The maximum supplement is reduced by \$1 a month for every full \$2 a month of income over and above the Old Age Security pension. Income for this purpose is the same as that computed in accordance with the Income Tax Act. In the case of a married couple, each is considered to have one half of their combined income. Where one spouse will not be receiving an Old Age Security pension at any time in the current year, \$450 is deducted from one half of the combined income in calculating the income of the pensioner for supplement purposes. Payments will not be made to married couples unless both spouses submit returns. However, in order to prevent undue hardship when no statement of income is obtainable, a person may be deemed to be single for purposes of determining income. Furthermore, although marital status is determined as at Dec. 31 of the preceding year, even if this status should change in the current year, a special provision allows a person to be deemed either married or single in the preceding year.

If a pensioner who is in receipt of a supplement leaves Canada, the supplement will be paid for the month of departure and for six further months. Payment will then be discontinued until his return.

The Guaranteed Income Supplement program is administered in conjunction with the Old Age Security pension program. An application for the supplement is sent to each person when he begins to receive the Old Age Security pension and subsequently at the beginning of each calendar year. Entitlement is re-assessed each year on the basis of the pensioner's income in the preceding year.

1.—Old Age Security and Guaranteed Income Supplement Statistics, Year or Period¹ Ended Mar. 31, 1967 with Totals for 1965-67

Subsection 3.—Family Allowances

The Family Allowances Act of 1944 is designed to assist in providing equal opportunity for all Canadian children. The allowances do not involve a means test and are paid from the federal Consolidated Revenue Fund. They do not constitute taxable income

but there is a smaller income tax exemption for children eligible for allowances. The Province of Quebec introduced its own family allowances program, supplementing the federal scheme, under legislation enacted in 1967 (see p. 342).

Allowances are payable in respect of every child under the age of 16 years who was born in Canada, or who has been a resident of the country for one year, or whose father or mother was domiciled in Canada for three years immediately prior to the birth of the child. Payment is made by cheque each month, normally to the mother, although any person who substantially maintains the child may be paid the allowance on his behalf. Allowances are paid at the monthly rate of \$6 for each child under 10 years of age and \$8 for each child age 10 or over but under 16 years. If the allowances are not spent for the purposes outlined in the Act, payment may be discontinued or made to some other person or agency on behalf of the child. Allowances are not payable for any child who fails to comply with provincial school regulations or on behalf of a girl who is married and under 16 years of age.

The program is administered by the Department of National Health and Welfare through regional offices located in each provincial capital. The Regional Director located at Edmonton also administers the accounts of residents in the Yukon and Northwest Territories.

The Federal Government pays family assistance, at the rates applicable for family allowances, for each child under 16 years of age resident in Canada and supported by an immigrant who has landed for permanent residence in Canada, or by a Canadian returned to Canada to reside permanently. The assistance, which is payable monthly for the first year of the child's residence in Canada, is intended to bridge the gap until the child becomes eligible for family allowances.

Subsection 4.—Youth Allowances

Legislation providing for a program of youth allowances became effective Sept. 1, 1964. The Federal Government does not provide youth allowances in Quebec, which has had its own program since 1961, but that province is compensated by a tax abatement adjusted to equal the amount that the Federal Government would otherwise have paid in allowances to Quebec residents.

Under the federal program, monthly allowances of \$10 are payable in respect of all dependent youths age 16 and 17 who are receiving full-time educational training or are precluded from doing so by reason of physical or mental infirmity. Both the parent or guardian and the youth must normally be physically present and living in a province other than Quebec. The allowance is not payable to a parent who resides in Quebec or outside Canada, regardless of where his child may be attending school. However, a dependent youth may attend school in Quebec or outside Canada, or, if disabled, receive care or training in Quebec or outside Canada and still be considered eligible, on the basis that he is a resident of a province other than Quebec but is temporarily absent.

Allowances normally commence with the month following that in which family allowances cease and continue until the school year terminates. They are paid retroactively for the summer months when the youth returns to school at the commencement of the new school year. Allowances for a disabled child not attending school, however, are payable continuously throughout the year. Should the youth leave school, leave the country permanently, cease to be maintained, take up residence in Quebec, or die, the allowance ceases. Otherwise, the youth allowance continues until the end of the month in which the youth reaches age 18. Youth allowances are considered not to be income for any purpose of the Income Tax Act.

The program is administered by the Department of National Health and Welfare. The National Director of the family allowances and old age security programs also administers youth allowances, assisted by regional directors located in each of the provincial capitals other than Quebec City. The costs of youth allowances are met from the Consolidated Revenue Fund.

¹ Seven months; program became effective Sept. 1, 1964.

Section 2.—Federal-Provincial Programs

Subsection 1.—Canada Assistance Plan

The Canada Assistance Plan was enacted in 1966 as a comprehensive public assistance measure to complement other income security measures. It provides, under agreements with the provinces, federal contributions of 50 p.c. of the costs of assistance to persons in need and of the costs of certain welfare services. The Plan is designed to replace the Unemployment Assistance Act, 1956, although the latter will continue in

effect in some provinces for an interim period with respect to certain programs that utilize a means test and are not covered under the Canada Assistance Plan. The Canada Assistance Plan legislation provides that the provinces may discontinue their programs of old age assistance, blind persons allowances and disabled persons allowances and instead give aid under their general programs, with costs shared under the Canada Assistance Plan. All provinces had signed agreements under the Canada Assistance Plan by the end of August 1967. The arrangements for contracting out of certain shared-cost programs that were introduced in 1965 under the Established Programs (Interim Arrangements) Act are applied to Quebec's agreement under the Plan.

Effective from Apr. 1, 1966, the Canada Assistance Plan extends federal sharing to include the following costs, which were not shared under the Unemployment Assistance Act: assistance to needy mothers with dependent children, maintenance of children in the care of provincially approved child welfare agencies, health care services to needy persons, and the extension of welfare services to prevent or remove causes of dependency or to assist recipients in achieving self-support. The only eligibility requirement specified is that of need, which is to be determined through an assessment of budgetary requirements as well as of income and resources. A province must not require previous residence as a condition of eligibility for assistance or for continued assistance. Rates of assistance and eligibility requirements are set by the province so that they may be adjusted to local conditions and the needs of special groups. The Plan requires that the provinces establish procedures for appeal from decisions that relate to the provision of assistance.

The Federal Government reimburses the provinces for 50 p.c. of the cost of assistance provided to persons in need and for 50 p.c. of certain costs of improving or extending welfare services.

"Assistance" includes any form of aid to or on behalf of persons in need for the purpose of providing basic requirements such as food, shelter and clothing; items necessary for the safety, well-being or rehabilitation of a person in need, or for a handicapped person; special home care such as a home for the aged, a nursing home or a welfare institution for children; travel and transportation; funerals and burials; health care services; welfare services purchased by or at the request of provincially approved agencies; and comfort allowances for inmates of institutions.

The cost of improving and extending welfare services may be calculated either (1) as the amount by which the cost of providing welfare services exceeds that of the period from Apr. 1, 1964 to Mar. 31, 1965 or (2) as the cost of employing persons who are engaged wholly or mainly in the performance of welfare service functions and who are employed in positions filled after Mar. 31, 1965. Included for sharable purposes are the costs of salaries and employee benefits, travel, research, consultation, fees for conferences and seminars, and certain costs of staff training. The sharing of costs of work activity projects that prepare persons for employment and the extension of provincial welfare services to Indians on reserves, on Crown lands or in unorganized territory are governed by special agreements.

Subsection 2.—Unemployment Assistance

Under the Unemployment Assistance Act 1956, as amended, the Federal Government was authorized to enter into an agreement with any province to reimburse it for 50 p.c. of the unemployment assistance expenditures made by the province and its municipalities to persons and their dependants who are unemployed and in need. Payments to both employable and unemployable persons are sharable, as are the costs of maintaining persons in homes for special care, and the costs of supplementary aid to recipients of old age security

pensions, old age assistance, blind persons allowances, disabled persons allowances and unemployment insurance benefits where the amount of assistance is determined on the basis of need. Federal sharing was extended to mothers' allowances from Apr. 1, 1966. Effective from Apr. 1, 1965, Quebec received partial payment for assistance costs under the Established Programs (Interim Arrangements) Act under which the province is entitled to compensation in the form of a tax abatement and an equalization payment.

As noted above, all programs under which aid is based on a needs test will be included for reimbursement under the Canada Assistance Plan under which all provinces have signed agreements. The Unemployment Assistance Act, however, will remain in effect for a transitional period in some provinces to cover the costs of aid to residual groups of persons under certain means test programs during the process of conversion to needs test programs.

¹ Includes dependants.

² Payment figures shown are for the months to which the claims made under the program relate and include amounts paid to the provinces by the Federal Government after the end of the fiscal year.

³ During the year, Quebec claims were reduced by \$20,149,002, representing the federal portion of the cost for which compensation was provided in the form of a tax abatement.

Subsection 3.—Old Age Assistance

The Old Age Assistance Act of 1951, as amended, provides for federal reimbursement to the provinces for assistance to persons age 65 or over who are in need and who meet the ten-year residence and income requirements. For an unmarried person, total income allowed, including assistance, may not exceed \$1,260 a year. For a married couple, it may not exceed \$2,220 a year or, when the spouse is blind within the meaning of the Blind Persons Allowance Act, \$2,580 a year.

A pensioner is transferred to Old Age Security on reaching the eligible age for it (see p. 329). The federal contribution may not exceed 50 p.c. of \$75 a month or of the assistance paid, whichever is less. The province administers the program and, within the limits of the federal Act, may fix the amount of assistance payable, the maximum income allowed and other conditions of eligibility. Effective Apr. 1, 1965, Quebec withdrew from this program.

Under the terms of the Canada Assistance Plan a province may elect to aid needy persons over 65 years of age under a general assistance program with costs shared under the Canada Assistance Plan (see p. 333). Accordingly, several provinces no longer accept applications under the Old Age Assistance program. The provinces may also transfer current recipients of old age assistance to their general programs, provided that there is no decrease in benefits, and they are gradually altering their programs in this way.

5.—Old Age Assistance Statistics, by Province, Year Ended Mar. 31, 1967 with Totals for 1965-67

² Part of the decrease resulted from the

Subsection 4.—Allowances for Blind Persons

The Blind Persons Act of 1951, as amended, provides for federal reimbursement to the provinces for allowances to blind persons age 18 or over who meet the ten-year residence and income requirements. For an unmarried person, total income including the allowance may not exceed \$1,500 a year; for a person with no spouse but with one or more dependent children, \$1,980; for a married couple, \$2,580. When the spouse is also blind, income of the couple may not exceed \$2,700.

The federal contribution may not exceed 75 p.c. of \$75 a month or of the allowance paid, whichever is less. The province administers the program and, within the limits of the federal Act, may fix the amount of allowance payable and the maximum income allowed. Effective Apr. 1, 1965, Quebec withdrew from this program.

Under the terms of the Canada Assistance Plan a province may elect to aid needy blind persons under a general assistance program with costs shared under the Canada Assistance Plan (see p. 333). Accordingly, several provinces no longer accept applications under the Blind Persons Allowance Act. The provinces may also transfer current recipients of blind persons allowances to their general programs, provided that there is no decrease in benefits, and are gradually altering their programs in this way.

¹ Effective Apr. 1 1965, Quebec withdrew from this program.

Subsection 5.—Allowances for Disabled Persons

The Disabled Persons Act of 1954, as amended, provides for federal reimbursement to the provinces for allowances paid to permanently and totally disabled persons age 18 or over who are in need and who meet the required definition of "permanent and total disability", the ten-year residence requirement and specified income limits. For an unmarried person, total income including the allowance may not exceed \$1,260 a year. For a married couple the limit is \$2,220 a year except that if the spouse is blind within the meaning of the Blind Persons Act, income of the couple may not exceed \$2,580 a year.

The federal contribution may not exceed 50 p.c. of \$75 a month or of the allowance paid, whichever is less. The province administers the program and, within the limits of the federal Act, may fix the amount of allowance payable, the maximum income allowed and other conditions of eligibility. Effective Apr. 1, 1965, Quebec withdrew from this program.

Under the terms of the Canada Assistance Plan a province may elect to aid needy disabled persons under a general assistance program with costs shared under the Canada Assistance Plan (see p. 333). Accordingly, several provinces no longer accept applications under the Disabled Persons Allowances Act. The provinces may also transfer current recipients of disabled persons allowances to their general programs, provided that there is no decrease in benefits, and are gradually altering their programs in this way.

Subsection 6.—Fitness and Amateur Sport Program

The Fitness and Amateur Sport Act of 1961, administered by the Minister of National Health and Welfare, provides up to \$5,000,000 a year to be spent on the encouragement, promotion and development of active leisure pursuits for everyone in Canada. Although the federal, provincial and municipal governments provide the funds and resources, the programs are carried out almost entirely by non-governmental agencies. Under the Act, Canadian participation in active recreation and amateur sport can be promoted internationally, nationally, provincially and locally through financial assistance, technical guidance, the provision of teaching materials, assistance to training, research and the construction of facilities. The National Advisory Council of Fitness and Amateur Sport advises the Minister of National Health and Welfare in fitness and amateur sport matters; its 30 members are chosen for their interest and experience, with at least one member from each province.

The federal program has five elements. *Grants to National Organizations*, totalling more than \$1,000,000 a year, go to some 50 national fitness and sporting organizations to help to train coaches, to improve standards of instruction, to increase participation in sports,

to aid the holding of national and regional competitions, and to assist Canadian athletic teams at international competitions. *Grants for Athletic Events* of nation-wide interest assist in the holding of such events as the 1967 Pan-American Games in Winnipeg and the 1967 Canadian Winter Games in the Quebec area. *Grants for Training and Research* are made for graduate study in fitness and amateur sport, for research fellowships, and for scholarships and bursaries for undergraduate study in physical education and recreation. *Services of the Department of National Health and Welfare* include the provision of technical advice, training material and promotional aids. Visual aids for coaching, printed guides on particular sports and recreational activities, and technical information on the construction and use of facilities are provided. Committees of the National Advisory Council meet frequently with the executives of sports organizations to discuss policy and a federal-provincial committee of government officials advises on and co-ordinates governmental aspects of the program. The Department also co-ordinates work done by other federal agencies in fitness and amateur sport. *Grants to the Provinces* of \$1,000,000 a year are made to those that enter into cost-sharing agreements for provincial programs of fitness and amateur sports. The Federal Government meets 60 p.c. of the cost of projects and the full cost of the undergraduate scholarships and bursaries. Applications for all grants at the provincial or local level are made in the first instance to the responsible provincial department. Most of the ideas for recreational activities and plans originate in the municipal recreation departments where the needs of the individual communities are best known.

Subsection 7.—National Welfare Grant Program

The National Welfare Grant Program was established in 1962 to help develop and strengthen welfare services in Canada through a general welfare and professional training grant and a welfare research grant. The variety of provisions within the program, along with its associated consultative and technical services, allow it to operate as a flexible instrument in the development of welfare services and to give a major emphasis to experimental activities in the welfare field.

For the year ending Mar. 31, 1968, \$2,500,000 was allotted to the program. Provincial governments, municipal welfare departments, non-governmental welfare and correctional agencies, universities and individuals may be the ultimate recipients of grants under one or more provisions of the program. Some are financed and administered entirely by the Federal Government; others require application through a provincial department of welfare that actually makes the award on a cost-sharing basis with the Federal Government.

General welfare, bursary, training and staff development grants are shared provisions. General welfare grants provide funds for projects to improve welfare administration, to develop provincial consultative and co-ordinating services, and to strengthen and extend public and voluntary welfare services in child welfare, aging, general assistance and other welfare fields. Bursaries are provided for full-time graduate training at Canadian schools of social work, and training grants are available for employees of government and voluntary welfare agencies. Staff development grants provide support for a wide variety of staff training programs. The other provisions of the program are administered by the Federal Government. Welfare scholarships are awarded for graduate study in Canadian schools of social work and fellowships for advanced study at Canadian and foreign universities. Teaching and field instruction grants assist Canadian schools of social work with the salaries of additional staff required to implement the program.

Under the welfare research grant, funds are provided for a variety of research studies undertaken by public and voluntary welfare and correctional agencies, universities and research institutions.

Effective Apr. 1, 1967, a mental retardation grant, established for five years only, will be administered in conjunction with the National Welfare Grants program. It will

support research and demonstration projects designed to expand knowledge and to apply that knowledge along with experience to mitigate the continuing growth in the burden of disability due to retardation.

Expenditures under the program for the year ended Mar. 31, 1967 totalled \$1,278,083, distributed as follows: research, \$171,503; bursaries, fellowships and scholarships, \$214,328; training, \$21,435; teaching and field instruction, \$379,900; staff development, \$37,490; national voluntary welfare agency projects, \$61,692; and welfare services and demonstration projects, \$391,735.

Subsection 8.—Vocational Rehabilitation

The federal-provincial vocational rehabilitation program, which began in 1952, was consolidated and extended under the Vocational Rehabilitation of Disabled Persons Act, 1961. Federal-provincial agreements under this Act provide for equal sharing of costs between the Federal Government and the provinces. These costs include co-ordination and provision of services to disabled or other vocationally disadvantaged individuals, training of rehabilitative personnel and research and publicity. Approved services, supplied by a provincial government or purchased from voluntary agencies by a provincial government, comprise medical, social and vocational assessment, counselling restorative services, the provision of prostheses, vocational training or educational upgrading, rehabilitation allowances, and tools, books and equipment. Vocational training has been arranged under the provisions of the Technical and Vocational Training Assistance Act, which provides for equal sharing by Canada and the provinces of the cost of training disabled persons. Employment placement is provided through Canada Manpower Centres of the Department of Manpower and Immigration.

In each participating province a provincial co-ordinator or director of rehabilitation is responsible for the co-ordination and administration of services to disabled or vocationally disadvantaged persons. The federal aspects of the program are administered by the Director of Vocational Rehabilitation of the federal Department of Manpower and Immigration. Liaison with the provinces is carried out from Ottawa and the vocational rehabilitation staff supplies specialist consultative services. It is planned that the federal responsibilities in this area will gradually be assumed by the five regional manpower offices of the Department's Canada Manpower Division. The Vocational Rehabilitation Branch, through its Section on Older Workers, also has the function of encouraging a more favourable employment climate for older workers through an educational program, encouragement of research, maintenance of liaison with employer and labour organizations and voluntary agencies in Canada, assembly and dissemination of informational material, and supportive services to the regional manpower offices. During 1966-67, there was a broader acceptance of the idea that vocational rehabilitative services, which had worked successfully for the physically or mentally disabled, could be applied with equal benefit to socially disadvantaged persons, such as older workers, parolees, ex-convicts, people with personal, attitudinal, emotional or family problems and those with significantly low educational levels or lacking in knowledge of the world of work.

Among other agencies contributing to vocational rehabilitation are the Workmen's Compensation Boards in all provinces which provide for the rehabilitation of injured workmen. The prosthetics services established for veterans are being extended to the general public through 12 prosthetic centres administered by the Department of National Health and Welfare.

In the year ended Mar. 31, 1967, federal-provincial expenditures under the vocational rehabilitation program (exclusive of vocational training) totalled \$2,050,083. Reports were received on 2,679 disabled or vocationally disadvantaged persons rehabilitated during the year. Before rehabilitation the cost of supporting these people and their dependants was an estimated annual amount of \$2,045,512; after rehabilitation the estimated annual earnings of those gainfully employed were \$7,084,755.

Section 3.—Provincial Welfare Programs

Major welfare programs governed by provincial legislation include general assistance and social allowances, mothers' allowances, services for the aged, and child welfare services. Also, the Province of Quebec operates the Quebec Pension Plan, which is comparable to the Canada Pension Plan (see pp. 326-329), and has also enacted in 1967 its own family allowances program (see p. 342). In most provinces, responsibility for a number of the programs is shared by the provinces and their municipalities. Provincial administration is carried out through the department of public welfare in each province; several departments have established regional offices to facilitate administration and to provide consultative services to the municipalities.

The provincial departments of public welfare are placing increasing emphasis on standards of administration and on rehabilitative services for social assistance recipients. Several provinces recently have introduced legislation under which the province will share with the municipalities the costs of preventive and rehabilitative welfare services.

Public services are supplemented by those of voluntary agencies whose interests include the welfare of families and children and of groups with special needs, such as the aged, recent immigrants, youth groups, and released prisoners. Welfare councils and social planning councils contribute to the planning and co-ordinating of local welfare services. Local voluntary agencies and institutions may receive public grants, depending on the nature and standard of their services although their main support is usually from united funds or community chests, or from sponsoring organizations.

Subsection 1.—General Assistance

All provinces make legislative provision for general assistance on a means or needs test basis to needy persons and their dependants who cannot qualify for other forms of aid, and some provinces include those whose benefits under other programs are not adequate. Where necessary, the aid may be for maintenance in homes for special care. In addition to financial aid for the basic needs of food, clothing, shelter and utilities, some provinces provide incapacitation or rehabilitation allowances, counselling and homemaking services, and post-sanatorium care and some provide allowances to persons with long-term need: persons who are unable to support themselves because of mental or physical disability or because of their age, mothers with dependent children and, in two provinces (Ontario and Quebec), needy widows and unmarried women of 60 years of age or over. This assistance is administered by the province or by the municipalities with substantial financial support from the province, which, in turn, is reimbursed by the Federal Government under the Canada Assistance Plan for 50 p.c. of the provincial and municipal assistance given (see pp. 332-333).

The provincial departments of public welfare have regulatory and supervisory powers over municipal administration of general assistance and may require certain standards as a condition of provincial aid. Length of residence is not a condition of aid in any province, but in four provinces the residence of the applicant as defined by statute determines which municipality may be financially responsible for his aid. Municipal residence is not a factor in British Columbia and Saskatchewan which have equalized municipal payments, or in Quebec where municipalities may administer the general assistance program but are not required to contribute to the cost of allowances, or in Newfoundland, Prince Edward Island and New Brunswick where aid is administered provincially. The provincial authority takes responsibility for aid in unorganized areas within the province. Under the federal Unemployment Assistance Act and subsequently under the Canada Assistance Plan, all provinces have agreed that residence shall not be a condition of assistance for applicants who move from one province to another. For persons without provincial residence (usually a period of one year), aid may be given by the province or the municipality and a charge-back may be made to the province or municipality of residence.

The formula for provincial-municipal sharing of costs is determined by the province. In the seven provinces where the municipalities have some administrative responsibility, a substantial proportion of the costs of aid given to needy persons is borne by the province through assumption of responsibility for aid to certain categories of persons and through reimbursement of municipal expenditures varying by province from 40 p.c. to 100 p.c.

Subsection 2.—Mothers' Allowances

All provinces make provision for allowances to needy mothers with dependent children. A number of provinces include such allowances in a broadened program of provincial allowances to persons in several categories of long-term need or have incorporated this legislation with general assistance within a single Act.

Subject to conditions of eligibility which vary from province to province, mothers' allowances or their equivalent are payable to applicants who are widowed, or whose husbands are mentally incapacitated or are physically disabled and unable to support their families. They are also payable to deserted wives who meet specified conditions; in several provinces to mothers whose husbands are in penal institutions, or who are divorced or legally separated; in some, to unmarried mothers; and in Ontario, Quebec and Nova Scotia to Indian mothers. Foster mothers are eligible under certain circumstances in most provinces.

The age limit for children is 16 years in most provinces, with provision made to extend payment for a specified period if the child is attending school or if he is physically or mentally handicapped. Rates of allowances and the amount of outside income and resources allowed vary by province.

Cost of allowances and services are sharable with the Federal Government under the Canada Assistance Plan (pp. 332-333).

8.—Mothers' Allowances, by Province, as at Mar. 31, 1966 with Totals for 1964-66

Province	Families Assisted	Children Assisted	Payments during the Year Ended Mar. 31	Province	Families Assisted	Children Assisted	Payments during the Year Ended Mar. 31

¹ Includes dependent fathers assisted under the General Welfare Assistance Act.

² An additional 5,163 families with 15,222 children were assisted under Part III of the Public Welfare Act; cost of allowances for this group is not available separately.

³ Caseload merged with social assistance; no separate figures available.

⁴ Exclusive of British Columbia.

Subsection 3.—Living Accommodation for Elderly Persons

In all provinces, homes for the aged and infirm are provided under provincial, municipal or voluntary auspices. These homes are required to meet standards set out in provincial legislation relating to homes for the aged, welfare institutions, or public health. Voluntary homes are usually provincially inspected and in some provinces must be licensed.

All provinces in varying degrees make capital grants toward the construction or renovation of homes for the aged by municipalities or voluntary organizations; and, generally speaking, such homes are exempt from municipal taxation. Some provinces also make provision for capital grants to municipalities, charitable organizations, or non-profit corpora-

tions for the construction of low-rental housing for elderly persons. These projects are usually built under Sect. 16 of the National Housing Act, which provides for long-term low-interest loans to non-profit corporations constructing low-rental self-contained or hostel accommodation for older people. Units for the aged may also be included in low-rental public housing projects for families, built under Sect. 35 of the Act. One province pays annual maintenance grants in respect to each self-contained housing unit and for each bed in an approved special-care home operated under municipal, charitable, or non-profit corporation auspices.

In some provinces efforts are made to place well, elderly people in small proprietary boarding homes. Those who are chronically ill may be cared for in chronic or convalescent hospitals, private or public nursing homes and some homes for the aged. All provinces contribute to the maintenance of needy persons in homes for the aged or other homes for special care, and these costs are shared by the Federal Government under the Canada Assistance Plan (see pp. 332-333).

Subsection 4.—Child Welfare Services

Child welfare services, which include child protection and care, services for unmarried parents and adoption services, are provided in all provinces under provincial legislation. The program may be administered by the provincial authority or the responsibility may be delegated to local children's aid societies (voluntary agencies with boards of directors, operating under charter and under the general supervision of provincial departments). In Newfoundland, Prince Edward Island, New Brunswick, Saskatchewan and Alberta, child welfare services are administered by the province; in Quebec they are administered by recognized voluntary agencies and institutions, religious and secular; in Ontario, a network of local children's aid societies is responsible for the services; in Nova Scotia, Manitoba and British Columbia, services are administered by local children's aid societies in the heavily populated areas and by the province elsewhere.

Children's aid societies and the recognized agencies in Quebec receive substantial provincial grants and sometimes municipal grants and in many areas they also receive support from private subscriptions or from community chests or united funds. Maintenance costs for children in care of a voluntary or public agency, formerly borne by the province or partly by the municipality of residence and partly by the province, are sharable with the Federal Government under the Canada Assistance Plan (pp. 332-333).

Child welfare agencies, provincial or private, have the authority to investigate cases of alleged neglect and, if necessary, to apprehend a child and to bring the case before a judge upon whom rests the responsibility of deciding whether in fact the child is neglected. When neglect is proved, the court may direct that the child be returned to his parent or parents, under supervision, or be made a ward of the province or a children's aid society. Services are provided as appropriate and include services to children in their own homes, care in foster boarding homes or adoption homes, or, for children who need it, in selected institutions. Children placed for adoption may be wards or they may be placed on the written consent of the parent. Adoptions, including those arranged privately, number about 15,500 annually.

Child welfare agencies make use of the small selective institution for placement of children who are forced to be away from their own homes for a short period or who may need preparation for placement in foster homes, and emphasis is increasingly being placed on group-living homes. The development of small, highly specialized institutions, which function as treatment centres for emotionally disturbed children, is of particular significance. Institutions for children are governed by provincial child welfare legislation and by provincial or municipal public health regulations; they are generally subject to inspection and in some provinces to licensing. Sources of income may include private subscriptions, provincial grants, and maintenance payments on behalf of children in care, payable by the parents, the placing agency or the responsible municipal or provincial department.

Services to unmarried parents include casework services to the mother and possibly to the father, legal assistance in obtaining support for the child from the father, and foster-home care or adoption services for the child. Support for unmarried mothers may be obtained under general assistance programs. In many centres, homes for unmarried mothers are operated under private or religious auspices.

Day nurseries for the children of working mothers are established only in the larger centres. These are chiefly under voluntary auspices, except in Ontario, where there are also municipally sponsored day nurseries operated with the aid of provincial grants.

Subsection 5.—Quebec's Family Allowances Program

The Province of Quebec introduced its own family allowances program under legislation enacted in 1967. Under this plan, the following allowances are paid at the end of each six-month period to persons satisfying the relationship and residence requirements in respect of children under 16 years of age: \$15 for one child, \$32.50 for two children, \$52.50 for three children, \$77.50 for four, \$107.50 for five, \$142.50 for six, and an extra \$35 for each child after the sixth. These allowances are increased by \$5 for each child between the ages of 12 and 16 years. To qualify for the allowances, children must be attending school regularly from the time when they are first required to do so, unless prevented by physical or mental infirmity. These allowances supplement those paid under the federal scheme.

Section 4.—International Welfare*

Canada is actively involved in the social welfare and social development work of the United Nations and its Specialized Agencies and of various international voluntary organizations. At the United Nations, Canada is represented on the Economic and Social Council and the Commission for Social Development, is a member of the governing bodies of the United Nations Children's Fund (UNICEF) and the International Labour Organization and actively participates in the work of a number of related organizations such as the Society for International Development and the International Social Security Association. The Department of National Health and Welfare provides representatives to such organizations, participates in international studies and contributes to the development of Canadian policy in this sector.

Under the External Aid Program, Canada supports a number of social welfare projects in developing regions as well as providing social work and social welfare training for foreign students recommended by their governments. The necessary technical services to the bilateral and multilateral aid programs in this sector are supplied by the Department of National Health and Welfare which also works closely with a number of Canadian voluntary organizations engaged in social development, many of which have technical personnel working in the field in addition to the direct assistance which they provide. The Overseas Institute of Canada acts as a clearing house and information centre for the voluntary sector.

PART III.—HEALTH AND SOCIAL WELFARE EXPENDITURES

Section 1.—Government Expenditures on Health and Social Welfare

In the seven years ended Mar. 31, 1961-67, expenditures by all levels of government on health and social welfare rose from \$3,356,800,000 to a record high estimated at \$5,369,500,000, an increase of 60 p.c. If these figures are adjusted to take account of the growth in population, the increase in per capita expenditures—from \$186 to \$266—is about 43 p.c. Government expenditures may also be measured in relation to major economic indicators; on this basis, annual government expenditures on health and social welfare over the 1961-67

* See also pp. 174-179.

period have remained relatively stable, fluctuating between 11.8 p.c. and 12.8 p.c. of net national income and between 8.8 p.c. and 9.6 p.c. of gross national product; for the year ended Mar. 31, 1967, the values were 12.2 p.c. and 9.1 p.c., respectively.

The federal share of health and social welfare expenditures fell from 70.4 p.c. in 1960-61 to 60.7 p.c. in 1966-67, the provincial share rose from 26.4 p.c. to 36.9 p.c. and municipal outlays declined from 3.2 p.c. to 2.4 p.c. The relative federal declines in each of the three years since 1964-65 were caused to a substantial degree by increasing hospital expenditures by the provincial governments, augmented in the last two years by the effect of the 'opting out' arrangements made available to the provinces. Under the Established Programs (Interim Arrangements) Act, a province may opt out of federal-provincial programs, operate and finance these as provincial schemes and receive a tax abatement and an equalization payment from the Federal Government in lieu of a direct federal contribution to the program. This, of course, has the effect of showing an increase in provincial government expenditure while the federal fiscal payment is treated as a transfer payment. Thus, provincial expenditures include gross outlays by the Province of Quebec in respect of programs from which that province opted out, whereas the federal data do not include the large sums paid or transferred to that province under the Established Programs (Interim Arrangements) Act and other agreements. Compared with the previous year, 1965-66, health and social welfare expenditures by all levels of government increased by \$673,700,000 or 14 p.c. Although outlays by all governments increased, provincial expenditures showed the greatest gain. The proportion of government expenditures on health and social welfare taken up by health programs continues to grow; in 1960-61 such programs accounted for \$934,000,000 or 28 p.c. and in 1966-67 for \$2,041,000,000 or 38 p.c.

An outline of the principal components for 1966-67 shows the magnitude of the major programs and services—family allowances payments amounted to \$556,000,000, old age security payments to \$1,033,000,000 plus another \$40,000,000 for three months of the Guaranteed Income Supplement program which began on Jan. 1, 1967, unemployment insurance benefits to \$307,000,000, and veterans pensions and allowances to \$196,000,000 and \$104,000,000, respectively. These income-maintenance programs were entirely the responsibility of the Federal Government. In addition, payments under the youth allowances program, which commenced in September 1964, amounted to \$47,000,000 in 1966-67, excluding the Province of Quebec. That province had instituted a program of schooling allowances three years prior to the introduction of the federal program which necessitated a special arrangement whereby Quebec continued its program but with appropriate fiscal arrangements with the Federal Government.

Federal-provincial income-maintenance programs required expenditures of \$42,000,000 for old age assistance, \$4,600,000 for blindness allowances, \$29,500,000 for disabled persons allowances and \$260,000,000 for unemployment assistance, the latter including some municipal expenditures. Effective Apr. 1, 1965, Quebec withdrew from these federal-provincial programs under the Established Programs (Interim Arrangements) Act which entitled that province to a tax abatement as an equalization payment. Expenditures under the Canada Assistance Plan were estimated at \$60,000,000 in 1966-67. This program was designed to replace the Unemployment Assistance Act, although certain costs not covered by the Plan may continue to be paid under that Act. The Canada Assistance Plan may also replace the old age assistance, blind persons allowances and disabled persons allowances programs at the option of each province (pp. 332-333). Workmen's Compensation Boards spent \$160,000,000 on cash benefits for pensions and compensation. Welfare services for Indians and for veterans and the national employment service accounted for more than \$65,000,000 at the federal level.

In the field of health, federal grants to the provinces under the Hospital Insurance and Diagnostic Services Act totalled almost \$400,000,000 and grants for hospital construction and general health grants to the provinces and municipalities amounted to \$53,000,000. The Federal Government spent \$36,000,000 on its Indian and northern health services and \$55,000,000 on hospital and treatment services for veterans. Provincial expenditures

on hospital care are estimated to have totalled over \$1,100,000,000, and \$200,000,000 was spent on other health services. Workmen's Compensation Boards paid \$70,000,000 for medical aid and hospitalization, and municipal governments spent \$70,000,000 on health.

¹ Estimated.

Section 2.—Expenditures on Personal Health Care

Expenditures on personal health care comprise expenditures of hospitals, amounts received by physicians and dentists for professional services, amounts received by pharmacists for prescription services (i.e. for prescription drugs that are sold in retail drugstores), and an estimate of the amounts that private nurses, chiropractors, osteopaths and optometrists receive for their professional services; they therefore exclude expenditures on public health, capital costs (buildings and interest) and administration costs of public-health programs and of insurance plans.

Table 2 shows the components for each year from 1956 to 1965. Canadians spent a total of \$2,451,300,000 on personal health care in 1965, almost two and a half times as much as in 1956.

Expressed as a proportion of the gross national product, personal health care expenditures rose from 3.2 p.c. in 1956 to 4.7 p.c. in 1965. Expenditure per person over the same period changed from \$61.45 in 1956 to \$124.79 in 1965. Expressed in constant dollars, according to the consumer price index, the expenditure per person increased by 50 p.c. over the same period, or by an average of about 5 p.c. a year.

2.—Expenditures on Personal Health Care, 1956-65

↑
An infant receiving oxygen mixture in the new Charles Camself Hospital for Indians and Eskimos at Edmonton, Alta. The \$7,000,000 hospital, operated by the Department of National Health and Welfare, replaced out-dated facilities in a building constructed in 1910.

An elderly woman being assisted to walk at Island Lodge and Geriatric Centre in Ottawa, a municipally operated institution completed in 1964 to accommodate 260 older persons. →

Larger numbers of children and older persons in the population, as well as new concepts and knowledge in health and welfare matters have contributed greatly to the need for social services and hence to the rapid growth of such services in recent years.

PART IV.—NATIONAL VOLUNTARY HEALTH AND WELFARE ACTIVITIES

A number of national voluntary agencies carry on important work in the provision of health and welfare services, planning research and education, supplementing the services of the federal and provincial authorities in many fields and playing a leading role in stimulating public awareness of health and welfare needs and in promoting action to meet them. The functions of twenty important voluntary agencies are described in the 1962 Year Book at pp. 270-274

Voluntary Medical Insurance.—About 12,010,000 Canadians, or 61 p.c. of the population of Canada, had voluntarily secured some protection against the costs of physicians' services at the end of 1965. This protection was provided by 60 non-profit plans with an enrolment of 6,530,000, and by some 80 private companies giving coverage to an estimated 5,480,000 persons. The total was 5,780,000 above the 1955 figure, which represented only 40 p.c. of the population.

The non-profit plans took in about \$216,800,000 in premiums and \$5,150,000 in other revenue in 1965, paid out \$188,900,000 in benefits and \$14,500,000 for administration, and were left with a surplus of approximately \$18,550,000. Thus, for every dollar of premiums, 87 cents were paid out in benefits, which amounted to approximately \$28.93 per person covered. In 1955, benefit payments had been \$41,400,000, representing 89 cents of the premium dollar and amounting to only \$13.17 per person.

Profit-making private companies wrote \$146,200,000 of premiums for health protection in 1965; they paid out \$113,300,000 in claims.

PART V.—VETERANS SERVICES*

The Department of Veterans Affairs administers most of the legislation known collectively as the Veterans Charter and also provides administrative facilities for the Canadian Pension Commission, which administers the Pension Act and Parts I to X of the Civilian War Pensions and Allowances Act; for the War Veterans Allowance Board, which administers the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act; and for the Secretary General (Canada) of the Commonwealth War Graves Commission.

The principal benefits now available to veterans are medical treatment for those eligible to receive it, land settlement and home construction assistance, educational assistance for the children of the war dead, veterans insurance, general welfare services, unused re-establishment credit, disability and dependants pensions and war veterans allowances. The work of the Department, except the administration of the Veterans' Land Act, is carried out through 18 district offices and four sub-district offices in Canada and one district office in England; the benefits of the Veterans' Land Act are administered through seven regional offices and 26 district offices across Canada.

Canada's war dead continue to be remembered by departmental memorial ceremonies in many parts of the world—in Hong Kong, Japan and Korea in December 1966; at the Vimy Memorial in France on the fiftieth anniversary of the battle of Vimy Ridge, Apr. 9, 1917; and at Dieppe, France, for the twenty-fifth anniversary of the Aug. 19, 1942, raid. The week of June 11-17, 1967, was celebrated across Canada as National Veterans' Week by the Government and by veterans' organizations. One of the national highlights was a dinner given by His Excellency the Governor General in honour of Canada's most distinguished war heroes, the winners of the Victoria Cross and the George Cross.

* Prepared by the Department of Veterans Affairs, Ottawa.

Section 1.—Pensions and Allowances

Disability and Dependants Pensions

Canadian Pension Commission.—The Canadian Pension Commission administers the Pension Act (RSC 1952, c. 207, as amended) and Parts I to X of the Civilian War Pensions and Allowances Act (RSC 1952, c. 51, as amended). The members of the Commission are appointed by the Governor in Council who may also impose upon the Commission duties in respect of any grants in the nature of pensions, etc., made under any statute other than the Pension Act. It reports to Parliament through the Minister of Veterans Affairs. The Commission has district offices in principal cities across Canada with a Senior Pension Medical Examiner in charge.

The Pension Act.—Previous issues of the Year Book contain information on the development of Canadian pension legislation together with yearly statistics of numbers and liabilities.

The Pension Act makes provision for the payment of pensions in respect of disability or death resulting from injury or disease incurred during or attributable to service with the Canadian Forces or the Naval, Army or Air Forces of Canada in time of war or peace. Provision is also made for supplementing, up to Canadian rates, awards of pension to or in respect of Canadians for disability or death suffered as a result of service in the British or Allied Forces during World War I or World War II, or payment of pension at Canadian rates in cases where the claim has been rejected by the government of the country concerned.

Federal legislation assented to Nov. 30, 1966 (SC 1966-67, c. 55), provided an increase of 15 p.c. in the basic rate of disability pension, retroactive to Sept. 1, 1966; the rate for a 100-p.c. disability was increased from \$2,400 to \$2,760 a year. The legislation also provided an increase in pension for widows of all ranks up to and including that of Colonel, from \$1,824 to \$2,100 a year. The statutory rates of pension with respect to other awards under the Pension Act remained the same.

The previous basic rate of disability pension was applicable to all ranks up to and including that of Colonel. Since the new rate is slightly higher than the rate for ranks higher than Colonel, the increase has the effect of making disability pension payable at the same rate for all ranks. The annual rates for a 100-p.c. disability for all ranks are:—

	\$
Pensioner.....	2,760
Wife.....	768
One child.....	360
Two children.....	624
Each additional child.....	216

For assessments lower than 100-p.c., the awards are proportionately less. Attendance allowance, which is payable to a pensioner who is totally disabled, helpless and in need of attendance, and which varies from a minimum of \$480 to a maximum of \$3,000 a year depending on the degree of attendance required, is paid in addition to pension. Although a pensioner must be totally disabled to receive this allowance, the disability resulting in the need of attendance may be non-pensionable.

The annual rates of pension for widows and children of all ranks up to and including that of Colonel and equivalent are:—

	\$
Widow.....	2,100
One child.....	720
Two children.....	1,248
Each additional child.....	432

Rates for widows are slightly higher if the deceased held a rank higher than that of Colonel or equivalent rank, the annual rate being \$2,160, but those for children remain the same for all ranks.

The Civilian War Pensions and Allowances Act, Parts I to X, provides for the payment of pensions to or on behalf of persons who served in certain civilian groups that were closely associated with the war effort during World War II and who suffered injury or death as a result of such service; these include merchant seamen, saltwater fishermen, auxiliary services personnel, ferry pilots of the RAF Transport Command, firefighters who served in Britain, etc.

1.—Pensions in Force under the Pension Act, as at Dec. 31, 1966

Service	Disability		Dependant		Disability and Dependant	
	Pensions in Force	Liability	Pensions in Force	Liability	Pensions in Force	Liability
	No.	\$	No.	\$	No.	\$

War Veterans Allowances and Civilian War Allowances

War Veterans Allowance Board.—The War Veterans Allowance Board is a quasi-judicial body consisting, at present, of nine members appointed by the Governor in Council. The Board administers the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act and reports to Parliament through the Minister of Veterans Affairs. The Board acts as an appeal court for an applicant or recipient aggrieved by a decision of a District Authority and may, on its own motion, review and alter or reverse any adjudication of a District Authority. The Board is also responsible for instructing and guiding the District Authorities in the interpretation of policy and for advising the Minister with respect to Regulations concerning the administration of the Act.

War Veterans Allowance District Authorities.—In 1950, 18 District Authorities were established in the regional districts of the Department of Veterans Affairs and granted full power to adjudicate on all matters arising under the War Veterans Allowance Act. In 1960, a separate Authority, the Foreign Countries District Authority, located in Ottawa, was established to look after recipients living outside Canada. The members of a District Authority are employees of the Department of Veterans Affairs, appointed by the Minister with the approval of the Governor in Council.

War Veterans Allowances.—The purpose of the War Veterans Allowance Act, 1952, as amended, is to provide an allowance to otherwise qualified war veterans who, because of age or infirmity, are no longer able to derive their maintenance from employment and to ensure that their income does not fall below the scale specified in the Schedule to the Act. Widows and orphans of qualified veterans are eligible for benefits. Since its inception in 1930, the Act has been amended 14 times to meet additional needs of veterans

and their dependants. The most recent amendment (SC 1966-67, c. 55) increased monthly rates and annual income ceilings, effective Sept. 1, 1966. The monthly rates and the maximum total annual income ceilings are:—

<u>Item</u>	<u>Monthly Rate</u>	<u>Annual Income Ceiling¹</u>
	\$	\$
Single.....	105	1,740
Married.....	175	2,940
One orphan.....	60	1,005
Two orphans.....	105	1,605
Three or more orphans.....	141	2,016

¹ Where a recipient or spouse is blind, the income ceiling is \$120 higher.

At Mar. 31, 1967, there were 86,242 recipients of War Veterans Allowances, made up of 55,131 veterans, 30,793 widows and 318 orphans; 616 of the total resided outside Canada. The annual liability for all recipients was \$105,993,313.

Civilian War Pensions and Allowances.—Part XI of the Civilian War Pensions and Allowances Act makes available to certain groups of civilians, their widows and orphans, benefits similar to those available to veterans under the War Veterans Allowance Act. These groups, which performed meritorious service in World War I or World War II, are: Canadian merchant seamen of both Wars; non-Canadians who served on Canadian merchant ships in either War; Canadian voluntary aid detachments of World War I; Canadian firefighters of World War II; Canadian welfare workers of World War II; Canadian transatlantic aircrew of World War II; and Newfoundland Overseas Forestry Unit of World War II. Service for at least six months at sea or overseas in the group concerned is the prime requisite for eligibility as to service. VADs in World War I are required to have served on the Continent of Europe or for at least 365 days in Britain prior to the Armistice. A pensioner under Parts I to X of the Act is also eligible. The monthly rates and the maximum total annual income ceilings are identical to those in the War Veterans Allowance Act. At Mar. 31, 1967, there were 1,215 civilians, 301 widows and five orphans in receipt of Civilian War Allowances, a total of 1,521 recipients of whom seven were residing outside Canada. The annual liability was \$2,253,359.

Veterans' Bureau

The Veterans' Bureau, which is a branch of the Department of Veterans Affairs, assists former members of the Armed Forces and their dependants and former members of the various auxiliary organizations in preparing and presenting claims to the Canadian Pension Commission; it has been in operation for 36 years. The Chief Pensions Advocate, who heads the Bureau at Ottawa, is assisted by pensions advocates, most of whom are lawyers located in the departmental district offices. The pensions advocates appear as counsel for applicants before Appeal Boards of the Commission and, in addition, advise pensioners and applicants upon any provision of the Pension Act or phase of pension law or administration that may have a bearing on pension claims. No charge is made for the services of the Bureau.

During 1966, the Veterans' Bureau submitted 6,988 claims to the Canadian Pension Commission for adjudication, of which 33 p.c. were wholly or partially granted. These included 1,187 claims presented to Appeal Boards of the Commission. During the year, 1,530 straight entitlement claims were submitted to the Commission, based on service in World War I and peacetime, of which 244 were wholly or partially granted; claims based on service in World War II, Korea and Special Duty Areas numbered 3,247, of which 953 were wholly or partially granted; and of the 1,024 miscellaneous claims submitted, 622 were wholly or partially granted.

Section 2.—Welfare Services

Welfare services for veterans and, where appropriate, their dependants are provided by the Welfare Services Branch. These include the administration of assigned statutes; the conducting of field work and reporting for other branches of the Department, the Canadian Pension Commission, the War Veterans Allowance Board and Services Benevolent Funds; and the provision of a rehabilitation and welfare program of advice and counselling including referral, where indicated, to other public or private agencies, veterans organizations, etc.

War Service Grants.—War service gratuities payable under the War Service Grants Act to veterans of World War II and the operations to restore peace in Korea are now payable only in cases where delayed application is acceptable. Re-establishment credit payable under the same Act is available up to Oct. 31, 1968. Payment of the credit, except for a balance of \$50 or less, is not made in cash to the veteran but is released on his behalf for specified purposes. Up to the end of 1966 a total of \$315,409,729 had been paid out and unused balances amounted to \$8,520,517. During 1966 the total paid out amounted to \$188,897 made up of \$91,522 for purchases of homes and for repairs and furniture; \$17,151 for purchases of businesses, tools and equipment; and \$80,224 for miscellaneous items such as insurance, special equipment for training, clothing, etc.

Assistance Fund.—Recipients of benefits under the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act living in Canada may be given help from the Assistance Fund if their total income is lower than the permitted maximum. Assistance may take the form of a monthly supplement based on shelter, fuel, food, clothing, personal care and specified health costs or of a single award to meet an unusual or emergency need. The number of persons assisted during 1966 was 21,837, the number in receipt of monthly supplements at the end of the year was 15,135 and the Fund expenditures for the year amounted to \$5,929,316; comparable figures for 1965 were 21,050, 15,736, and \$5,489,826.

Education Assistance to Children.—The Children of War Dead (Education Assistance) Act provides help in the form of allowances and the payment of fees for the post-secondary education of children of those whose deaths have been attributed to military service. Assistance is restricted to children attending, in Canada, educational institutions which require secondary school graduation, matriculation or equivalent standing for admission. These include, in addition to universities and colleges, such facilities as hospital schools of teaching and institutes of technology. From its inception in July 1953 to the end of 1966, expenditures totalled \$6,243,506, of which \$3,288,745 was spent in allowances and \$2,954,761 in fees. By the end of 1966, 4,129 children of Canada's war dead had been approved for training. Of these, 1,612 had successfully completed training—229 had obtained degrees in arts and science, 287 in education, 109 in engineering and applied science, 37 in social work, 25 in medicine, 27 in law, 108 in other university faculties, 391 in nursing, 219 in teaching and 181 in administrative and technological fields. At the same date there were 645 university undergraduates and 227 students in non-university courses receiving assistance.

Veterans Insurance.—The Returned Soldiers Insurance Act (SC 1920, c. 54 as amended) provides eligibility to contract for life insurance with the Federal Government up to a maximum of \$5,000 to any one veteran of World War I. No policies were issued after Aug. 31, 1933. There were 48,319 policies issued during the eight years in which the Act was open amounting to \$109,299,500 and, of these, there were 6,124 in force with a value of \$13,152,060 on Dec. 31, 1966.

The Veterans Insurance Act (RSC 1952, c. 279 as amended) enables veterans following their discharge and widows of those who died during World War II service to contract with the Federal Government for a maximum of \$10,000 life insurance. Veterans with

active service in Korea were extended eligibility by virtue of the Veterans Benefit Act 1954. The period of eligibility to apply for this insurance will cease Oct. 31, 1968. To Dec. 31, 1966, 55,766 policies in the amount of \$183,753,500 had been issued and, of these 27,285 policies with a value of \$87,039,099 were in force.

Rehabilitation and Welfare.—Welfare officers at Departmental District Offices work closely with other branches of the Department, with other public agencies at all levels and with private agencies and organizations in assisting veterans and their dependants to deal with problems of social adjustment, particularly those associated with physical disabilities or the disabilities of increasing age. The latter occur more frequently, of course, as the age of the veteran population increases. The Department operates a complete program of university, vocational, technical and home training, with allowances, for disabled pensioned veterans. Vocational rehabilitation is also promoted by training assistance available through close collaboration with the federal Department of Manpower and Immigration and provincial rehabilitation and re-training facilities. Academic, vocational and technical correspondence courses are available to all veterans of the Canadian Forces who served in World War I, World War II and Korea, provided they reside in Canada. By mutual agreements, these courses are purchased by the Department from Provincial Departments of Education. Sheltered workshops operated at Toronto and Montreal and home assembly work in other centres produce poppies and memorial wreaths and crosses associated with Remembrance Day observances. Finished products are sold to the Dominion Command of the Royal Canadian Legion.

Section 3.—Treatment Services

Treatment Activity.—The Treatment Services Branch of the Department of Veterans Affairs provides medical, dental and prosthetic services for entitled veterans throughout Canada as authorized by the Veterans Treatment Regulations. Service is also provided for members of the Armed Forces, the Royal Canadian Mounted Police, and the wards of other governments or departments at the request and expense of the authorities concerned.

It is the responsibility of the Branch to provide examination and treatment to disabled pensioners for their pensionable disabilities, and to provide treatment to war veterans allowance recipients (but not their dependants), veterans whose service and need make them eligible for domiciliary care, and veterans whose service and financial circumstances render them eligible for free treatment or at a cost adjusted to their ability to pay. If a bed is available, any veteran may receive treatment in a Departmental hospital on a guarantee of payment of the cost of hospitalization. The pensioner receives treatment for his pensionable disabilities regardless of his place of residence but service to other veterans is available in Canada only. Where Departmental facilities are not readily accessible, an eligible veteran may obtain treatment at the expense of the Department in an outside hospital from a doctor of his choice.

Under the federal-provincial hospital insurance program, DVA hospitals are recognized for the provision of insured services to veterans. Any necessary premiums are paid on behalf of veterans in receipt of war veterans allowance. The Veterans Treatment Regulations remain the authority for the treatment of veterans (and others) in DVA institutions and elsewhere under Departmental responsibility, regardless of whether or not the hospitalization is at the expense of the insurance plan.

Hospital Facilities.—Treatment is provided in 10 active-treatment hospitals located at Halifax, N.S.; Saint John, N.B.; Quebec City, Montreal and Ste. Anne de Bellevue, Que.; London, Ont.; Winnipeg, Man.; Calgary, Alta.; and Vancouver and Victoria, B.C.; and in three domiciliary care homes at Ottawa, Ont.; Saskatoon, Sask.; and Edmonton, Alta. The rated bed capacity of these institutions at Dec. 31, 1966 was 6,910 beds. It should also be noted that in Ottawa both acute and chronic cases that require definitive

treatment are admitted to the National Defence Medical Centre. A veterans pavilion of 67 beds is located at the St. John's General Hospital, St. John's, Nfld. Sunnybrook Hospital was transferred to the University of Toronto in 1966 but 1,200 beds are still available for the priority use of veterans. An additional 565 priority beds are available for veterans in community hospitals located in St. John's, Nfld.; Charlottetown, P.E.I.; Kingston and Port Arthur, Ont.; Regina and Saskatoon, Sask.; and Edmonton, Alta.

Medical Staff and Training Programs.—Many of the professional staffs of Departmental active-treatment hospitals are employed on a part-time basis; in the main they are recommended for appointment by the Deans of Medicine of the universities with which the hospitals are affiliated. Most members of the medical staffs are engaged in teaching and private practice and hold appointments on the medical faculties of the various universities. In the active-treatment institutions, medical teaching programs are maintained, which are considered essential to attract highly qualified professional men and thus ensure the highest quality of medical care. All active-treatment hospitals have been approved by the Royal College of Physicians and Surgeons of Canada for postgraduate teaching in medicine and surgery, and the majority are also approved for advanced postgraduate training in various other specialties. An extensive resident program is in effect in the medical specialties as well as in other fields such as physiotherapy, occupational therapy, dietary, psychology and medical social services. A school for the training of nursing assistants, operated at Camp Hill Hospital in Halifax, has an annual capacity of 70 and graduates are offered employment in other Departmental hospitals. A program of postgraduate and continuing education in pharmacy is conducted, in conjunction with the School of Pharmacy of the University of Toronto, at Westminster Hospital, London, Ont.

Medical Research.—During 1966, there were 90 projects in progress under the clinical research program. This program is varied but in the main deals with conditions affecting aging, which the Department is in a special position to investigate. Self-contained clinical investigation units are established in active-treatment hospitals located at Montreal, London, Winnipeg and Vancouver.

Section 4.—Land Settlement and House Construction

The Veterans' Land Act, enacted in 1942 and broadened extensively in its scope and financial provisions since then, provides financial, technical and supervisory assistance to World War II and Korean Force veterans to enable them to engage in agriculture or commercial fishing on a full-time or part-time basis; to acquire, build or improve homes; and to settle on provincial, federal and Indian reserve lands. Pursuant to the latest amendments made to the Act in June 1965, loans may be made of up to \$40,000 for full-time farmers on economic farm units, to \$18,000 for small family farmers, to \$16,000 for small holders (part-time farmers) and to \$18,000 for veterans building houses on city-size lots. The financial assistance available under the Act is comparable to that available to non-veterans under the Farm Credit Act and the National Housing Act.

Since inception and up to Dec. 31, 1966, 105,667 veterans were settled under the provisions of the Act. Of this total, 30,741 were established as full-time farmers, 62,055 as small holders, 5,596 as Crown land settlers, 1,345 as commercial fishermen, 1,678 Indian veterans were established on reservations and 4,252 veterans acted as their own contractors in building homes on city-size lots. Subsequent to settlement, 13,905 farmers and 9,147 small holders and commercial fishermen were provided with additional financial assistance. In 1966, over \$87,500,000 was approved on behalf of 9,118 veterans. From the commencement of operations to the end of 1966, nearly \$760,000,000 was spent on repayable loans, advances and non-repayable grants. As at Dec. 31, 1966, nearly 56,200 veterans had earned conditional grants in excess of \$101,000,000. Since inception and up to the end of

1966, 32,899 of the veterans who had earned grants successfully concluded their settlement contracts—12,026 farmers, 14,686 small holders, 452 commercial fishermen, 4,325 Crown land settlers and 1,410 Indian veterans residing on reservations.

Advisory, supervisory and appraisal field services are provided by a staff of field officers who are highly trained in the techniques pertaining to agriculture, construction and land appraisal. During 1966, 5,998 properties were appraised, exclusive of more than 100 appraisal assignments carried out on behalf of other government departments and agencies. Altogether, 1,239 new houses were started—1,026 small holdings and for commercial fishermen, 152 farm homes, and 61 on city-size lots—and 1,001 new houses were completed. Five construction schools were organized which were attended by 247 veterans.

Continued interest is shown in the Veterans' Land Act group life insurance. By Dec. 31, 1966, 9,065 veterans were insured for almost \$75,000,000. Since the group plan was first introduced, 48 insured veterans have died and \$287,000 has been paid to retire their indebtedness.

Veterans continue to maintain a favourable record of repayment. Instalments falling due in 1966 amounted to over \$21,000,000, excluding share-of-crop payments. During the year, over 97 p.c. of the total amount due was collected and the 1,234 veterans under share-of-crop agreements paid over \$1,600,000.

2.—Summary of Operations under the Veterans' Land Act, as at Dec. 31, 1966

Item	Full-Time Farming	Small Holding	Commercial Fishing	Provincial Lands	Federal Lands	Indian Reserves	City-Size Lots	Total

¹ Includes 1,413 civilian purchaser accounts.

Section 5.—Commonwealth War Graves Commission

The current Charters of the Commonwealth War Graves Commission consist of two documents—the Original Charter of Incorporation dated May 21, 1917, and the new Supplemental Charter dated June 8, 1964. Under these Charters the Commission is entrusted with the marking and maintenance in perpetuity of the graves of those of the British Empire and Commonwealth Armed Forces who lost their lives between Aug. 4, 1914, and Aug. 31, 1921, and between Sept. 3, 1939, and Dec. 31, 1947, and with the erection of memorials to commemorate those with no known grave.

The Canadian High Commissioner in London, England, is the official Commission member for Canada, the Minister of Veterans Affairs is the Agent of the Commission in Canada, and the office of the Secretary-General of the Canadian Agency is in the Veterans Affairs Building Ottawa.

A message conveying the congratulations and support of the Government and the people of Canada to the Commonwealth War Graves Commission on the fiftieth anniversary of the Commission was read at a special meeting on May 18, 1967, presided over by His Royal Highness the Duke of Gloucester, President of the Commission, which took place at St. James's Palace, London, England.

PART I.—FORMAL EDUCATION*

Section 1.—The Current Education Situation

The Canadian education scene in the mid-1960s continues to be dominated by the need for the development of ever greater knowledge, skills, understanding and appreciation among the nation's youth in order to prepare them, individually and as a community, for the challenges they are expected to face in the future. It is widely recognized that this need should be met not only by developing still further the élite at the top of the academic pyramid but also by extending the base to include all young persons, whatever their abilities and aptitudes and whatever their social circumstances and financial resources.

The findings of systematic research as well as the sometimes bitter experiences of schoolmen have brought about an increased realization of the great diversity in aptitude patterns among young people. If all are to be educated so that individual potential may be fully realized, it follows that there must be an equal diversity in the programs of study or training. Facilities for those of academic and scholarly inclination have existed for many years so that recent emphasis has been placed upon the provision of programs suited to those of more practical bent and to the introduction of other measures designed to hold students within the formal education systems to ever-increasing levels of age and attainment. The modern-day labour force has little use for the untrained and poorly educated young person but is greatly in need of qualified tradesmen, technicians and professionals. For this reason there has been an upsurge in the building of vocational and composite schools, the establishment of community colleges and the introduction of policies and practices to cope more adequately with individual differences, such as non-graded systems, subject-promotion schemes and the extension of guidance facilities.

Efforts are also being made to overcome the financial barriers to continuing education. The investigations of demographers and sociologists are confirming and quantifying the long-held suspicions that financial constraints are operating to deny education to many

* Revised in the Education Division, Dominion Bureau of Statistics.

Canadians who could profit from it. Various methods are therefore being sought to lighten the financial burden upon the individual and to equalize the rapidly increasing load being carried by the taxpayer. It is now evident that the Federal Government has a key role to play in this matter, particularly in adult technical and vocational training and in university education—both matters of prime concern to the nation as a whole. Acknowledgment of this fact is to be seen in the increasing activities of the federal Department of Manpower and Immigration, the formation of a federal office to deal with higher education, the founding of a nation-wide Service for Admission to Colleges and Universities, the holding of an interprovincial Ministers' conference on education and manpower, and renewed attempts to introduce uniform methods of statistical reporting.

Thus it appears that ethical considerations concerning the duties of society in the satisfaction of the personal needs of the individual and economic considerations concerning the kinds of individuals required to satisfy the manpower needs of society are combining to encourage the extension and equalization of educational opportunity. The rising costs of this endeavour are causing a reappraisal of traditional methods of financing education, tending toward the assumption of increasing proportions of the load by higher levels of government. Taken along with other developments in the economic, social and cultural life of the community, this is resulting in the emergence of the federal authority as an important partner in the task of providing for the education of Canadians.

Section 2.—Administration and Organization of Education

Responsibility for Education in Canada

Canada is a federal state, in which responsibility for the organization and administration of public education is exercised by the provincial governments. The Federal Government is directly concerned only with the provision of education for certain special groups—some 64,500 Indian and 3,300 Eskimo children of school age, other children in the Territories, inmates of federal penitentiaries and families of members of the Armed Forces on military stations (although whenever possible provincial educational facilities are used). In addition, the Federal Government makes grants for adult vocational training, provides per capita grants to each province to be divided among its universities and colleges, participates to a considerable extent in informal education and makes grants-in-aid for research personnel and equipment that assist educational institutions indirectly.

Because each of the ten provinces has the authority and responsibility for organizing its education system as it sees fit, organization, policies and practices differ from province to province. Each has a department of education, headed by a minister who is a member of the Cabinet. Ontario has, in addition, a Department of University Affairs under its Minister of Education. Each department is administered by a deputy minister, or director, who is a professional educationist and a public servant. He advises the minister, supervises the department and gives a measure of permanency to its education policy, in general carries out that policy, and is responsible for the enforcement of the Public School Act. The department of education usually also includes: a chief inspector of schools and his staff of local inspectors; directors or supervisors of curricula, technical education, teacher training, home economics, guidance, physical education, audio-visual education, correspondence instruction and adult education; directors or supervisors of other sections (according to the needs of the particular province); and technical personnel and clerks. Quebec operates a dual system, with an associate deputy minister for each of the Roman Catholic and Protestant sectors. In Newfoundland, which has a public denominational system, there is a superintendent for each one of the five denominations recognized by the School Act.

Other provincial departments having some responsibility for operating school programs are: departments of labour, which operate apprenticeship programs; agriculture depart-

ments, which operate agriculture schools; departments of the attorney-general or of welfare, which operate reform schools; and departments of lands and forests, which operate forest ranger schools.

From the beginning, each department of education has undertaken, among other things, to provide: (1) inspection services to ensure maintenance of standards; (2) the training and certification of teachers; (3) courses of study and lists of prescribed or approved textbooks; (4) financial assistance to local authorities in the construction and operation of schools; and (5) regulations for the guidance of trustees and teachers. In return, each department requires regular reports from the schools. When first introduced, government grants to schools were based on such factors as the number of teachers, enrolment, days in session and attendance. Somewhat later, special grants were introduced in most provinces to meet a variety of expenses, such as the construction of the first school, the organizing of special classes, providing transportation for pupils, school lunches and other contingencies. A number of provinces made provision for equalization grants, and now the majority have a foundation program of one kind or another.

The work of the departments of education has grown considerably. Many have expanded their services in the fields of health, audio-visual aids, art, music, agriculture, special education, correspondence courses and prevocational and trade courses. At the same time there has been an increasing delegation of authority to local boards and school staffs. One illustration of this tendency is a reduction in the number of departmental (external) year-end examinations. Few provinces now provide for more than one or two such examinations—at the end of the final and, in some cases, also at the end of the second last year of the secondary school course. Another illustration is the increasing use of approved lists of textbooks from which local authorities may make their own choice, instead of lists of prescribed texts. Courses of study are now seldom planned only by one or two experts in the department; instead they result from conferences and workshops including active teachers and other interested individuals or bodies. In most provinces "curriculum construction" is considered to be a continuous procedure.

Local Units of Administration

In all provinces, school laws provide for the establishment and operation of schools by local education authorities, which operate under the Public School Act and are held responsible to the provincial government and resident ratepayers for the actual operation of the local schools. Through the delegation of authority, education becomes a provincial-local partnership with the degree of decentralization reviewed intermittently. Questions concerning the allocation of responsibilities between the provincial and local authorities will probably occupy the minds of Canadians for decades to come, as well as problems such as the optimum size of administrative units, schools and classes.

At one time, the provincial departments delegated authority to publicly elected or appointed boards, which functioned as corporations under the School Acts and regulations. These three-man boards were expected to establish and maintain a school, select a qualified teacher and prepare a budget for presentation to the municipal authorities. As towns and cities developed, the original boards remained as units but provision was made in the legislation for urban school boards with more members and generally (although not always) with responsibility for both the elementary and secondary schools.

Rural school districts were typically about four miles square, their size determined largely by the need for the school to be within walking distance of the homes it served. As time went by, the realization grew that the manner of living was changing, that farms were becoming much larger and more mechanized, that most farmers had trucks and automobiles, that there were fewer children to the square mile and that it would be more efficient and economical to provide central schools and transportation. There was also considerable discontent among the teachers, as security of tenure was rarely found under the three-man local school boards. Further, the shortage of teachers, differences among the districts in their ability to pay for education, and a demand for secondary school facilities in rural areas all combined to force the establishment of larger administrative units.

Under provincial legislation, larger units are now in effect in Nova Scotia, New Brunswick, Saskatchewan, Alberta and British Columbia, and their establishment is being encouraged and promoted in Newfoundland, Prince Edward Island and Manitoba. (Newfoundland is a somewhat special case in which the denominational school districts, already rather large geographically, are proceeding toward some kind of amalgamation of provision of joint services.) Ontario has abolished the local school sections in favour of township school areas and is now beginning to promote reorganization into county units with responsibility for both elementary and secondary education. In Quebec, the greater part of the Protestant system is organized into larger units and the Catholic system has reorganized its administrative structure (for secondary education) into 55 regions.

In some provinces the local boards disappeared when the larger units were formed; in others they were retained with limited powers and duties. The larger unit boards accept responsibility for providing the necessary staff, buildings, equipment and transportation. Where local boards remain, they usually function in an advisory capacity and look after the buildings and grounds.

Elementary and Secondary Education

Enrolment in elementary and secondary schools has been increasing year by year until, in 1965-66, there were 4,893,000 pupils enrolled in public and separate schools, 195,000 in private schools and 216,000 full-time students in various vocational schools and courses, both public and private.

Each September, most Canadian children of age six enter an eight-grade elementary school. At about 14 years of age, nearly 90 p.c. of those who entered grade 1 enter a regular four- or five-year secondary school. From the graduates at this level a limited number—about 13 p.c. of those who began school—go on to college or university where rather more than half of them pursue a three- or four-year program leading to a bachelor degree in arts or science and the remainder enrol in various professional courses such as commerce, education, engineering, law, medicine, theology, etc.

The 8-4 plan leading from grade 1 to university was for many years the basic plan for organizing the curriculum and schools, other than those of Catholic Quebec. This plan, although still followed in some rural, village, town and city schools, has been modified from time to time in various provinces, cities or groups of schools, as it appeared inadequate to meet the demands arising from new aims of education. There are a number of variants to be found at present in Canada: the addition of one or even two kindergarten years at the beginning of the system; the addition of an extra year to high school, providing five rather than four years of secondary schooling; the introduction of junior high schools, changing the organization to a 6-3-3 or 6-3-4 plan; or again, the combining of the first six years of elementary school into two units, each designed to reach certain specified goals during a three-year period. A fairly recent innovation is the establishment of junior colleges, affiliated with universities, in which the last one or two years of high school and the first one or two years of college are offered.

The first secondary schools were predominantly academic and prepared their pupils for entry into university. Until recent years, vocational schools were to be found only in the large cities, although schools in some of the smaller centres did provide a few commercial and technical subjects as options in the academic curriculum. Today, besides commercial and vocational high schools, there are, in increasing number, composite and regional high schools that provide courses in home economics, agriculture, shop-work and commercial subjects as well as in the regular secondary school subjects. The number of subjects offered has also increased greatly and the number of options available, particularly in certain provinces, provides a wide choice for pupils with a great variety of abilities and aims. Three programs can frequently be distinguished—the university entrance course, the general course for those who wish to complete an academic type of program before entering employment, and vocational courses for those who wish to enter skilled trades. Thus, attention is given to the minority who will go on to institutions of higher learning,

while the majority, who will look for jobs, are prepared for entry to their chosen occupation. Considerable emphasis has been placed on music, art, physical education, guidance and group activities but not at the expense of the basic subjects that provide a general foundation.

Education in the Catholic Schools of Quebec

Although Catholic education in Quebec has been considered sufficiently different to warrant a separate description, it is conducted after much the same fashion as education in the other provinces. All types of schools familiar to Canadians elsewhere are to be found in Quebec, including ungraded rural elementary schools, graded urban schools, secondary schools with academic bias, vocational schools and, at the top, universities. The administrative structure of school boards, inspectors and central departmental officials is also broadly similar. Such differences as exist are of historical origin and arise out of the traditional French-Canadian conception of education, which involved the belief that the greatest contribution by French Canadians to Canada's future could be made by preserving their language and culture, that religion should be an integral part of education, that boys and girls were best educated separately, that education was a privilege and that those who were considering entering the professions might make such a decision at the end of the elementary school. Education was regarded as a means of producing good citizens by training boys to become bread-winners and girls to become home-makers.

A unique feature of the Quebec Catholic system is the existence of the *collèges classiques* which, operated by religious orders, serve by affiliation as the arts faculties of the French-language universities. They accept students who have completed grade 7 and provide an eight-year course leading to the *baccalauréat* and entrance to certain university faculties. Out of the scholarly traditions of this system has arisen the cultural and professional élite in law, medicine, theology and the arts in French Canada.

The political, social and economic ferment of the present decade is being reflected in education and is resulting in rapid and complex changes in the organizational structure and in curriculum content. Government functions previously scattered among several departments have been brought together under a new department of education, created in 1964. The new department took upon itself the task of completely reorganizing education in the province, introducing new policies and practices, many of them on the recommendation of the Royal Commission on Education, established in 1961 under the chairmanship of Monsignor Alphonse-Marie Parent. The assessment of resources required to meet present and future needs was seen as one of the prime tasks; a directorate of planning was set up and newly created regional school commissions were assigned planning functions. It was evident that Quebec was behind most other provinces in the provision of education for a technological age, and so the early concern has been with the expansion of facilities for relating the educational process to the world of work—the building of school plant, the establishment of consultative committees with the trades and professions, and the promotion of guidance and counselling in the schools.

Regulations have been announced providing for the introduction of a six-year elementary program, in general with promotion according to age, and a five-year secondary course with a highly diversified curriculum and a subject-promotion scheme. Pre-university and professional education is to be offered for a further two and sometimes three years at special institutes to be established for the purpose. Other major changes involve the departmental examinations system, teacher training, the establishment of regional offices of the department, and many financial provisions, including arrangements with private schools for the payment of fees and increased availability of bursaries and scholarships.

Newfoundland.—The topographical and economic circumstances of the Island influenced the development of education as did pockets of settlers establishing themselves in outposts which were relatively self-sufficient. Active leadership of the churches and homogeneity of the village populations provided a minimum of overlapping of denominations

except in a few industrial areas or the larger cities. A Royal Commission is considering the efficiency of the present organization with a view to increasing the education level of the Island's population.

The present system is predominantly denominational although there are amalgamated and community schools operated by the Department of Education. The schools are administered on a local basis by the five largest denominational groups—Roman Catholic, Anglican, United Church, Salvation Army and Pentecostal Mission. These operate under five superintendents, each in charge of the schools of his faith, and a member of the Department. Local boards, including the local clergymen as members, select teachers, pay salaries from government grants and look after the school property. All schools follow the provincial course of study and examinations, scholarships and diplomas are determined by an interdenominational body representing the major denominations and the Department.

Education in the Yukon and Northwest Territories.—In the Yukon Territory, the school system is operated by the Territorial Government through a superintendent and staff at Whitehorse responsible to the Commissioner of the Territory who, in turn, receives instructions from the Minister of Indian Affairs and Northern Development in Ottawa. The Education Division of the Northern Administration Branch of the Department of Indian Affairs and Northern Development offers advice on education policy to the Minister and Territorial authorities. All schools, both public and separate, with the exception of the Carcross Indian Residential School (operated by the Department in co-operation with the Territorial Government) and St. Mary's School (a quasi-private school operated by the Roman Catholic Church in Dawson) come under the direct ownership and operation of the Government of the Yukon Territory. Although there is provision for three types of schools in the Yukon—public, separate and Indian—most of the Indian children attend either the public or the separate schools. In 1965, the population was 15,000 of whom 2,400 were Indians. By choice, the schools of the Yukon follow the British Columbia education curricula.

In the Northwest Territories (the Districts of Mackenzie, Franklin and Keewatin) the school system is operated by the Education Division of the Northern Administration Branch of the Department of Indian Affairs and Northern Development by agreement with the Government of the Northwest Territories. The Federal Government, as the operating agency, finances school operation and receives from the Territorial Government the pupil cost for pupils who are neither Indian nor Eskimo. Enrolment for the 1966-67 term included 3,340 Eskimos, 1,371 Indians and 3,081 others, a total of 7,792 in the Northwest Territories and Arctic Quebec combined. Yellowknife public and separate school districts and Hay River separate school district are financed partly by local taxation and partly through grants-in-aid from the Federal and Northwest Territorial Governments. Inspection and supervisory services are provided by the Education Division. Alberta education curricula, subject to increasing modifications, are prescribed for the schools of the Northwest Territories. Expansion is taking place in school accommodation and basic elementary and secondary education is being provided for all children in the Territories and for Eskimo children in northern Quebec, as well as vocational training for them and for young adults showing interest and special aptitude. The program, which is an integrated one for the children of all races in the North, provides for the construction of schools and student residences, curricula designed for a northern environment, bursaries and other student aids, and special vocational training projects appropriate to both local craftsmanship and mechanical trades in such fields as construction, transportation and mining. (See also pp. 218-221.)

Special Education

Interest is increasing in the education of exceptional children—those who deviate so far from the normal as to require special educational facilities. New types of special classes are sometimes started by parents of children with a common disability, who band together to provide help and show the need for such service, which is then taken over by public

bodies. Progress in providing such education varies from province to province. It is most commonly found in the city school systems; in rural areas there is usually little provision for the child who needs special attention, except for those who are admitted to residential institutions. There are six schools for the blind, 15 schools for the deaf and a number of training schools for mental defectives. Special classes are found in tuberculosis sanatoria, mental hospitals and reformatories. In many cities, there are classes for the hard-of-hearing, the partly blind and other physically and mentally handicapped children and a few for the highly gifted.

Teachers

All provinces require candidates for elementary school teacher certificates to have high school completion or better, with at least one year of professional training in a faculty of education or a teachers' college. The training usually consists of professional and academic courses, and some time spent in practice teaching. High school teachers are generally university graduates who have taken an additional year of professional training in a college of education, or who have graduated with a degree in education. The trend is for the government departments of education to give the universities responsibility for the training of elementary school teachers as well as secondary school teachers. In Newfoundland, Prince Edward Island, Manitoba, Alberta and British Columbia all teacher training is conducted at the university, where three or four different courses leading to a degree are provided. About three quarters of the time is devoted to academic courses in arts and science and the remainder to professional courses. In some of the other provinces, close contact is maintained between teacher training college and university.

In 1965-66 there were 85 normal schools and teachers' colleges and 28 faculties or colleges of education engaged in teacher training with a total enrolment of over 32,000. In the same year there were 202,000 full-time teachers in the public elementary and secondary schools throughout the 10 provinces and 11,000 in the private schools.

Most teachers in these schools are paid according to a local salary schedule based on years of training and experience; they contribute to a provincial superannuation scheme and are members of a provincial professional organization. In 1965-66 about 66 p.c. of them were women, of whom a little more than half were married. The median salary of all teachers and principals in the eight provinces other than Quebec and Saskatchewan was \$5,215, an increase of 5.3 p.c. over the previous year. Apart from teachers in Quebec concerning whom adequate data were not available, about 13 p.c. of those in elementary schools and about 73 p.c. of those in secondary schools had university degrees.

Higher Education

Out of the two distinct cultures upon which the Canadian nation is founded have arisen two somewhat different systems of higher education. One, originally patterned on the French system before the secularization of higher education in France with the majority of the institutions under control of Catholic orders or groups, has in recent years adapted more and more to North American traditions but still retains distinctively French characteristics. The other was originally designed more according to English, Scottish and United States practices, instruction being given in English and controlled by a variety of groups—religious denominations, governments and private non-denominational bodies. Institutions comprising a third small group and giving instruction to both English-speaking and French-speaking students are operated or controlled mainly by Catholic groups, although the first such bilingual institution to be established—the University of Ottawa—was reorganized in 1965 under a non-denominational board of governors.

Large universities, with numerous faculties and provision for graduate study in many fields, are comparatively recent phenomena. Until the middle of the nineteenth century, higher education in Canada included little more than arts and theological training. From that time, more instruction in science and certain professional fields was gradually intro-

Scarborough University, just east of Toronto, is one of the thirteen new universities established across Canada within the past twenty years. These new university buildings and those added to older campuses are generally avant-garde in structure, with a forward-looking active aspect very different from the quiet staid appearance of university buildings constructed in previous decades.

The Old Arts Building of the University of New Brunswick, erected during 1825-28, is the oldest university building still in use in Canada. It is now surrounded by twenty-six permanent buildings and accommodates the university administrative offices.

duced. Graduate studies, to judge by the number of earned doctorates, did not acquire numerical importance until after 1920. Only for the past 20 years or so have more than 100 earned doctorates been granted annually.

Civil legislation regarding the establishment of new institutions, or changes in existing ones, is usually enacted by provincial legislatures, except for federal military colleges and a few institutions originally established by Act of the Canadian Parliament. Once an institution is legally chartered, control is vested in its governing body, the membership of which is indicated in the charter. The line of authority runs from the board of governors through the president (or *recteur*) to the senate and deans and the faculty as a whole.

The composition of the board of governors varies according to the type of institution. Provincial universities normally have government representation; church-related institutions have clergymen. Nearly all boards have either direct representation from the business community, alumni associations and other organizations, or are advised by these groups through advisory boards or committees. The size of the board varies from a very few to over forty. It has ultimate control of the university and normally reserves to itself complete financial powers, including the appointment of the president and most other staff. On occasion there will be faculty representation on the board and recently there have been attempts on the part of faculty groups of many institutions to obtain greater representation on the boards of governors. Responsibility for academic affairs is usually delegated to the senate. Composed mainly of faculty members, although there may also be alumni and representatives of non-academic groups included, it is responsible for admission, courses, discipline and the awarding of degrees.

Although there are variations, most students enter a university or the *cours collégial* of a *collège classique* after the completion of from 11 to 13 years of elementary and secondary schooling. In from three to five years, courses of instruction lead to a bachelor's degree in arts, pure science and such professional fields as engineering, business administration, agriculture and education. Courses in law, theology, dentistry, medicine and some other fields are longer—usually requiring for admission completion of part or all of a first-degree course in arts or science. For those pursuing graduate studies and research, the second degree is normally the master's or *licence*—at least one year beyond the first degree—and the third is the doctorate, normally requiring at least two additional years beyond the second degree.

There are about 400 institutions of higher education in Canada, of which about 50 have degree-granting powers (not including about a score that confer degrees in theology only). Full-time enrolment in the fall of 1966 was 234,000, a 13.7 p.c. rise over the previous year. The tremendous increase in demand for university places in recent years has resulted in a rapidly intensifying crisis in the financing of higher education, and a commission under the chairmanship of Dean Vincent Bladen of the University of Toronto was set up in 1963 by the then Canadian Universities Foundation, now the Association of Universities and Colleges of Canada, to study the financing of higher education in Canada. The Commission presented its report in the fall of 1965; among its recommendations were many referring to increased federal support for the universities. The current financing of universities is discussed at pp. 378-379.

In addition to the full-time university-grade enrolment, almost as many students are enrolled at the pre-matriculation level or are taking university-grade courses on a part-time basis, whether in the evenings, during summer session or by correspondence. The numbers of graduates in most faculties for the academic years ended 1965-67 are given in Table 10, p. 377.

Adult Education

A variety of opportunities is provided to adults for further academic, vocational and cultural experiences beyond the regular full-time school system for young people. Each province has developed its own programs, operated mainly by local school boards and provincial universities and supplemented by independent universities and private organiza-

tions. The Federal Government sponsors some adult education programs and provides grants-in-aid to the province for others. Co-ordination of these programs is secured through voluntary associations at national and provincial levels.

In 1964-65, total course enrolment in adult education (as defined by UNESCO) was nearly 3,000,000. Two thirds of the enrolment was in professional and vocational training, including university-sponsored refresher courses and technical, trade, agricultural and business courses, under various auspices. Another 13 p.c. was in health and social education courses, including courses in marriage preparation, citizenship training, first-aid, water safety, child care, nutrition, and courses designed to assist in the treatment or prevention of specific diseases. Academic courses leading to a high school diploma or university degree accounted for nearly 11 p.c. of the total enrolment and fine arts and other cultural subjects for the remainder.

Many public and private institutions and organizations also sponsor informal public lectures, film showings, guided tours, musical and dramatic performances and similar activities of an educational nature for adults. Workshops, conferences and residential adult education, as well as regular courses, help to prepare those who staff these activities.

How Education Costs are Met

In 1964 about 8 p.c. of Canada's total national income was spent on formal education. Over 20 p.c. of all municipal, provincial and federal revenue went for education and of the amount so spent, the municipalities provided 32 p.c. and the provinces 46 p.c.

As stated on p. 355, the actual operation of public elementary and secondary schools is in the hands of the local elected or appointed school boards which determine the budgets and therefore the amount of taxes required for school purposes. In most cases, these taxes are levied and collected for the boards by the municipalities; however, in those areas where there is no municipal organization the school boards have the power to levy and collect taxes for school purposes. At present, local governments provide 51 p.c. of the cost of operating the public schools, provincial grants provide 47 p.c. and the remainder is obtained from various other sources. Except in Newfoundland, fees are almost non-existent. Four provinces—British Columbia, Alberta, Manitoba and Nova Scotia—pay operating grants on an equalization formula and thus ensure at least a minimum level of education throughout the province; the standard is determined either in terms of so much per pupil, or from an established salary scale for teachers with a prescribed teacher-pupil ratio, or by some combination of these.

In Newfoundland where municipal organization scarcely exists outside certain larger centres, there are three school-tax areas (centres). Consequently only about 1.2 p.c. of school revenue is provided by local taxation: the province provides about 87 p.c. and most of the remainder is paid by parents in the form of fees. In Prince Edward Island where there is no municipal organization outside of the cities of Charlottetown and Summerside, the school boards levy and collect property and poll taxes but the province provides about two thirds of the operating costs. Ontario and Saskatchewan make use of various equalization and incentive grants and New Brunswick uses a combination of a basic grant per pupil and special grants. Most provinces provide grants for school buildings and equipment, establish loan funds, and guarantee debentures for school purposes and assist in selling them.

In 1965-66, universities and colleges received 60 p.c. of their current operating funds from provincial governments and the Federal Government, 26 p.c. from fees, 2 p.c. from endowments and gifts and 12 p.c. from a variety of other sources. Private schools and colleges are normally supported by student fees, endowment income, and gifts and support from sponsoring bodies.

Trade and Technical Education and Training

Increasing use of automated processes in business and industry is resulting in a shrinking market for unskilled and semi-skilled workers. Early school dropouts are finding it

increasingly difficult to find suitable employment and many are now trying to acquire in their adult years the general education or training in the skilled trades that they missed in their youth. Those persons still in the regular school system are tending to remain longer and go farther in the system, partly because of the changing attitudes of society toward education and partly for economic reasons.

Hand in hand with this growing demand for better educational facilities, educators are striving to provide comprehensive programs at all levels to meet the needs not only of the university-bound but also of the great majority who require adequate preparation for early entry into the labour force. It is now accepted that vocational education for adults as well as for youths is a public responsibility which must be provided, as needed, throughout man's working life. Education of this nature is of national concern and has a direct impact upon material prosperity, the national economy and the standard of living.

The pattern of vocational education in Canada varies from province to province and there are variations within the provinces. However, there are three basic types of institute offering vocational education—secondary schools, trade schools and post-secondary institutes of technology. Many municipal school boards provide vocational courses as part of the regular secondary school program in technical or composite-type schools. Students in these schools get some general vocational training or training in certain specific fields, such as typing or auto-mechanics, along with instruction in general academic or cultural subjects.

Trade schools, on the other hand, are open only to those who have passed the provincial school-leaving age and have left the regular school system. These schools offer specialized training and their purpose is to develop competent tradesmen. Courses at the trade level do not usually require high school graduation; the grade level demanded, which varies according to province or trade, ranges from grade 8 to grade 12.

The third type, the institutes of technology, operate at a higher level of training. Enrolment in the institutes presupposes high school graduation or at least high school standing in such relevant subjects as mathematics and the sciences. Graduates from institutes of technology are awarded diplomas of applied arts or diplomas of technology and form an essential link between professional engineers or administrators on the one hand and qualified craftsmen on the other. Most of the institutes of technology and trade schools across Canada are provincially operated.

In addition to the vocational education and training provided by these three types of publicly operated schools, many private business colleges and trade schools offer a wide variety of business, trade and technical courses, some through correspondence. Vocational education is also carried out under a system of apprenticeship training. Such training is given mainly on the job, with classes taken at the trade schools either during the evening or on a full-time basis during the day for periods ranging from three to 10 weeks a year.

During the past six years under the Technical and Vocational Training Agreement the Federal Government shared provincial costs for training in secondary, pre-employment, occupational, post-secondary and adult programs provided that the provincial programs met the conditions of the federal-provincial agreement; however, the shared-cost agreements expired on Mar. 31, 1967 and were not renewed. Under new legislation, the Adult Occupational Training Act, the Federal Government takes full rather than partial responsibility for financing the cost of training adults who are or should be in the labour force. The cost of providing primary, secondary and post-secondary education remains a provincial responsibility.

If, in the opinion of a Manpower Counsellor, it is in the best interest of the individual and of the economy for an adult to undertake training or retraining, it will be purchased by the Federal Government from a public or private training institution or from industry.

The new program also provides for the payment of allowances to persons who have adult economic responsibilities to enable them to take training but it intentionally avoids the payment of such allowances to youths whose education should normally be provided by the province. Evidence has accumulated to suggest that providing allowances of \$35 to \$90 per week could otherwise encourage young people to drop out of school and yet these rates are quite necessary to replace the income of an adult with economic responsibilities. Trainees who have been three years in the labour force, which includes periods during which employment was being sought, or those who have dependants to support, are paid these allowances.

The federal-provincial Capital Assistance Program has been extended for the benefit of those provinces which were not able to take full advantage of the previous program. This will allow for a continued expansion of facilities to carry out a variety of vocational programs. During the period Apr. 1, 1961 to Mar. 31, 1967, projects valued at nearly \$1,477,000,000 were approved, which, when all completed, will provide a total of 439,952 new places for students, most of whom will be enrolled in two- or three-year courses. These included the construction of 540 new high schools with facilities for vocational training plus major additions to 115 such schools; construction of 83 new trade schools and enlargement of 111 existing trade schools; and construction of 19 new technical institutes plus major additions to 20 existing institutes. In addition, 150 minor projects and four special equipment projects were undertaken involving extension to existing schools. The additional facilities are summarized by province as follows:—

<i>Province or Territory</i>	<i>New Schools</i>	<i>Major Projects Involving Additions to Existing Schools</i>	<i>Minor Projects Involving Additions to Existing Schools</i>	<i>New Student Places</i>
		No.	No.	
Newfoundland.....	13	1	4	3,870
Prince Edward Island.....	2	—	6	1,486

Yukon Territory.....	1	1	—	482
Northwest Territories.....	—	1	—	30
TOTALS.....	642	250	150	439,952

In addition to assisting financially with the provision of physical facilities for training, the Federal Government shares in the operating costs of the various programs conducted under the Technical and Vocational Training Agreements, including the Apprenticeship Training Agreement. These programs are closely correlated with the common objectives of training the country's labour force at all levels below university and in all fields.

Of particular concern is the need to up-grade both the educational and vocational competence levels of those already in the labour force. The Federal Government undertakes to share the expenditures made by employers in developing and operating approved training

programs for their employees, particularly basic training for skill development, re-training of technologically displaced persons, and apprenticeship training; higher level and other training projects are also encouraged. A Manpower Consultative Service has been established to assist industry with problems encountered in the fields of manpower training and employment and to take part in the manpower research program.

Federal Contributions to Education

Some 50 Federal Government departments and agencies contribute to education in one way or another. As stated on p. 355, the Federal Government has no responsibility for the organization and administration of education. It has, however, a vital interest in the general level of education and skills of the population and the extent of the scientific research carried on in Canada, realizing the profound effect these factors exercise upon the development of the national economy. Accordingly, the most important educational programs financed by the federal treasury are: (1) various provincial schemes of vocational training; (2) operating grants to universities and colleges computed in 1966-67 at approximately \$5 per capita of provincial population and distributed to individual institutions according to their full-time enrolment by the Association of Universities and Colleges of Canada; and (3) grants for specific research projects undertaken by individual professors and other research personnel at universities. In the year ended Mar. 31, 1967, the federal treasury spent slightly more than \$221,000,000 on provincial vocational training programs, almost \$71,000,000 on operating grants to universities, and over \$42,000,000 on grants for research in universities, a total of more than \$334,000,000 on these three programs alone.

As a result of the federal-provincial conference of October 1966, the Federal Government undertook to provide increased support to education. Recognizing that education is a provincial responsibility, it decided to discontinue payment directly to universities of operating grants, and to expand its support beyond university education and include in its program all, or almost all, post-secondary education, i.e., the educational institutions and courses requiring for admission at least junior matriculation, or its equivalent, in each province. The provinces have been offered the choice of either a federal grant amounting to \$15 per head of population, or 50 p.c. of operating costs of post-secondary education, whichever is the greater. Implementing this proposal, the Parliament passed, in March 1967, the Federal-Provincial Fiscal Arrangements Act, 1967, dealing with this program, and placed the responsibility for its administration upon the Department of the Secretary of State. Under the terms of this Act certain percentages of federal revenues plus required cash will be transferred by the federal treasury to the provinces, commencing with the 1967-68 fiscal year, and will continue for five years. It is estimated that the financial resources so transferred to the provinces in 1967-68 will amount to \$345,000,000, and will be disbursed by the provincial governments at their discretion.

The student loan program is operated under the Canada Student Loans Act (SC 1964, c. 24), assented to July 28, 1964, when \$40,000,000 was set aside to enable full-time students to borrow up to \$1,000 annually, interest-free for five years—the \$5,000 or less to be repaid with interest commencing six months after the student has graduated. Provision is made for the allocated amount to be increased year by year in proportion to the number of persons 18-24 years of age in the population. The purpose of the loan plan is to assist those students who, for financial reasons, would otherwise be prevented from getting a post-secondary education or would not be able to devote full time to their studies. These loans may be made only on the basis of certificates of eligibility issued by the participating province through the university or institute of technology concerned. There is no upper or lower age limit for eligibility. The loan scheme is operated by the chartered banks, the

Federal Government guaranteeing the loans and paying the interest while the student is attending college. All provinces except Quebec participate; Quebec offers its own student assistance program for the benefit of Quebec residents.

The Act provides for basic allocations for each province, establishing the limit to which each may authorize loans under the Act. It also provides for supplementary allocations that may be used to compensate for differences in relative demand as between provinces, based on provincial population in the 18-24 year age group. The basic allocations for the year 1966-67 for participating provinces totalled \$41,700,000, in addition to which there was authority for discretionary allocations up to \$12,200,000, making a total maximum of \$53,900,000 authorized under the Act. Loans actually authorized amounted to \$41,200,000.

Under the Technical and Vocational Assistance Act (SC 1960-61, c. 6), the Federal Government, until 1975, contributes 75 p.c. of the total spent by a province on buildings and equipment for approved projects as determined under the federal-provincial agreements, including high school vocational classes, trade schools, institutes of technology, organized training on-the-job, apprenticeship, rehabilitation, management education, etc. (see also p. 363).

As mentioned on p. 364, the value of provincial projects approved by the federal authorities under the capital assistance program during the period Apr. 1, 1961 to Mar. 31, 1967 totalled nearly \$1,477,000,000, the federal contribution being over \$792,000,000 when all projects are completed. In the same period the actual cash payments made by the federal treasury to the provinces amounted to almost \$592,500,000. Beginning Apr. 1, 1967, the limit of this assistance on provincial capital projects was increased from \$480 per capita of provincial population aged 15 to 19 years, as at the 1961 Census, to \$800 per capita. Based on that population of 1,432,559, the provincial and territorial governments may be entitled to the federal assistance up to almost \$553,600,000.

The Federal Government through the Canada Council in 1957 provided an amount of \$100,000,000, half of which was to be distributed among the universities for specified building and equipment purposes, similar to the distribution of grants. Interest from the remaining \$50,000,000 was to be used to assist in the development of the arts, humanities and social sciences mainly through scholarships (see pp. 395-396).

Other contributions are more indirect and include scholarships, research grants and reports or services of value to the schools. Research grants are made by the National Research Council, the Defence Research Board, the Department of National Health and Welfare, the Department of Manpower and Immigration and other agencies. Some Departments such as Agriculture, Health and Welfare, etc., provide materials and publications of value in the school programs, and the National Museum, the National Gallery, the National Film Board and the Canadian Broadcasting Corporation contribute directly or indirectly to various school programs (see pp. 391-394).

More directly, the Federal Government is responsible for the education of the Eskimos, Indians and white persons in the Territories (see p. 359), the Indians on the reserves, prisoners in penitentiaries, members of the Armed Services and their dependants and in-service training for permanent personnel. It also assists in citizenship training and other out-of-school informal education activities.

External Aid.—Some 13,000 full-time university students, a large proportion of them in the graduate schools, come to Canada each year from many countries; the largest number are from the United States although the number from Commonwealth and other countries is increasing very rapidly. The external enrolment in 1966 represented about 5.5 p.c. of the total enrolment. The number of such students is about equal to the number of Canadians studying abroad. (See Table 9, p. 376.)

Canada's External Aid Office is responsible for the operation and administration of external assistance programs, including educational assistance to Commonwealth and other countries. In the academic year 1966-67, such assistance consisted of 542 teachers including teacher college personnel, 123 university staff members sent out individually or in teams, and 342 (calendar year 1966) technical advisers in vocational education, health and welfare, government administration and other areas. More than 6,000 persons have been trained in Canada since 1950; the number enrolled in 1966-67 was 2,964, compared with 2,538 in the previous year. The objective of this training is the development of an indigenous training capability in the emerging countries and persons trained in Canada are expected to return to their homelands to convey their skills to others.

From 1950 to 1967 Canada's expenditures abroad on capital projects in aid of education amounted to about \$17,000,000. Capital assistance includes the building and equipping of educational institutions; major projects include Canada Hall, a residence for the University of the West Indies in Trinidad; technical equipment to schools in Malaysia and Tanzania; and audio-visual equipment, handicraft supplies and other teaching aids to various countries.

In 1966-67, under the Commonwealth Scholarship and Fellowship Plan which began in 1960, some 250 Commonwealth students were studying in Canada (see also p. 186).

Canada has a number of voluntary agencies interested in aiding students from other countries, several of which receive some assistance from the Federal Government.

Section 3.—Statistics of Schools, Universities and Colleges

Elementary and secondary schools may be classified as either publicly controlled or private. The publicly controlled schools include: the public and separate schools under local school boards—by far the most numerous group; provincial schools which at this level are limited mainly to trade schools, correspondence courses, and special schools for the blind and deaf; and federal schools for Indians, for children in the Northwest Territories, and for the children of members of the Armed Forces overseas. Private schools may be academic, business (commercial), trade, technical, correspondence or even a combination of these.

Institutions of higher education may be provincial, church, independent universities and colleges, or federal military colleges. In addition there are institutes of technology, teachers' colleges, theological institutions and schools for such specialized fields as nursing, agriculture, paper-making, fisheries, graphic and fine arts, languages, etc. Some of these are provincial and some private.

Most organized classes for adults operate under the auspices of universities, colleges, local school boards, churches or community organizations.

Table 1 shows full-time enrolment at all levels each year for the period 1957-58 to 1966-67 and Table 2 shows the number of schools, teachers and pupils for all types of education institutions, classified by province, for the school year 1965-66. In all types of schools the number of pupils has increased each year over that period. The increase was first noticed at the elementary level some six years after the birth rate began to rise during the war years. About eight years later the children born during the War were entering high school and four years later they began entering university. The number of teachers is rather closely related to the number of students although the trend is toward larger classes. On the other hand, the number of schools has remained fairly constant, the increase caused by the construction of new and larger schools in urban areas being counterbalanced by the closing of many one-room rural schools.

**1.—Full-Time Enrolment in Elementary and Secondary Schools, and in
Universities and Colleges, School Years 1957-58 to 1966-67**

NOTE.—The figures for elementary and secondary grades given in this table do not agree with those published in previous editions of the Year Book because of certain differences in classification.

¹ Day, residential and hospital schools administered by the Federal Government. ² Also included with "Higher Education". ³ Under Programs 3, 4, 5, 6 and 8 of the federal-provincial agreements. ⁴ Includes indentured apprentices taking full-time, part-time and correspondence courses. ⁵ Included with Nova Scotia. ⁶ Includes enrolment in courses sponsored by public libraries, business colleges and trade schools, teacher-training institutions, museums and art galleries, wheat pools and industry. ⁷ Includes 5,089 enrolments in private trade schools, not distributed by province.

An attempt has been made to tabulate total expenditure on education, including formal education at all levels, vocational training of all types and also expenditure on cultural activities related to education such as adult night classes, fine arts and handicraft courses, and libraries, museums and art galleries. Such expenditure for the year 1964 is presented in Table 3, classified by source. Details of income of school boards for publicly controlled elementary and secondary schools for the years 1962-64 are given at pp. 374-375 and financial statistics for universities and colleges at pp. 378-380.

¹ Includes the Yukon and Northwest Territories.
included in above items.

² Capital grants from the Federal Government are
³ Limited to reported expenditures of public funds.

⁴ Includes capital costs
from current funds.

Subsection 1.—Elementary and Secondary Schools

Control.—As stated on p. 356, direct control and operation of public schools is by school boards, which operate under school laws and regulations. School boards may be boards of larger units, local boards within larger units or independent boards for rural schools, towns or cities, the members of which may be all elected, partly elected and partly appointed or all appointed; some schools are operated by trustees appointed by the province in lieu of a board. As their designations imply, private schools are administered by private organizations and federal schools by federal authorities.

Table 4 gives the number of active public school boards and school trustees in each province as at December 1966.

4.—Active School Boards and School Trustees, by Province, as at December 1966

² Boards of Education, all members of

Enrolment.—Table 5 shows enrolment of all elementary and secondary pupils in Canada and in Department of National Defence schools overseas, and classifies them by grade. Private schools and schools for Indian and Eskimo children are included in these figures. Enrolment in private schools accounted for 4 p.c. of the total 1965-66 enrolment at the elementary and secondary levels. Schools operated by Federal Government departments, that is, schools for Indian children, schools in the Territories and overseas schools for children of Service personnel, accounted for about 1 p.c. of the total.

School enrolment has been increasing in recent years much more rapidly than the general population. Total school enrolment in 1965-66 represented a 3.2-p.c. increase over the previous year. In comparison, the annual rates of increase in total school enrolment for the three previous years ranged from 4.0 p.c. to 4.2 p.c.; the country's population during the same period increased annually by amounts varying from 1.7 p.c. to 1.8 p.c.

¹ Includes Ungava District of Quebec.² Total for Yukon Territory was 3,271 pupils.

Teaching Staffs.—Between the school years 1945-46 and 1965-66, the number of teachers in the publicly controlled schools of the ten provinces increased from 77,479 to 201,855, or 161 p.c. The number of men teachers increased by 295 p.c. and the number of women teachers by 120 p.c.

After moderate increases between 1946 and 1960, median experience of teachers declined over the following six years, a trend attributable to the large number of new teachers entering the profession. Because most of these new teachers have been employed in the cities, median experience there has declined rapidly from a high in 1946 of 16.7 years in eight provinces (excluding Quebec and Ontario) to a low in 1966 of 6.5 years in eight provinces (excluding Quebec and Saskatchewan). The median experience of all teachers did not show such a pronounced decline, ranging between 7.0 and 8.0 years up to 1960 and then declining to a new low of 6.7 years for eight provinces (excluding Quebec and Saskatchewan).

The median salary in 1966 for all teachers in eight provinces (excluding Quebec and Saskatchewan) was \$5,215, representing an increase of 299 p.c. over the median salary in 1946 of \$1,308, based on data from nine provinces (excluding Quebec). The rate of increase from one year to the next has fluctuated considerably, ranging from 16.8 p.c. between the school years ended in 1947 and 1948 to 2.4 p.c. between 1962 and 1963. The increase between 1964 and 1965 was 4.9 p.c. and that between 1965 and 1966 was 5.3 p.c.

¹ Comprises teachers and principals instructing or supervising elementary grades only, and those instructing or supervising both elementary and secondary grades in rural schools with five or fewer classes. Teachers and principals in Ontario are classified as elementary according to the provincial *Report of the Minister, 1965*. ² Comprises teachers and principals instructing or supervising secondary grades only, and those instructing or supervising both elementary and secondary grades in urban centres and in rural schools with six or more classes. Teachers and principals in Ontario are classified as secondary according to the provincial *Report of the Minister, 1965*.

Financial Support.—Table 7 shows details of the income of public school boards for the years 1962-64. In most provinces, local taxation is the most important source of revenue, followed by provincial government grants. In 1964, all other sources of income accounted for 2 p.c. of total current revenue. (See also p. 362.)

Not all provinces collect and publish figures for debenture indebtedness, although it is the usual practice in all provinces, except Newfoundland, for boards to finance new construction, at least in part, by issuing debentures. Provincial aid toward capital expenditures may take the form of a percentage of total cost, a fixed amount per classroom or assistance with debenture debt charges. Many provinces guarantee debentures issued by school boards and others assist in marketing them.

7.—Income of School Boards for Publicly Controlled Elementary and Secondary Schools, by Province, 1962-64

NOTE.—The receipts shown in this table do not include any amounts raised by loans or the sale of bonds or debentures as all revenue of this nature must be repaid ultimately with money raised by local taxation.

Subsection 2.—Universities and Colleges

Institutions.—An institution of higher education in Canada is generally defined as one that offers one or more years of work beyond the most advanced high-school grade in the province in which it is located, with all or part of the work offered being acceptable for credit toward a university degree or equivalent diploma. The definition thus excludes institutions offering technical and vocational post-high school courses for which credit is not given.

In 1966-67 there were nearly 400 institutions of higher education in Canada, of which about 50 have degree-granting powers (not including about 20 that confer degrees in theology only).

Enrolment.—Full-time university-grade enrolment continues to increase year by year and indications are that enrolments may well reach the 400,000-mark in another five years. Table 8 shows full-time enrolment by province for the academic years ended 1964-67. In addition to full-time students, there were about 84,000 part-time university-

grade students (including over 8,000 graduate students) in attendance during the regular 1966-67 winter session, and an estimated 6,500 students take university-grade credit correspondence courses each year. University-grade summer school enrolment was over 70,000 in 1966.

Foreign enrolment has risen considerably during the past decade, with a larger proportion of students from countries other than the United States and Britain coming to Canadian institutions, as shown in Table 9. In 1966-67 about one of every 18 full-time university students in Canada was a resident of a country other than Canada. The United States, Hong Kong, Trinidad and Tobago, India and Britain each accounted for over 500 students, and France, Pakistan, Malaysia, Viet-Nam, Nigeria, Jamaica, the Republic of China, Japan, Germany, Guyana and Haiti contributed from 100 to 400 each. About 150 other countries or territories were represented in the figures.

¹ Includes Bachelors of Letters and Social Science.

² Some institutions include Science degrees in Arts.

³ Includes Bachelors of Accounting and Secretarial Science.

⁴ Prior to 1964-65, l'Université de Montréal and l'Université Laval granted the M.D. degree only after the intern year. In 1964-65 they began to grant it before the intern year, and for that year both institutions had two graduating classes.

⁵ Includes M. Com., M.Ed.,

M.Paed., M.S.W., as well as M.A. In some institutions, M.Sc. degrees are included with M.A.s. ⁶ Includes M.A.Sc., M.S.A., M.Sc.F., M. Arch., M.V.Sc., M.Sc. Dent., M. Surgery (where conferred separately) as well as M.Sc.

⁷ The "Licence" in the French-language universities is the next degree following the Bachelor.

Teaching Staffs.—Table 11 shows the trend in university teaching staffs since 1958.

11.—Full-Time Teaching Complement in Universities and Colleges, Academic Years Ended 1959-68

NOTE.—Figures are estimates based on returns from institutions representing about 50 p.c. of the total enrolment and include some research personnel and junior and sessional lecturers and assistants.

Finances.—Table 13 gives a 10-year series of the finances of Canadian universities. Since 1954 they have received more than one half of their revenue from government grants and a very small amount from municipal councils. Beginning with the academic year 1951-52, the Federal Government has provided university grants to help to meet current operating costs. These grants were originally paid on the basis of 50 cents per head of population in each province and the eligible institutions received their share of the provincial allotment according to the number of full-time students in undergraduate and graduate courses. The rate of grant was increased to \$1.00 per capita in 1956-57, to \$1.50 in 1958-

59 and to \$2.00 in 1962-63. In 1966-67 federal grants, under a somewhat modified formula, were increased to approximately \$5.00 per capita. The Province of Quebec did not accept this grant for the years up to 1955-56. From 1956-57 to 1959-60 the payments refused by Quebec were held in trust by the Canadian Universities Foundation (now the Association of Universities and Colleges of Canada), which administers the fund. In 1960-61 the Quebec Government and the Federal Government negotiated a new tax-sharing agreement under which Quebec provides its own grants and is reimbursed by an abatement of corporation tax. Commencing with 1967-68 the Federal Government has discontinued paying grants directly to universities. Instead, the government agreed to transfer to the provinces financial resources (certain portions of federal revenues and required cash payments) equal to either \$15.00 per capita or 50 p.c. of the operating costs of the post-secondary education, whichever is the greater. The financial resources so transferred will be disbursed by provincial governments at their discretion. Table 14 gives details of the federal grants for each of the academic years ended 1965-67.

The Federal Government also provides assistance to universities through the University Capital Grants Fund which is administered by the Canada Council. The original amount in the fund was \$50,000,000 (interest and profits to Mar. 31, 1967 increased it to over \$67,000,000), to be granted in amounts not exceeding 50 p.c. of specific building or capital equipment projects, having regard to the population of each province. Up to the end of March 1967, a total of over \$66,000,000 had been authorized. Grants are paid in four equal instalments spread over the period of construction so that there is a time lag between approval and payment. The Canada Council was also endowed with an additional \$50,000,000 (increased by \$10,000,000 Apr. 3, 1965), the interest on which is available for the provision of scholarships or other assistance in the fields of the arts, humanities and social sciences (see p. 395).

Subsection 3.—Vocational Education

Table 15 summarizes the data on full-time vocational training classes. The duration of these classes may vary from three weeks taken annually by indentured apprentices at provincially operated trade schools, to three-year vocational high school courses or post-secondary courses offered in provincial institutes of technology. Numerous skills are taught, ranging from short courses in welding or typing to extended courses for instrument technicians or aircraft maintenance men. Students taking two-year or three-year vocational courses in public secondary schools may, upon completion, enter employment or may continue other formal training in a trade school or an institute of technology.

In addition to the full-time vocational courses, a great variety of part-time instruction is offered by both public and private institutions as an alternative to full-time training or as an attraction to the individual interested in a hobby.

¹ Enrolments of full-time students under the various programs of the federal-provincial agreements. ² As at Mar. 31, 1966. ³ See footnote ⁴. ⁴ Includes students from other Atlantic Provinces. ⁵ See footnote ⁶. ⁶ Includes enrolment in one school in Newfoundland and one in Prince Edward Island. ⁷ In addition, there were 19,485 vocational students in high schools not approved under Program 1 of the federal-provincial agreements. ⁸ Excludes 3,225 full-time students in one-year preparatory courses at institutes of technology and agreements. ⁹ In addition, there were 7,586 part-time students and 132 students taking formal apprenticeship courses by correspondence. ¹⁰ In addition, there were 17,814 students in trade schools and 23,215 in business colleges taking part time courses, and 21,389 taking correspondence courses.

Subsection 4.—Adult Education

Adult education benefits from a wide variety of sponsors, both public and private, but most important in this respect are government departments and agencies at all three levels. Although the Federal Government makes substantial contributions, provincial departments of education, of course, play the major role since education is a provincial responsibility. Total adult education enrolment in 1964-65 was 2,854,065; the apparent increase of 47.4 p.c. over the previous year is mainly accounted for by the inclusion, for the first time, of enrolment in informal courses conducted by health departments and agencies, which comprised 12.9 p.c. of the total. Government-sponsored classes accounted for 69.5 p.c. and universities and colleges (reported by 96 institutions) for 10.7 p.c.

PART II.—CULTURAL ACTIVITIES RELATED TO EDUCATION

Section 1.—The Arts and Education*

Fine Art Schools, Galleries and Organizations.—Fine art (architecture, painting and drawing, commercial and decorative arts, graphics, ceramics and sculpture) appears as an elective subject of the faculty of arts in a number of universities, where it may be taken as one of five, six or more subjects for a year or two. Six universities offer a Bachelor of Fine Arts degree:—

Mount Allison University, Sackville, N.B.
 Sir George Williams University, Montreal, Que.
 University of Windsor, Windsor, Ont.
 University of Manitoba, Winnipeg, Man.
 University of Alberta, Edmonton, Alta.
 University of Victoria, Victoria, B.C.

Eleven universities offer a Bachelor of Arts degree with a major in fine art:—

Université de Moncton, Moncton, N.B.
 McGill University, Montreal, Que.
 Sir George Williams University, Montreal, Que.
 University of Guelph, Guelph, Ont.
 McMaster University, Hamilton, Ont.
 University of Toronto, Toronto, Ont.
 University of Western Ontario, London, Ont.
 University of Windsor, Windsor, Ont.
 University of Saskatchewan, Saskatoon and Regina, Sask.
 University of Calgary, Calgary, Alta.
 University of British Columbia, Vancouver, B.C.

There are many schools of art with varying academic requirements for admission. These offer diploma or certificate courses and are concerned largely with the technical development of the artist. Among those widely known are:—

Nova Scotia College of Art, Halifax, N.S.
 École des Beaux-Arts, Quebec, Que.
 École des Beaux-Arts, Montreal, Que.
 Institut des Arts Appliqués, Montreal, Que.
 School of Art and Design, Montreal Museum of Fine Arts, Montreal, Que.
 Lakehead College of Arts, Science and Technology, Port Arthur, Ont.
 Ontario College of Art, Toronto, Ont.
 University of Manitoba School of Fine Arts, Winnipeg, Man.
 School of Art, Regina Campus, University of Saskatchewan, Regina, Sask.
 Alberta College of Art, Calgary, Alta.
 Banff School of Fine Arts, Banff, Alta.
 Vancouver School of Art, Vancouver, B.C.
 Kootenay School of Art, Nelson, B.C.
 University of Victoria, Victoria, B.C.

Courses in these schools vary in length with the requirements of the individual student but may extend over as many as four years. In some of these schools fine crafts as well as fine arts are taught. Summer schools of art are sponsored by some of the foregoing institutions, by universities and by various independent groups. One of the more important summer schools is the Banff School of Fine Arts, affiliated with the University of Calgary.

* Revised, except where otherwise noted, by the Association of Universities and Colleges and by the Extension Services of the National Gallery of Canada, Ottawa.

Public art galleries in the principal cities perform valuable educational services among adults and children. Children's Saturday classes, conducted tours for school pupils and adults, radio talks, lectures and concerts are features of the programs of the various galleries. Many of these institutions supply their surrounding areas with travelling exhibitions and some range even farther afield. Several organizations such as the Maritime Art Association, the Atlantic Provinces Art Circuit, the Western Canada Art Circuit, the Art Institute of Ontario, the Art Gallery of Ontario and the new *Fédération des centres culturels du Québec* have been founded to carry out this sort of travelling program on a regional basis. On a smaller scale, art circuits are organized to serve certain areas such as those around St. John's, Nfld., Charlottetown, P.E.I., Trois-Rivières and Hull, Que., and Winnipeg, Man. The National Gallery of Canada conducts a nation-wide program of this nature and is the third largest circulating agency in North America. Several galleries maintain an art-rental service.

Among the principal public art galleries are:—

Fathers of Confederation Art Gallery and Museum, Charlottetown, P.E.I.
 Beaverbrook Art Gallery, Fredericton, N.B.
 The New Brunswick Museum, Saint John, N.B.
 Montreal Museum of Fine Arts, Montreal, Que.
 Musée d'Art Contemporain, Montreal, Que.
 Musée du Québec, Quebec, Que.
 Art Gallery of Hamilton, Hamilton, Ont.
 Art Gallery of Ontario, Toronto, Ont.
 Kitchener-Waterloo Art Gallery, Kitchener, Ont.
 National Gallery of Canada, Ottawa, Ont.
 Public Library and Art Museum, London, Ont.
 Rothman's Art Gallery, Stratford, Ont.
 Sarnia Public Library and Art Gallery, Sarnia, Ont.
 Willistead Art Gallery, Windsor, Ont.
 Winnipeg Art Gallery, Winnipeg, Man.
 Mendel Art Gallery, Saskatoon, Sask.
 Moose Jaw Art Gallery and Museum, Moose Jaw, Sask.
 Edmonton Art Gallery, Edmonton, Alta.
 Art Gallery of Greater Victoria, Victoria, B.C.
 Vancouver Art Gallery, Vancouver, B.C.

Other important collections of art are housed in arts councils and university galleries. Among university galleries are:—

St. John's Memorial University Art Gallery, St. John's, Nfld.
 Dalhousie University Art Gallery, Halifax, N.S.
 Creative Art Centre of the University of New Brunswick, Fredericton, N.B.
 Owens Museum of Fine Arts, Mount Allison University, Sackville, N.B.
 Université de Moncton, Moncton, N.B.
 McGill University, Montreal, Que.
 Université Laval, Quebec, Que.
 Séminaire des Clercs de St-Viateur, Joliette, Que.
 Sir George Williams University Art Gallery, Montreal, Que.
 Agnes Etherington Art Centre, Queen's University, Kingston, Ont.
 Carleton University, Ottawa, Ont.
 Hart House, and Sigmund Samuel Canadiana Gallery of the University of Toronto, Toronto, Ont.
 McIntosh Memorial Art Gallery, University of Western Ontario, London, Ont.
 York University, Toronto, Ont.
 University of Manitoba, Winnipeg, Man.
 Norman Mackenzie Art Gallery of the University of Saskatchewan, Regina, Sask.
 University of Saskatchewan, Saskatoon, Sask.
 University of Alberta, Edmonton, Alta.
 University of Calgary, Calgary, Alta.
 Fine Arts Gallery of the University of British Columbia, Vancouver, B.C.

Five of the more important galleries connected with arts councils are the St. Catharines and District Arts Council, St. Catharines, Ont., the Glenhyrst Arts Council, Brantford, Ont., the Department of Fine Arts, McMaster University, Hamilton, Ont., the Brandon Allied Arts Centre, Brandon, Man., and the Art Gallery of the Calgary Allied Arts Centre, Calgary, Alta.

Other Fine Art Organizations.—Among the leading art organizations of national scope, exclusive of museums and art galleries, are:—

- Association of Canadian Industrial Designers
- National Design Council
- Canadian Conference of the Arts
- Canadian Craftsmens Association
- Canadian Society for Education through Art
- Canadian Group of Painters
- Canadian Guild of Potters
- Canadian Handicrafts Guild
- Canadian Museums Association
- Canadian Society of Graphic Art
- Canadian Society of Painter-Etchers and Engravers
- Canadian Society of Painters in Water Colour
- Canadian Society of Landscape Architects
- Federation of Canadian Woodcarvers
- Royal Canadian Academy of Arts
- Royal Architectural Institute of Canada
- Sculptors' Society of Canada
- Town Planning Institute of Canada
- Canadian Centre for Films on Art
- Community Planning Association of Canada.

The National Gallery of Canada.—The beginnings of the National Gallery of Canada are associated with the founding of the Royal Canadian Academy of Arts in 1880. The Marquis of Lorne, then Governor General, had recommended and assisted the founding of the Academy and among the tasks he assigned to that institution was the establishment of a National Gallery at the seat of government. Until 1907 the National Gallery was under the direct control of a Minister of the Crown but in that year, in response to public demand, an Advisory Arts Council consisting of three laymen was appointed by the Government to administer grants to the National Gallery. Three years later, the first professional curator was appointed.

In 1913, the National Gallery was incorporated by Act of Parliament (RSC 1952, c. 186) and placed under the administration of a Board of Trustees appointed by the Governor General in Council; its function was to encourage public interest in the arts and to promote the interests of art throughout the country. Under this management, the Gallery increased its collections and developed into an art institution worthy of international recognition. Today, the Gallery administration comes under the aegis of the Secretary of State. The Board of Trustees, now composed of nine members representing all sections of Canada, meets twice annually. In 1960, the Gallery entered a new era in its history when the entire national collection and the staff and equipment necessary to its maintenance were transferred to new modern quarters—the Lorne Building in downtown Ottawa—which provides adequate well-lighted space for hanging the permanent collection and for displaying travelling exhibitions.

The Gallery's collections are of indisputable taste and quality. They have been built up along international lines and give the people of Canada an indication of the origins from which their own tradition is developing. The collection of Canadian art, the most extensive and important in existence, is continually being augmented by the purchase of works from the Biennials of Canadian Art and other sources. The collections include many Old Masters, among which are twelve acquired from the famous Liechtenstein collec-

tion; extensive war collections; the Massey collection presented to the Gallery during 1946-50 by the Massey Foundation; a collection of French paintings; prints and drawings; and diploma works of the Royal Canadian Academy. The prints and drawings collection consists of more than 5,000 items. The services of the Gallery include the operation of a reference library open to the public which contains more than 10,000 volumes and periodicals on the history of art and other related subjects.

The National Conservation Research Laboratory, established in 1964, provides technical information on works of art from public and private collections across Canada and is responsible for the conservation of the national art collections. In addition, research is carried out on the effects of environment on works of art and on the durability of artists' materials.

An active program of exhibitions, lectures, films and guided tours is maintained for visitors to the Gallery in Ottawa. The interests of the country as a whole are served by circulating exhibitions, lecture tours, publications, reproductions and filmstrips prepared by the National Gallery staff. Promotion of and information on art films are handled by the Canadian Centre for Films on Art and their distribution by the Canadian Film Institute. The Gallery promotes interest in Canadian art abroad by participating in international exhibitions such as the Biennials of Venice, São Paulo and Paris, and by preparing major exhibitions of Canadian art for showing in other countries. At the same time, it brings important exhibitions from abroad for circulation in Canada.

Performing Arts Schools.—Music, the most widespread of the performing arts (which also include opera, drama, ballet and dance), is a degree course in a number of universities. The following offer degree courses:—

- Acadia University, Wolfville, N.S.—B.A. with music major, and Mus. B.
- University of Alberta, Edmonton, Alta.—B.A. major and Mus. B.
- Brandon College, Brandon, Man.—B. Mus. (Education)
- University of British Columbia, Vancouver, B.C.—B.A. major and B. Mus.
- University of Calgary, Calgary, Alta.—B. Mus.
- Université Laval, Quebec, Que.—B. Mus.
- University of Manitoba, Winnipeg, Man.—B.A. major and B. Mus.
- University of Montreal, Montreal, Que.—B. Mus. and D. Mus.
- McGill University, Montreal, Que.—B. Mus.
- Université de Moncton (affiliated Collège Notre Dame d'Acadie), Moncton, N.B.—B. Mus.
- Mount Allison University, Sackville, N.B.—B.A. major
- Queen's University, Kingston, Ont.—B.A. major
- University of Toronto, Toronto, Ont.—B. Mus., M. Mus. and D. Mus.
- University of Western Ontario, London, Ont.—B.A. major
- St. Francis Xavier University (affiliated College Mount St. Bernard), Antigonish, N.S.—B.A. major
- Université Saint-Louis, Edmundston, N.B.—B. Mus.
- University of Saskatchewan, Saskatoon, Sask.—B.A. major and B.Ed. music
- Université de Sherbrooke (affiliated Collège du Sacré-Coeur), Sherbrooke, Que.—B.A. major
- University of Victoria, Victoria, B.C.—B. Mus.

Advanced instruction in music is also given at the Conservatoire de Musique et d'Art Dramatique in both Montreal and Quebec. Opera may be studied at the Royal Conservatory Opera School of the University of Toronto where advanced students work in close collaboration with the Canadian Opera Company and also at the Conservatoire de Musique et d'Art Dramatique and the Banff School of Fine Arts (summer) at Banff, Alta.

A Bachelor degree with specialization in drama may be obtained at Queen's University and the Universities of Alberta, Saskatchewan and British Columbia. Advanced instruction is also given during the summer at the Banff School of Fine Arts. The University of Toronto recently announced its first chair of drama, although it does not expect to offer degrees immediately. The University of British Columbia hopes to offer a post-graduate degree in theatre leading to the M.A. Some graduate courses are offered at the University of Saskatchewan and a degree course in drama is available at the University of Alberta. The National Theatre School of Canada offers complete practical training for talented students. It is bilingual, winter courses being held at Montreal, Que., and

summer courses at Stratford, Ont. Three years are required for the acting course and two for technical and production studies. The Manitoba Theatre School at Winnipeg is also of importance.

The National Ballet School at Toronto is the only residential ballet school in Canada. It offers academic studies together with practical instruction. Professional instruction is also offered by two other major Canadian ballet companies, Les Grands Ballets Canadiens, Montreal, and the Royal Winnipeg Ballet, Winnipeg. The Canadian School of Ballet is located in Kelowna, B.C., and advanced ballet training is given during the summer at the Banff School of Fine Arts.

Museums

The museums of Canada, as elsewhere, range from small, locally gathered, historical artifacts and objects to large government-operated institutions which collect, classify and display such objects as may be necessary to study and disseminate knowledge of natural history, human history, science and technology, with special but not exclusive reference to Canada. Many of these larger museums, especially the National Museum of Canada and the Royal Ontario Museum, have a long, distinguished heritage in research and publication of scholarly works and serve an important role as educational and cultural centres. In this area they have an advantage over other agencies of education in that they are able to provide, for study and exhibition, actual, original objects as well as descriptions and pictures of such objects. They offer many educational services to the public through exhibits, guided tours, lectures and scientific and popular publications. The following museums have staff members who are specifically charged with organizing programs in education and providing extension services:—

Nova Scotia Museum, Halifax, N.S.
 McGill University Museums, Montreal, Que.
 National Museum of Canada, Ottawa, Ont.
 Royal Ontario Museum, Toronto, Ont.
 Saskatchewan Museum of Natural History, Regina, Sask.

Other museums that conduct educational and extension programs using the regular curatorial and administrative staff are:—

The New Brunswick Museum, Saint John, N.B.
 Museum of the Province of Quebec, Quebec, Que.
 The Manitoba Museum, Winnipeg, Man.
 Provincial Museum of Natural History and Anthropology, Victoria, B.C.

Direct work with schools may involve the holding of classes within the museum or visits of museum lecturers, with exhibits, to the schools. More informal are the guided tours for visiting school classes, the lending of specimens, slides, filmstrips or motion picture films to schools, and the training of student-teachers in the educational use of the museum. A number of museums have special programs for children not directly associated with school work including Saturday lectures and film showings, activity groups, nature clubs and field excursions. At the higher educational level, museum field parties provide research training to university students in many disciplines and museum staffs act as professional consultants, answer a host of enquiries on scientific and technical subjects, and serve as consultants or advisers to foreign scholars and institutions.

For adult laymen, museums offer lectures, film showings and guided tours, the latter usually available throughout the year. Staff members may be sent to give lectures to service clubs, church groups, parent-teacher associations and hobby clubs. The latter, such as naturalists' groups, mineral clubs and astronomy societies, may use the museum as their headquarters. Travelling exhibits are prepared for showing at local fairs, historical celebrations and conventions. At least seven Canadian museums have conducted regular radio or television programs and others have made occasional contributions. Some historical museums stage annual events during which the arts, crafts or industries represented by the exhibits are demonstrated to the public.

The National Museum of Canada.*—The National Museum originated in the Geological Survey of Canada and its early history is inseparable from that institution. The first united Parliament of Upper and Lower Canada met in Montreal in 1841. In July of that year the Natural History Society of Montreal and the Literary and Historical Society of Quebec petitioned the Government to carry out a geological survey. As a result, a resolution was passed in the Estimates on Sept. 10 to defray the expenses of a Geological Survey of the Province of Canada.

William E. Logan was appointed the first director of the Geological Survey in 1842. He and his assistant, Alexander Murray, undertook their first field work in 1843, and their collections formed the humble beginnings of the National Museum. Logan was much more than a geologist and his interests extended to other branches of natural science. His diaries contain accurate drawings of named plants. He wrote in his annual report for the year 1852-53: "It may be a consideration whether a growing country like Canada could not afford to anticipate what future importance may require in the nature of a national museum and at some future time not far distant, erect an appropriate edifice especially planned for the purpose."

In the meantime, the officers of the Geological Survey continued to collect for the geological museum. In 1856, Elkanah Billings, a palæontologist, and the first of a number of specialists, was added to the staff, and the legislation passed that year to continue the work of the Geological Survey specified the establishment of a geological museum, open to the public, to exhibit specimens, books and instruments.

In 1874, the practice of recording the number of visitors to the Museum was commenced; from May 1874 to April 1875 the number of visitors was 1,017 and by the year ended April 1896 it had reached 31,595. In 1874, the distribution of specimens of minerals, rocks and other natural history objects to schools was started with a donation to the Board of School Teachers of Elora, Ont. The first organized Museum lecture program was undertaken in 1912, with a series of lectures for young people after school; by 1915, Saturday morning lectures for children and evening lectures for adults—both features of the Museum program today—were in operation. Prior to 1880, the Museum occupied several buildings in Montreal but that year the Geological Survey moved to Ottawa, occupying the former Clarendon Hotel on Sussex Street. Construction of the Victoria Memorial Museum Building was started in 1904 and in 1910 the Geological Survey moved in.

The scope of the Museum was enlarged in the "Act to make better provision respecting the Geological and Natural History Survey of Canada and for maintenance of the Museum in connection therewith" of Apr. 28, 1877. In that Act the Survey was instructed "to study and report upon the flora and fauna of the Dominion" and "to continue to collect the necessary material for a Canadian museum of natural history, mineralogy and geology". As early as the Act of 1856, the Geological Survey of Canada had been authorized "from time to time" to distribute publications relative to the Survey. From this authority developed the Museum's series of scientific bulletins presenting the researches of its staff.

The Act of 1877 established the Geological Survey and the Museum on a continuing basis and permitted the appointment of specialists in natural history. John Macoun was appointed to establish the division of biology in 1882. He was an eminent botanist who had accompanied the expedition of Sanford Fleming to explore Western Canada in 1871. Macoun's report of 1874 laid the groundwork for the establishment of western Canadian agriculture. He also published a catalogue of Canadian birds. In 1895 under the third Director of the Geological Survey, George M. Dawson, the Museum entered the field of Canadian anthropology.

In 1910 the Museum began an expanded program of research and exhibition under the direction of R. W. Brock, then Director of the Geological Survey of Canada. Unfortunately this program was curtailed during World War I because the burning of the Parliament Buildings, in 1916, forced Parliament to occupy the Museum building until 1919.

* Prepared by Dr. A. W. F. Banfield, Director, Natural History Branch, Dr. W. E. Taylor, Jr., Director, Human History Branch, and Dr. D. M. Baird, Director, Museum of Science and Technology.

Later, expansion of the exhibition halls was handicapped by the Museum sharing its building with the National Gallery of Canada and the Geological Survey of Canada. In 1927 the Governor General in Council gave authority "to designate the museum branch of the Department of Mines as the National Museum of Canada"; it is now part of the Department of the Secretary of State. During the past 20 years, particularly after the appointment of Dr. Frederick J. Alcock as Chief Curator, the Museum has increased its research, education and exhibition staff in order to play a more important role in the cultural life of Canada and perform the tasks properly assigned to the National Museum of Canada. A new National Museum building is planned for Ottawa within the next few years.

The responsibilities of a great museum include the collection, preservation, and storage of objects related to the various disciplines that fall under its purview. The next step is the undertaking of research by specialists in those fields and the publication of their findings to increase the total knowledge of their subjects. Typically, museums exhibit items from their collections as intrinsically beautiful displays and also to teach the public the scientific background to the subjects. This leads to the educational program of museums which usually includes lectures, workshops, guided tours for children and activity groups, travelling exhibits, loans, library service, and radio and television programs. The National Museum of Canada is now organized to present all these facets for the enjoyment and education of the people of Canada. It is divided into three Branches—the Natural History Branch, the Human History Branch and the Science and Technology Branch. The Natural History Branch contains the Divisions of Zoology, the National Herbarium, and Geology and Palaeontology. The Human History Branch contains the Divisions of Archaeology, Ethnology, Folklore and History, together with the Canadian War Museum. Science and Technology includes the physical sciences and all branches of technology and incorporates the previously existing National Aviation Museum. Services common to these three Branches are concerned with exhibition, educational, technical and administrative functions. During 1966, the National Museum recorded 287,468 visitors, the Canadian War Museum 235,603, the National Aviation Museum 167,039 and the National Aeronautical Collection at Rockcliffe 96,229.

The 1966-67 staff totalled 226, including 56 administrative and professional personnel, 85 technical, operational and service personnel, 41 clerical personnel and 44 casual and prevailing rate employees.

The Natural History Branch.—The 1967 field research program in natural history included a number of expeditions to various parts of Canada and adjacent areas. The work included investigations of birds in southern Ontario and in the Alberta Rockies, amphibians and reptiles of the Upper Columbia and East Kootenay Valley, B.C., and Pleistocene vertebrate faunas of the Yukon Territory. Studies were also continued on the freshwater molluscs of the Hudson Bay drainage basin, on coastal marine Bryozoa of Vancouver Island, and shallow-water crustaceans of Eastern Canada.

In addition, 14 projects on the taxonomy, distribution and ecology of various invertebrate animal groups were conducted by Canadian university staff and students under contract with the Museum. These included investigations on the planktonic rotifers of Ontario, crustaceans of lakes in Newfoundland, and sea cucumbers of British Columbia, as well as freshwater molluscs of marshes in Manitoba and southeastern Ontario, and marine boring bivalves of Eastern Canada. Additional studies were made on fishes of the Milk River in Alberta, and on frogs and toads of the Calgary area. A post-doctoral research grant was awarded for a study of Pleistocene fossil mammals of the Regina area of Saskatchewan.

The Museum also participated in oceanographic cruises sponsored by the Fisheries Research Board of Canada and the Bedford Institute of Oceanography in the eastern Pacific and western Atlantic regions, and in co-operative research studies on marine faunas of New England and the Gulf coast region of the United States.

Botanical investigations were conducted in Yukon, British Columbia, Alberta, Saskatchewan, Manitoba, Ontario and Nova Scotia. Two visiting botanists under contract with the National Museum investigated the shoreline vegetation of lakes in northern Manitoba and conducted ecological studies of cryptogams on Axel Heiberg Island.

The major field operation in mineralogy was a five-week project near Bancroft, Ont., where veins of large, well-formed crystals of nepheline and biotite were opened. This is believed to be one of the finest sources in the world for these minerals. There were also investigations and collections made in other parts of Ontario and in Quebec, New Brunswick, Nova Scotia, Vermont and California. The Museum's mineral display was removed in 1966 from the mezzanine gallery where it had been installed in 1936 to a larger area in the Museum's east wing on the main floor, which now holds a greatly expanded exhibit.

The education program continued with weekly lectures for adults, Saturday morning film programs for children, the junior nature club, the school loan collection, children's classes, guided tours, and the National collection of nature photographs.

The Human History Branch.—In the past six years there has been a marked expansion in the research and publication activities of the Human History Branch. This work combines the efforts of staff scientists and that of other scholars whose work is sponsored, in toto or in part, by museum research contracts. Research, laboratory and office studies are conducted by the Branch in history, archaeology, physical anthropology, folklore, ethnology, linguistics and ethnohistory. In 1966, about 75 research projects were under way including: archaeological field work in every part of Canada from the Pacific Coast to Newfoundland and the Arctic Islands as well as in Alaska; ethnological research in several subdisciplines of ethnology in all parts of Canada; a score of collecting projects in the folklore of Canadian ethnic groups; and diverse studies in Canadian history.

The 1966-67 exhibition program included the completion of renovations in the Indian Hall and the Bird Hall, both of which were opened to the public in late 1966, and the planning and designing of a Centennial exhibit on Confederation and of three major galleries for the new quarters of the Canadian War Museum. Exhibit assistance was also given to other museums, to Expo 67, and to the Centennial Train. Staff scientists gave many guest lectures in various centres, answered over 1,000 mail enquiries and served as consultants or advisers to foreign institutions and scientists. In addition to the production of popular articles and a long list of professional publications on the Museum's work, research papers were prepared and read at professional meetings.

The Science and Technology Branch.—In 1961 the Government announced the intention to establish, as a third Branch of the National Museum, a Museum of Science and Technology, which would incorporate the existing National Aviation Museum. Funds for the inauguration of this project were provided in the year ended Mar. 31, 1967, and a Director was appointed. A large building in southeast Ottawa was leased and the Museum was opened to the public in September 1967. Its purpose is to enable the people of Canada to understand the role of science and technology in the development of their land of great distances and many environments. Represented are the railways, so important in opening up and uniting Canada; automotive transportation; aviation; industrial technology; marine technology; agriculture; communications technology of many kinds; power, forestry and fisheries technology; mining technology and metallurgy; and the physical sciences.

An active program of public lectures and streamed tours for school children complements publication of popular accounts of many of the subject areas in an extensive education plan. It is generally built around three themes relating to the national development—how man has overcome space and time in this vast land by varied methods of transportation and communication; how man has changed his environment with science and technology and the tools he has built and used; how man has changed his living habits as a result of the changes from sod hut and log cabin to the world's second highest standard of living.

Section 2.—The Educational Functions of the Canadian Broadcasting Corporation and the National Film Board

Educational Functions of the Canadian Broadcasting Corporation.—Many hours of educational and semi-educational programs are broadcast annually on radio and television facilities of the Canadian Broadcasting Corporation. Whether these programs are directed to children, to youths or to adults, entertainment is combined with information whenever possible. Spoken-word programs, presented as readings, talks, discussions, documentary programs, dramatizations, or in forms combined with music, cover a wide range of interests.

The educational activities of the Corporation take three different forms—broadcasts for use in primary and secondary schools, programs designed to serve students at college and university level, and broadcasts designed for general adult education; in addition, programs for pre-school children are broadcast. Included, in the first group, are national programs of enrichment for students in all provinces and also programs regionally or locally planned in co-operation with the provincial or local Departments of Education for use in the particular province or community involved. In the second group, productions are carried out in co-operation with colleges and universities, some of which form part of recognized credit courses. Programs in the third group are general in character and are intended to inform adults in the broad areas of Canadian society, citizenship, economic development and the arts.

At the national level, Canadian school broadcasts are planned in co-operation with the Canadian Commission on School Broadcasting composed of representatives of the CBC and provincial education authorities. Two councils, one for French and one for English, have been established to work in close co-operation with the French and English languages services of CBC/Radio Canada. The CBC pays the entire cost of national school broadcasts; direct costs of provincial school broadcasts, both radio and television and including talent and writing, are absorbed by the Departments of Education; and indirect costs of production and distribution are paid by the CBC.

At both the national and provincial levels, the education authorities and program planners of the CBC jointly establish series of programs directed to the interests of various student groups. Many different subjects are included and the most advanced production techniques of broadcasting are employed in their presentation. In other programs, more simple techniques are involved but, in all productions, imagination and production experience are involved to make school broadcasts as interesting and exciting as possible.

From the inception of school broadcasting in Canada, both the CBC and the Departments of Education have recognized the need for having ample advance information concerning the nature and intent of the broadcast, so that the teacher is prepared to integrate the broadcast with the established learning process. Information on each program, suggestions for exercises and, as the case may require, bibliographies of additional reading material are made available. Programs for in-class use are broadcast during school hours and university-level programs are often scheduled in the evening time period although the main university-level output of the French television network is broadcast on Saturday and Sunday mornings.

For the year 1966-67, on English television, national school telecasts occupied two half-hour periods a week, provincial programming from three to five half-hour periods a week, and informal adult education approximately two and a half hours a week. English radio presented approximately five hours a week of educational enrichment, exclusive of general literary, musical and dramatic fare, and in-class school broadcasts totalled about two and a half hours a week in each province, a half hour of which was national school programming.

Formal educational programs on Canadian school telecasts included a look at federal, provincial and municipal politics; they showed some challenges to young Canadians (problems of conservation, of sprawling cities, of water, of the North); and they gave *An*

Introduction to the Theatre, which illustrated the origins and techniques of the main branches of the theatre, from classical ballet to slapstick comedy. In the area of youth programming (sports, religion, education, politics) the spectra of life and thought, all seen through the eyes of young people, were discussed on *Through the Eyes of Tomorrow*. In the field of adult education, special programs were broadcast on radio covering the three-day Winter Conference of the Canadian Institute on Public Affairs, which examines sociological questions in open meetings and group discussions. The summer evening sessions of the annual week-long Couchiching Conference have been broadcast for a number of years. This Conference, organized jointly by the CBC and the Canadian Institute on Public Affairs, examines Canadian and international affairs in open meetings and group discussions.

During the 1966-67 season, CBC Farms and Fisheries Department programming continued the presentation of specialist programs about farming as well as some of broad general interest. *This Land of Ours* dealt with Canada's national resources, and *Country Calendar* reported on rural life. *This Business of Farming* was designed primarily for farmers, dealing with such topics as soils and good soil management. *Air of Death*, a documentary about air pollution in Canada, emphasized the growing concern for this problem.

As certain events occurred in Canada and abroad, the CBC News program, *News-magazine*, and the public affairs program, *The Public Eye*, combined periodically to study the event in depth. This close integration of research, writing and production resulted, under the general title *This Week*, in memorable programs on New Brunswick, inflation and other topics.

Public Affairs again offered programs at differing levels of analysis and using a variety of techniques: *The Way It Is* used the technique of mixing interviews with entertainment. *The Public Eye* integrated film and studio techniques to probe cause and effect in public life; *Twenty Million Questions*, produced in Ottawa, concentrated on national and international events as they affected federal politics. The Science Unit of Public Affairs presented a spectacular series in colour, *Galapagos*, using the flora and fauna of those fascinating islands to illustrate the basic themes in Darwin's evolutionary writing, attracting very large audiences of up to 2,000,000 for this type of program.

In the afternoons, *Take 30* offered instruction in French to assist mothers in keeping up with children's homework; filmed insights into life in various countries in Europe and Africa (the latter a major film series called *The New Africans*, produced in co-operation with UNESCO and UNICEF); regular news analysis; and many other special features.

The number and range of CBC English radio public affairs programs are very extensive. Teams of writers and producers portrayed towns across the country for the program, *Soundings*, starting with Prince Albert, Sask., the riding of three Prime Ministers. *Between Ourselves* followed Newfoundland into Confederation, with Premier Joseph R. Smallwood telling the story. *Project 67* described Berlin, first as capital of Nazi Germany and as it is today. Dr. Jean Vanier told of his work near Paris with the mentally retarded. *The Trains*, a documentary series, brought vividly to life the truism that Canada lives by its railways. *The Best of Ideas* studied theatrical and political style down through the years. Six one-hour reports from the Couchiching Conference discussed *Great Societies and Quiet Revolutions*.

Offerings in news and public affairs on CBC radio included, among many, *The Human Condition*, a study of man's experience expressed in drama, music and documentary; *The Meaning of Mythology*; the International Teach-in on China; *Is NATO Obsolete?*; *The Perceiving Self*; the Massey lectures on *The Moral Ambiguity of America*; radio portraits of Robert Kennedy, J. S. Woodsworth, Louis St. Laurent, Daniel Johnson and Dag Hammarskjöld. Regular broadcasts of interest to farmers continued but *Country Magazine* in 1966-67 used the Centennial as a starting point for a series, *Fish, Fur, Forest and Farm*—

light-hearted but informative documentaries about these major Canadian industries. Again in that year, a farming special came from the International Plowing Match at Seaforth, Ont.

Programs on CBC radio marking Canada's Centennial included live actualities from across Canada; edited coverage of major and minor events on *Centennial Diary*; *Century*, the story of Canada in the words of the great and the not-so-great; *The Long Hundred*, using music and drama and reporting techniques to reflect the Canadian experience; *1967 and All That*, touring Canada for an often irreverent look at the celebrations; and programs about and from Expo.

On French-language television in 1966-67, school and university programming totalled six hours a week and programs in the field of adult education totalled about four hours a week. The subjects covered included French mathematics, biology, English literature, economics, Greek civilization and a medical refresher course for practising doctors. The French-language AM radio service broadcast approximately two and a half hours of formal education programs a week dealing with music, the French language, philosophy, history and geography. Adult educational programming on AM radio totalled about eight hours a week. University broadcasting, planned in co-operation with the University of Montreal, represented about 10 hours a week. Adult educational programming in both radio and television is general in character, intended to broaden the awareness and outlook of adults in a number of fields of economic, social and historical importance.

In public affairs, *Aujourd'hui*, on French-language television, offered a high-quality magazine-type program involving Montreal, Quebec City and Ottawa production points, with fresh documentation of seemingly familiar aspects of French-Canadian life such as the role of private schools and the French character of Canada's cities. Less dependent on actuality, *Le Sel de la semaine* has become a prestige program with leading world and Canadian figures; Eugene Ionesco, Marcel and Elise Jouhandeau, Paul Martin, Jean Lecanuet, Juliette Greco, André Courrèges and others have discussed their life and work and shown different facets of their personalities to the viewers. *Tirez au clair*, by its judicious choice of subject and of pairs of debaters, has used a confrontation formula to achieve striking polarity of views on important matters. The monthly program *Dossier* has produced documents of exceptional interest such as those on Picasso and on Sartre and de Beauvoir.

Many programs are directed to special audiences. Youth programs, for instance, although they have a special slant, nevertheless have the same wide range as those of interest to adults. *Jeunesse Oblige* covers classical music to jazz, sports to art, literature to folk singers. *Images en tête* initiates teenagers into a cinematographic culture and asks them to participate in creative work by joining amateur cine-clubs. For the younger children, *La Souris verte*, *La Boîte à surprise*, and *Viens voir* use the child's delight in poetry and art to open his eyes to the world around him. In all these programs, the child is asked to participate through projects, drawings and contests. Women's programs also cover a wide range of interests; *Femme d'aujourd'hui* deals not only with cuisine, decor and feminine beauty, but also with law, sociology, actualities, cinema, sports and the arts, such programs offering housewives a wide perspective of the world's events. Through entertainment, the network attempts to stimulate thought and to increase knowledge. *Atome et Galaxies*, *La Vie qui bat*, *Tour de Terre*, are entertaining by the way in which they present ideas but also, in addition to giving scientific facts, they suggest trends or patterns of behavior about which the viewer may draw his own conclusions.

Among the special Centennial programs presented on French-language radio were *l'Histoire... comme ils l'ont faite*, a tribute to the great men of Canada, and *Au jour le jour* which parallels the events of 1967 with those of 1867. The documentary, *Comment les Canadiens communiquent-ils entre eux?* showed the great importance of communications

in a country as vast and as sparsely populated as Canada. Also, regular programs were enriched in the Centennial year, including *Place aux femmes*, *Récital international*, and *l'Orchestre de Radio-Canada*, each in its own way contributing to the listener's knowledge of some facet of Canadian life.

Educational Functions of the National Film Board.—The National Film Board, an agency of the Federal Government, was established by Act of Parliament in 1939 and reconstituted by the National Film Act in 1950. In the years since its establishment, the Board has grown from a supervisory body over Canadian Government motion picture activities to a national documentary film-producing and -distributing organization whose films about Canada are seen wherever people may freely assemble. The Board produces and distributes filmstrips and still photographs on Canadian themes in accordance with its primary function outlined in the Act "to initiate and promote the production and distribution of films in the national interest". Films are produced primarily in the English and French languages and, whenever possible, foreign-language versions are prepared to increase the usefulness of Board films in foreign countries.

The 16mm. community film program is based on a nation-wide system of film circuits, film councils and libraries, strongly supported by organizations and individuals engaged in community activities. There are more than 700 national, provincial and community film distribution outlets from which thousands of 16mm. prints are available for public use throughout the country. These prints are acquired for circulation by purchase or by loan from the Board.

A large part of the 16mm. community film audience is reached through classroom showings, indicating progress in the development of audio-visual aid programs in Canadian schools and universities. Another noticeable trend is the more selective use of films by community organizations and groups for particular purposes. This is attributed in part to the availability of Board productions which present series of film studies related to central themes, and to the availability of a broad range of topics which include individual films particularly suited to group objectives and programs.

Films produced by the Board are shown in commercial theatres and on television in Canada and abroad, and newsreel features are also issued regularly for theatrical and television purposes. Distribution of theatrical subjects is arranged by contract with commercial distributing organizations.

Original films are shown regularly over English-language and French-language television networks in Canada. Individual films from the Board's extensive general library are available to CBC and privately operated stations. Abroad, because of expanding television facilities in many countries, Board films are seen by audiences which could not otherwise be reached.

In addition to commercial distribution through theatres and television in other countries, 16mm. print circulation is carried on through posts of the Departments of External Affairs and Trade and Commerce, through National Film Board territorial offices at London in England, Paris in France, New York, Detroit, Chicago and San Francisco in the United States, New Delhi in India, and Buenos Aires in Argentina, as well as through libraries operated by various education agencies. Hundreds of prints of National Film Board films are also sold in other countries each year. Exchange agreements are in effect between the Board and government film-producing organizations in other lands; this means that films of various nations are freely exchanged with those of Canada, aiding international understanding.

The National Film Board maintains a library of more than 150,000 still photographs, which are available at nominal cost to magazines, newspapers and other periodicals wishing to present current information about Canada.

Section 3.—The Canada Council

The Canada Council was created in 1957 by the Government of Canada, to "foster and promote the study and enjoyment of, and the production of works in, the arts, humanities and social sciences". It carries out its task mainly through a broad program of fellowships and grants of various types. It also shares the responsibility for Canada's cultural relations with other countries, and administers, as a separate agency, the Canadian National Commission for UNESCO.

The Council itself is an independent agency which reports annually to Parliament, through a member of the Cabinet, but sets its own policies and makes its own decisions within the terms of the Canada Council Act. It is made up of 21 members appointed by the Governor in Council. The Chairman and Vice-Chairman serve for terms not exceeding five years, and other members for terms of three years. The Council usually meets at least five times a year. The day-to-day administrative work is carried out by a permanent staff in Ottawa, headed by a director and an associate director who are appointed by the Governor in Council.

Income.—The Council's income is derived from three sources—an annual grant of the Canadian Government, interest from its Endowment Fund, and private donations. The largest source of income is the annual federal grant which amounted to \$17,000,000 for the year ended Mar. 31, 1968. This was the first annual grant made, but the policy was foreshadowed by an unconditional federal grant of \$10,000,000 made in April 1965. The federal action was accompanied by an announcement of generally increased aid to research, in recognition of the Council's program of aid to the humanities and social sciences; it will also make possible a needed expansion of the Council's aid to the arts. The second source of operating income is the Endowment Fund, of which only the interest may be used and which is expected to yield about \$3,400,000 in 1967-68. The original value of the Endowment Fund, established by Parliament when it created the Canada Council, was \$50,000,000. The most noteworthy, to date, of the special funds received from private donors is that from the estate of the late Dorothy J. Killam, which is expected to amount to \$16,000,000. Funds from private donations are used in accordance with the wishes of the donors.

Assistance to the Arts, Humanities and Social Sciences.—The Council's assistance is directed to both individuals and organizations. Assistance to individuals is mainly in the form of fellowships, scholarships and research grants. In its first ten years, the Council awarded scholarships and fellowships at the master, doctoral and post-doctoral levels to over 5,000 scholars in the humanities and social sciences, and to almost 1,400 performing and creative artists. Assistance to organizations, mostly in the arts, takes a large portion of the Council's revenues.

In 1966-67, the Council devoted approximately \$5,581,000 to the humanities and social sciences, of which \$3,565,000 financed 1,053 fellowships at the pre-doctoral and post-doctoral levels, and \$2,016,000 was applied to grants in aid of research, university libraries, meetings of scholars and artists, visiting lecturers, publication of scholarly works and other forms of assistance. In the arts, the Council spent \$4,352,000, of which \$594,000 was used to finance 186 scholarships and fellowships and \$3,758,000 was applied to grants, including about \$884,000 for music, \$415,000 for festivals, \$1,000,000 for the theatre, \$749,000 for dance and opera, \$469,000 for the visual arts and \$155,000 for publications. In accordance with growing need in these fields, and with the Canada Council's enlarged resources, aid has been increased considerably in the year 1967-68.

Special Programs.—Apart from its own programs, the Council administers on behalf of the Canadian Government a program of scholarships for students, scholars and artists from French-speaking countries (at present France, Belgium and Switzerland) wishing to come to Canada. In 1966-67, awards made by the Council under this program totalled \$630,000.

Prizes and Special Awards.—Under its power to “make awards to persons in Canada for outstanding accomplishments in the arts, humanities or social sciences”, the Council awards annually its own Canada Council Medal and the Molson Prize which is financed by funds from the Molson Foundation. It also finances the annual Governor General’s Literary Prizes, which are awarded by an autonomous committee.

UNESCO.—The Canada Council Act also provides for certain functions in relation to the United Nations Educational, Scientific and Cultural Organization (UNESCO). The Council has accordingly established a National Commission for UNESCO and provides its secretariat and budget. As an agent of the Council, the National Commission co-ordinates UNESCO program activities abroad, and administers a small program in furtherance of UNESCO objectives. In the year ended Mar. 31, 1967, the Council spent approximately \$167,000 through the National Commission for these purposes.

Section 4.—Library Services

The National Library.—The National Library of Canada came into existence formally on Jan. 1, 1953 by the proclamation of the National Library Act (RSC 1952, c. 330). On the same date it absorbed the Canadian Bibliographic Centre, which had been engaged in preliminary work and planning since 1950. The Act established a National Library Advisory Council consisting of the National Librarian who serves as Chairman, the Parliamentary Librarian and 12 appointed members, at least one of whom must be from each of the ten provinces.

The Library was housed for a long period in inadequate temporary quarters that limited its collections and activities. Construction of a permanent building, designed to accommodate both the National Library and the Public Archives, began in 1963 and was completed in the spring of 1967. The new structure, which has a floor area of 13 acres and was equipped initially with 81 miles of steel shelving, was opened formally by the Prime Minister on June 20. The book collection now consists of 400,000 volumes, supplemented by microcopies of more than 100,000 additional titles. Newspaper files formerly in several locations have been brought together and now form the largest collection in Canada.

The Library compiles and publishes *Canadiana*, a monthly catalogue of new books and pamphlets relating to Canada; more than 12,500 titles were listed in 1966.* *Canadiana* includes details of trade publications, official publications of the Government of Canada and the ten provinces, and of films and filmstrips produced in Canada.

The *National Union Catalogue* lists over 9,000,000 volumes in about 275 government, university, public and special libraries in all provinces. New accessions (which numbered over 750,000 in 1966-67) are reported regularly, and the Union Catalogue thus forms a continuously up-to-date key to the main book resources of the country. During the year ended Mar. 31, 1967, the Reference Division was asked to locate more than 49,000 titles, and it is noteworthy that copies of 80 p.c. of them were found in Canadian libraries.

The Library is completing a union list of serials in the fields of the humanities and social sciences that are being received currently by Canadian libraries, planned for publication in 1968. This list is a first step toward a complete union list of such serials in the humanities and social sciences that will complement the *Union List of Scientific Serials in Canadian Libraries* published by the National Science Library. The Library is also preparing for early publication a retrospective *Bibliography of Canadiana, 1867-1900*, which will list more than 25,000 titles.

* A list of 400 selected titles of “Books About Canada”, prepared by the National Library, appears in Chapter XXVII of this volume.

The National Science Library.—The National Science Library has two closely related roles—it serves the staff of the National Research Council engaged in pure and applied research, and it serves the entire scientific and industrial community of Canada by supplementing local and regional resources and services.

Plans for developing a central scientific library were proposed as early as 1924 by the Honorary Advisory Council for Scientific and Industrial Research, established in 1916 and now known as the National Research Council (see pp. 403-411). The Library grew slowly until 1928 when the Council's first research laboratories were set up. Since then it has been developed to parallel the growth and expansion of the laboratories and the national interests and activities of the Council with the result that in 1953, under an agreement with the more recently established National Library, the National Research Council Library formally assumed responsibility for national library services in the fields of science and technology. This responsibility was confirmed by Act of Parliament in 1966 (SC 1966-67, c. 26). In 1967, the President of the Association of Canadian Medical Colleges recommended to the Government that responsibility for national services in the medical and health sciences be assigned to the National Science Library. This recommendation endorsed the proposals of a study group made up of the deans of medical schools, medical librarians and representatives from the Medical Research Council and other appropriate government agencies.

The Library's collection, which is doubling in size every ten years, comprised over 683,000 volumes by the end of the year Mar. 31, 1967. The bulk of this material, including journals and other serials, books, pamphlets, and technical and research reports (many in microform), is housed in the main Library with smaller and more specialized collections in seven branch libraries.

The resources of the Library are made available by means of an extensive inter-library loan and photocopying service. For purposes of current awareness, the Library issues twice a month its *Recent Additions to the Library*, and a list of *Serial Publications in the Library* is also issued at frequent intervals through the use of data processing equipment. Reference and research services include answering requests for scientific information, literature searches and the compilation of abstracts and bibliographies, and the identification and location of obscure publications.

The Canadian Index of Scientific Translations, a card index to the location of completed English translations in Canada and other countries, is maintained by the Library. Translations of scientific articles prepared by the Library's Translations Section are listed and made available in Canada and abroad. A complete English translation of the Russian journal *Problemy Severa* (*Problems of the North*) is also the responsibility of this Section.

The National Science Library is responsible for the publication of the *Union List of Scientific Serials in Canadian Libraries* and the *Directory of Canadian Scientific and Technical Periodicals*.

Public Libraries.—Provincial governments have jurisdiction over public libraries but these are generally administered and regulated by municipal authorities; exceptions are Newfoundland and Prince Edward Island where the provincial governments maintain the public library service throughout the province. Municipal libraries serve the urban population and provincial and regional libraries serve the more widely scattered population. Summary results of the annual public library survey for 1965 are given in Table 1, with comparable totals for 1964. Circulation of books was 4.0 per capita in both years and current operating payments were \$1.53, in 1966 and \$1.40 in 1964. The full-time staff of the libraries numbered 3,464 in 1965, of whom 742 or 21.4 p.c. were professional librarians.

1.—Summary Statistics for All Public Libraries, 1965 with Totals for 1964

Province or Territory	Population Served	Libraries	Stocks of Books, Periodicals and Pamphlets	Circulation	Current Operating Payments	Full-Time Staff

University, College and School Libraries.—Libraries in 79 universities and colleges having enrolments of 100 or more students reported more than 11,000,000 volumes in 1964-65. Because of the larger enrolment served, the number of volumes per student declined from 63.9 in 1963-64 to 57.8 in 1964-65. However, expenditures per student increased from \$90.08 to \$98.89 in the same comparison. The full-time staff was 489 higher but the proportion of professional librarians employed was slightly lower at 28.3 p.c.

2.—Libraries in Universities and Colleges, by Province, Academic Year 1964-65 with Totals for 1963-64

Totals, 1963-64.....	77	10,225,891	160,072	90.08

¹ Full-time and equivalent.

In 1964-65 only 44.1 p.c. of the reporting 5,882 elementary and secondary schools had centralized libraries. Their total bookstock was 7,585,163 or 5.1 books per pupil served, approximately the same as in the previous year. Payments for books and other library

materials ranged from \$1.06 per pupil served in Newfoundland to \$5.88 in Saskatchewan, the average for Canada being \$2.86. Professional school librarians employed numbered 263, an increase of 12.5 p.c. over 1963-64 but still far short of requirements. In an attempt to fill part of the need, some professional librarians supervised several school libraries.

3.—Centralized School Libraries, by Province, School Year 1964-65 with Totals for 1963-64

Province	Libraries	Books	Enrolment Served	Payment for Books per Pupil
	No.	No.	No.	\$
Newfoundland.....	9	14,107	4,701	1.06

Libraries in provincial post-secondary institutions surveyed in 1964-65 included libraries in 66 technical institutes and trade schools across Canada, 69 *écoles normales* in Quebec, 10 teachers' colleges in Ontario and one each in Nova Scotia and New Brunswick. In the 66 technical institutes and trade schools, bookstock per pupil was 12.0 volumes and operating expenditures per pupil \$19.55. The 69 *écoles normales* in Quebec reported 8,332 students, 79.7 volumes per student, and an operating expenditure of \$34.16.

¹ Includes statistics of 66 technical institutes and 81 teachers' colleges.

Library Education.—In 1966, the five Canadian library schools awarded 309 Bachelor of Library Science degrees. Many more professional librarians are needed to raise service to acceptable standards, especially in public and secondary school libraries. Table 5 contains data on 308 of the graduates, 67.9 p.c. of whom were women. University libraries absorbed 44 p.c. of these graduates, 31 p.c. secured positions in public libraries and the remainder now serve in government and special libraries or in other countries. Quebec and Ontario employed 65 p.c. of them. Median beginning salaries ranged from \$5,600 in Quebec to \$6,000 in Ontario and British Columbia. School librarians received almost \$1,800 more per annum than public librarians since the former often have teacher training as well as teaching experience.

5.—Library School Graduates, 1966 with Totals for 1965

Library School at—	Graduates		Destinations				Median Beginning Salary
	Male	Female	Public Library	University Library	School Library	Other and Unknown

		SECTION 6. FEDERAL GOVERNMENT EXPENDITURES ON SCIENTIFIC ACTIVITIES.....	431

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. xvi of this volume.

The characteristic problems of this country, particularly its large area, its small population and its unique industrial structure, have led to a typically Canadian organization of research. Early research was, of course, related to the primary industries. Geological mapping and agricultural research were almost the only areas of activity until the beginning of the present century. In 1898 research in the field of fisheries was assigned to an independent honorary board which has continued to the present as the Fisheries Research Board. In 1916 the Federal Government set up the National Research Council; its early duties were to encourage and stimulate research in the universities through grants and scholarships and it entered active research only with the establishment of its own laboratory system in the late 1920s and early 1930s. Great expansion in scientific research took place during the War when the National Research Council assumed the responsibility for research for the three Armed Services including the development of atomic energy. At the end of the War, the Council returned to its previous activities—the promotion of research in the universities and research for secondary industry. In 1947, the Defence Research Board was set up in the Department of National Defence with responsibility for military research (see Chapter XXVI). In 1952, the Crown corporation, Atomic Energy of Canada Limited, was established to proceed with the development of atomic energy in Canada, and certain other Crown corporations, such as Eldorado Mining and Refining Limited, Polymer Corporation Limited and Canada's largest national utility, the Canadian National Railways, developed important research programs.

Until the 1960s, industrial research was slow to develop in Canada, although certain large industries, particularly the chemical industry and the pulp and paper industry, had long histories of successful research effort. Research councils or foundations were set up by several provinces to improve industrial production efficiency (see pp. 422-424); of these, the Ontario Research Foundation and the British Columbia Research Council, although established under provincial legislation, are self-governing institutions engaged in research and development on contract for manufacturers, departments of government and on their own account, and derive their current revenue mainly from sponsored research. The Pulp and Paper Research Institute of Canada (see Forestry Chapter) is the one major research association that operates on a co-operative basis; its operating funds are provided by industry and its facilities by the Federal Government and McGill University, all three

vitaly interested in ensuring that this industry maintains its competitive position in world markets. However, through the years the primary resource base of industry generally was not conducive to the establishment of industrial research laboratories. Also, the prevalence of foreign-owned manufacturing companies exerted considerable influence on the development of industrial research. Canadian subsidiaries of foreign companies had ready access to the research and development results of their parent companies and Canadian companies had little incentive to establish their own laboratories or to develop products specifically for the Canadian market. But now, Canadian industry across the country is greatly extending research facilities and becoming much more aware of the advantages to be gained therefrom. To meet the challenge of competition from other countries in the manufacture of ultra-modern production, it is impressively stepping up its own scientific and technical studies. The Sheridan Park Research Community, just outside Metropolitan Toronto, is an example of the latest concept for improving the efficiency of industrial research undertaken in Canada. A somewhat similar development has taken place at Pointe Claire, near Metropolitan Montreal. Industrial research centres of this type greatly facilitate the applied scientific process for the scientists involved by permitting ready interchange of non-proprietary scientific information and ready access to a wide variety of instrumentation, equipment and skills. They also provide an attractive environment for scientific personnel, and thus increase Canada's potential for keeping its trained scientists. At Sheridan Park the research laboratories of nine individual companies are now in full operation and there is room for further corporate participants. A Conference Centre is being built, and the community members have formed themselves into an Association to promote and expedite many other mutually desirable arrangements.

Thus, there are three main sectors of research in Canada—government research, university research and research in industry. These three elements are covered in some detail in the following Sections and Subsections.

Mechanism for the Federal Science Policy.—In the federal sphere, the ultimate authority for policy on science resides in the Cabinet. To exercise this authority there was established by the Research Council Act (RSC 1952, c. 239, as amended) a Cabinet committee known as the Committee of the Privy Council on Scientific and Industrial Research. This Committee comprises those Cabinet Ministers having departments with major scientific responsibilities and certain other Ministers who have an indirect concern with scientific affairs. These federal departments and agencies advise the Privy Council Committee on the scientific aspects of their own departmental responsibilities and on the organization and support of research required for their own purposes. For many years, the National Research Council, on the other hand, advised the Committee on general science policy, particularly on research in the universities, in industry and in fields not specifically the responsibility of the departments or agencies. Then, in 1949, the Privy Council Committee broadened the structure of its advisory mechanism by the addition of an advisory body of senior officials to which it might turn for joint advice on the formulation and conduct of government scientific policies.

In 1964, as a result of the recommendations of the Royal Commission on Government Organization, a Science Secretariat was created in the Privy Council Office with the task of assembling and analysing information on the Government's scientific and technological activities, including interrelationships with university, industrial and provincial scientific establishments. In 1966, the Government established the Science Council of Canada with the duty of assessing Canada's scientific and technological resources, requirements and potentialities, and making recommendations thereon. The Science Council is concerned both with research and with the use of science and technology in the solution of Canada's economic and social problems. It reports to the Prime Minister and draws its membership from industry, the universities and government, and its professional and administrative support from the Science Secretariat. In its first year, the Council initiated intensive studies of science and technology in Canada to provide a basis for advice on the formulation of policies and plans for the future.

Section 1.—The National Research Council of Canada*

Organized research in Canada on a national basis dates from 1916 when the Government of Canada established the National Research Council. From an initial budget of \$91,600 (only \$50,375 was actually expended) to one of \$89,000,000, the Council has expanded until now it has some 45 Associate Committees studying a wide range of problems, supports the research efforts of 2,500 university scientists and awards 1,900 scholarships, bursaries and postdoctorate fellowships. In recognition of its activities in support of research in the universities during the past 50 years, the Council has established a group of scholarships called the 1967 Science Scholarships, awarded for the first time in 1967. These awards are intended to encourage young men and women of outstanding intellectual promise to pursue postgraduate studies and research leading to doctorate degrees in science and engineering in Canadian universities other than the ones from which they obtained their first degrees. It is hoped that these awards will stimulate exchanges between different cultural and geographical regions of Canada, in keeping with the aims of the commemoration of the 1967 Centennial of Confederation.

The planning and integration of research work, organization of co-operative studies, postgraduate training of research workers, and prosecution of research through grants to university professors formed the basis of the Council's work from 1916 to 1924. As early as 1918, the creation of a central research institute to carry on research in pure science in relation to standards of measurement, quality and composition of material, and research in science applied to the industries of Canada, had been urged and a special committee of Parliament endorsed the proposal. Temporary quarters were secured in 1925 and research on magnesian refractories for steel furnaces was carried out so successfully that an industry established during World War I was re-established on a large scale. As a result of this achievement, the Government in 1929-30 provided funds for new research facilities. The National Research Building on Sussex Drive in Ottawa was opened in 1932 and in 1939 construction was begun on an aerodynamics building located on the Montreal Road, just east of the city. This site now comprises some 400 acres and houses most of the Council's laboratories. A prairie Regional Laboratory built on the campus of the University of Saskatchewan in Saskatoon has been in operation since June 1948 and an Atlantic Regional Laboratory on the campus of Dalhousie University in Halifax since June 1952.

Under the terms of the Research Council Act, the Council has charge of all matters affecting scientific and industrial research in Canada that may be assigned to it by the Committee of the Privy Council on Scientific and Industrial Research. In discharging these responsibilities, the Council may undertake, assist or promote research. Its duties include the utilization of Canada's natural resources; the improvement of industrial processes and methods; the discovery of processes and methods likely to expand existing industries or to develop new ones; the utilization of industrial wastes; investigation and determination of physical standards, methods of measurement, and fundamental properties of matter; the standardization and certification of scientific and technical apparatus used by government and industry; the determination of standards of quality for materials used in public works and government supplies; investigation and standardization, at the request of industry, of industrial materials or products; and research intended to improve conditions in agriculture. As a service to Canadian science, the Council maintains scientific liaison offices in Ottawa, London, Washington and Paris. The liaison officers abroad also serve as scientific attachés in the Canadian diplomatic missions. The National Research Council Library, with holdings of more than 683,000 volumes in science and technology (including 15,000 journals and other serials), acts as the National Science Library of Canada (see also p. 397).

The Council's laboratories are organized in ten divisions and two regional laboratories, each with its own director. Six divisions are engaged in applied and fundamental studies in the natural sciences—biosciences, applied and pure chemistry, applied and pure physics and radiation biology. Four others are devoted chiefly to engineering work—building re-

* Revised by Joan Powers Rickerd, Public Relations Office, National Research Council of Canada, Ottawa.

search, mechanical engineering, radio and electrical engineering, and the National Aeronautical Establishment. The two regional laboratories carry out research related to the resources of the Prairie and Atlantic regions. A Medical Research Council, responsible for the support of medical research but functioning under the general administration of the National Research Council, was established in November 1960 (see p. 302).

The National Research Council consists of the President, two Vice-Presidents (Scientific), one Vice-President (Administration) and 17 other members, each of the latter group being appointed for a term of three years and chosen to represent industry, labour, and research in science and engineering. Many of the members are drawn from Canadian universities. The Council reports to the Committee of the Privy Council on Scientific and Industrial Research through a Minister designated by the Governor in Council for the purposes of the National Research Council Act.

The Council's 1966-67 budget, excluding the provision for the activities of the Medical Research Council, is about \$89,000,000, approximately \$34,000,000 of which is required for foundation work—scholarships and research grants in science and engineering. The remainder is used to operate the laboratories and to provide for the Council's industrial research assistance program. Of the Council's 2,919 employees, 838 are scientists and engineers.

Links with Industry.—The application of science to Canadian industry has always been one of the major concerns of the National Research Council. Since 1917, representatives of industry, government and the universities have co-operated, through NRC Associate Committees, in solving pressing industrial and economic problems. There is a constant flow of personnel and information between NRC laboratories and those of industry, and roughly 70 p.c. of the Council's own effort involves applied research intended for industrial use. Contract research on specific projects and a wide variety of testing and standardization work are undertaken. Inventions from NRC laboratories are carried through the patent stage, then made available for manufacture through Canadian Patents and Development Limited (see p. 144).

A most important activity of the Council is its Technical Information Service, which consists of field engineers who visit manufacturing establishments, and a staff of trained researchers in Ottawa who use the technical literature available through the Council's Library. Although all inquiries are handled, the Service is particularly interested in helping small firms with no research or information facilities. Free advice is given on all aspects of materials and processing, equipment, plant design and packaging and on such topics as wage incentives and inventory control.

Direct financial assistance for research performed by Canadian industry was begun by the Council during 1962. Under this arrangement the Council makes grants supporting long-term applied research and development work proposed and carried out by industry. Aid is given on a shared-cost basis, with industry supplying at least half the funds for any one project. Companies of all sizes, representing a wide range of industrial activity, are eligible for assistance and the companies retain all rights arising from the work. In 1966-67, at a cost of \$5,300,000, the Council supported 31 new research projects and 118 continuing projects in 91 Canadian firms. This work gave rise, also, to over 700 new research positions.

Biosciences.—The program of the Division of Biosciences covers practical problems related to the national economy and fundamental studies that may contribute useful information in such areas as agriculture, medicine and certain industries. Apparatus and techniques for preparing, preserving and storing food make up a large part of the applied work and particular attention has been given recently to food freezing, cold storage in jacketed rooms and refrigerated transport. Study and testing have continued on a process now widely used in industry for the immersion freezing of poultry, quality loss in poultry meat during freezing and refrigerated storage, and an improved cooling system for frozen food trucks. The physical and chemical reactions influencing coagulation in

evaporated milk during sterilization are being investigated. Microorganisms related to food are studied, particularly those that grow in cheese, in high salt concentrations and at low temperatures. Model systems for the study of freshwater microbial ecology are under investigation. A national culture collection of about 3,000 yeasts, bacteria and fungi is maintained.

Considerable effort is devoted to questions of animal and plant physiology. Studies of the mechanisms by which mammals, birds and man adapt to cold have provided important basic information on cell, muscle and metabolic activity, and help to explain practical problems such as the high death rate of newly born caribou. Fundamental plant processes such as translocation are investigated, and a study is being carried out on strains of blue-green algae believed responsible for cattle deaths. Plant fibres such as cellulose—the skeletal material of plants—and the structure and function of plant cell components are also examined.

Other studies involve fermentation mechanisms and enzymology, and the structures of proteins, polysaccharides and lipids. One group, among its other projects, is engaged in long-term statistical studies of protein variability in wheat, a factor that influences overseas wheat sales. The work has been expanded recently to include the effects of weather factors on protein content.

Radiation Biology.—The general objective of the Division of Radiation Biology is to undertake fundamental research into the effects of radiation on living things and their components. This is best done by combining the efforts of scientists in several biological disciplines. The Division is still in its formative stage, awaiting the completion of a new laboratory at the end of 1967.

To date, biochemical studies have included theoretical studies of radiation doses resulting from internal contamination of workers, the action of X-rays on purified enzymes, the action of ultraviolet light on nucleic acid components, and the metabolism of radioactive tellurium in animals. The most prominent causes of death of animals or men from exposure to ionizing radiations are destruction of the blood-forming tissues (spleen and bone marrow) and severe damage to the intestinal wall; in addition, sub-lethal doses of radiation cause immediate destruction of lymphatic tissues such as the thymus gland. Therefore the Division has devoted considerable effort to investigating the effects of gamma-rays on these three types of tissues.

Applied Chemistry.—The Division of Applied Chemistry is concerned with supplying new scientific information for the development of Canada's natural resources and chemical industries. Although formerly much of the work involved the solving of immediate specific problems, a larger part of the effort is now being devoted to more basic studies. This avoids conflict with industrial laboratories and consultants and, in addition to providing fundamental information, often produces practical results. For instance, a long-term investigation on the contacting of fluids and solids—an operation vital to many chemical engineering procedures—has resulted in a successful commercial operation for drying grain. The same method has been extended to chemical reactions and to removing liquids from other materials.

Another long-term project of considerable industrial potential has concerned the factors responsible for the stability, or the destruction, of suspensions of solids in liquids and a method was devised for easily separating almost any suspended solid from the liquid surrounding it. The same technique can be used to prepare dense spherical agglomerates of selected composition. Work on separation processes has been expanded to include the separation of dissolved solids. It has been shown that virtually all dissolved salts can be removed from water by filtration through an appropriate medium, and tests with other materials are in progress. Then, too, the study of chemical reactions at very high pressures—carried on over the past several years—has resulted in the successful preparation of a stable polymer that could not be produced by conventional means. The development of a procedure for anodically depositing metal oxide films resulted from

long-term studies on metallic corrosion. These films may have considerable potential as decorative or protective coatings, or to impart desirable electrical properties to the deposited layer.

The 11 sections of the Division are: analytical chemistry, chemical engineering, colloid chemistry, high polymer chemistry, high pressure, kinetics and catalysis, metallic corrosion and oxidation, metallurgical chemistry, physical organic chemistry, hydrocarbon chemistry and textile chemistry. Much of the work falls under the general headings of petroleum or metal chemistry, in that several sections work on topics related to one of these fields.

Pure Chemistry.—The Division of Pure Chemistry has a small permanent staff that works in collaboration with about 50 young postdoctorate fellows from all over the world. The work consists of long-term fundamental investigations in organic, physical and theoretical chemistry designed to provide new basic knowledge.

The work in organic chemistry includes investigations of the structures of alkaloids, studies of the infrared spectra of steroids, and the synthesis of nucleic acids, porphyrins and of compounds labelled with isotopes. Other groups deal with chemical kinetics and photochemistry, the study of the ionization potentials of free radicals by mass spectrometry, Raman and infrared vibrational spectroscopy, organic crystal semi-conductors, and the application of high resolution proton magnetic resonance techniques to the study of hydrogen bonding and other molecular interactions. Still others investigate the thermal properties of simple solids, the heats of micellization by microcalorimetry, and the thermodynamics and stress-strain relationships associated with the adsorption of fluids by active carbons. Theoretical studies cover quantum-mechanical and many-body problems.

Applied Physics.—The work in applied physics is divided between research in fields of physics deemed most likely to contribute in a practical way to the Canadian economy and research to improve the accuracy and precision of fundamental physical standards on which all measurements are based. All the fundamental physical standards for Canada are the responsibility of the Applied Physics Division, which has primary standards equal to any in the world in the fields of mass, length, time, electricity, temperature, photometry and radiation. The sections of the Division are: acoustics, diffraction optics, electricity, heat and solid state physics, instrumental optics, interferometry, mechanics, photogrammetric research, radiation optics, and X-rays and nuclear radiations.

Examples of specific projects under way include a study of physiological noise and its relationship with the threshold of hearing, resulting in the development of a new probe microphone which should find wide application in sound measurement; new precision and accuracy are envisaged for audiometers of great importance in connection with hearing loss in industry and elsewhere; researches directed toward improving the resolving power of optical systems, the design of a hydrogen maser offering potential as a frequency standard for defining time, measurements on various metals and ceramics aimed at elucidating the mechanism of heat transfer at high temperatures, the establishment of an international standard neutron source, and investigation and application of the very intense and very monochromatic radiation emitted by gas lasers. Several of the Division's developments are being produced commercially; among these are noise-excluding ear defenders, a revolutionary analytical plotter for making maps from aerial photographs (available in two models—one for military and the other for civilian use), six- and five-figure potentiometers, a precision direct reading thermometer bridge, an instrument for measurement of resistance to a precision of one part per million, and a new instrument for measuring more accurately and quickly electrical voltages of up to 3,000 volts.

To permit standardization of X-rays and nuclear radiations at higher energies and for general research in the energy range, the Division is currently installing a 4-MeV Van der Graaff generator and a 40-MeV linac facility which will be in full operation sometime in 1968.

Pure Physics.—Investigations are under way on cosmic rays and high-energy particle physics, solid state physics, laser and plasma physics, spectroscopy, and X-ray diffraction. The work is on fundamental problems which do not have immediate application but advance the frontiers of knowledge and supply the basis for further progress in the applied fields. Important advances in the study of cosmic rays and energetic particles are being made by means of a specially designed instrument package operating aboard the Canadian earth satellite *Alouette II*. The package is sending back vital new information about the Van Allen radiation belts and about the artificial belts created by atomic explosions.

The solid state group studies the electrical, thermal and mechanical properties of metals and semi-conductors especially at very low temperatures. The laser and plasma physics group, established in 1962, has already made an important contribution by observing the scattering of a ruby-maser beam by a plasma. This study leads to a determination of electron temperature and electron concentration. In the spectroscopy group, the structures of atoms and molecules are investigated by means of their microwave, visible and ultra-violet spectra, and considerable work has been done on optical masers.

The X-ray diffraction laboratory undertakes fundamental work in molecular and crystal structure and identification problems for government laboratories. Two of the major projects concern narcotics and vanadium minerals. X-ray diffraction methods are extremely valuable for identification purposes as they are non-destructive and require only very small amounts of material.

Building Research.—The provision of a comprehensive research service for the construction industry of Canada is the primary concern of the Division of Building Research. Its program therefore covers various aspects of construction, building design, building materials and components, fire research, and studies in soil, snow and ice mechanics; it also serves as the technical research wing of the Central Mortgage and Housing Corporation. Regional stations located at Halifax, N.S., Thompson, Man., Saskatoon, Sask., Vancouver, B.C., and Inuvik, N.W.T., assist in the research and information functions of the Division.

Division projects are concerned with: the behaviour of cement, concrete, mortars, plasters, plastics and sealing and caulking compounds; atmospheric corrosion of metals and paint research; acoustics research; the over-all performance of foundations, walls, windows and roofs; humidity in buildings; air-conditioning design; snow and wind loads on structures; the properties of various soil types including permafrost and muskeg; and the effects on buildings of ground vibrations caused by earthquakes. A fire research laboratory contains facilities for studying the initiation, development and extinguishment of building fires as well as for fire tests on materials and structures.

Because concentration is placed on building problems peculiar to Canada, much of the work concerns the performance of buildings and building materials in cold weather. Double-glazed windows and lightweight metal and glass curtain walls, used increasingly in modern buildings, have been examined, improvement of winter building techniques have been studied, and the work of one section is devoted to problems of building in the Far North. Educational work is conducted in a number of directions to alert the designers, manufacturers and others to new principles and new information as well as to design features that should be avoided. Similar liaison exists with federal and provincial public works departments and many useful field studies have been made on public and privately owned buildings.

Many results of the Division's research are used in the improvement of the National Building Code, an advisory document offered as a model building by-law, and now used by municipalities accounting for about three quarters of the urban population of Canada. The Division also provides the secretariat and considerable technical assistance to the Associate Committee that produces the Building Code on behalf of the National Research Council.

Mechanical Engineering.—Although this Division of the National Research Council is concerned broadly with problems in mechanical engineering, the form of current developments in Canada naturally requires a reasonably sharp specialization within this broad field. Despite pressure in the engineering world for immediate results, it is essential that this type of work be supported by a substantial foundation of general research.

In the present vigorous stage of engineering development in Canada, the general work of the Division is being related to the thermodynamic aspects of engineering production by conventional machinery and by application of fluid mechanical principles to the generation of extreme temperatures in high pressure gases. In support of the human contribution to higher productivity, the other general body of work relates to the behaviour of the human operator—his dexterity and capability and the effects on his performance of fatigue, lack of sleep, and alcohol. The more specific activities of the Division are related to processes of production and to transportation.

Production.—The primary production activities of the Division are comparatively recent and pertain to the development of instrumentation for assisting in the refining of copper. This work is supplemented in the metallurgical field by the modelling, by computer techniques, of the refining processes for steel production.

In the manufacturing aspects of mechanical engineering, the Division has long been active in the solution of problems—both thermodynamic and mechanical—of the different kinds of heat engines and is concentrating on matters particularly pertaining to diesel engines and gas turbines. It is introducing in its Experimental Shops improvements and refinements in a number of manufacturing processes, such as the precision grinding of gearing, electrodischarge machining, and electrochemical machining, which experimental work may prove of interest and use to various manufacturers. As a subsidiary part of the work on manufacturing techniques, the Division has in hand a substantial body of development work related to the improvement of surgical instruments and apparatus, the first of which is now going into commercial production.

Transportation.—Because the dimensions, topography and trade pattern of Canada render all forms of transportation of primary consequence to the economic and social well-being of the country, there has been, for a number of years, substantial research activity in this direction. The land transport work has arisen from problems with urban bus systems and from problems (mostly mechanical) arising from railway operations. Programs are under way or completed relating to the operation of diesel locomotives on a wider range of fuels, to the improvement of air brake operation in winter, to the braking and running smoothness of long trains, and, recently, to the improvement of remote switching necessary for Central Traffic Control.

In the area of sea transport, the Division is concerned with ship design and canal and harbour facilities arrangements. In the former category, a steady procession of new designs passes through the Ship Laboratory for investigation of hull lines, propeller design, steering and rough water characteristics, supplemented by a program of work at sea on the stresses on ships due to running in rough water. Regarding the improvement of harbours, work is vigorously under way on a model of the St. Lawrence River extending from Montreal to Father Point, the object of which is to lend the maximum possible scientific impetus to the development of the Port of Montreal.

In the field of air transport, the problem confronting Canadian manufacturers is the selection of types of aircraft which can be sold in sufficient numbers in world markets to justify the development costs. Although there is always doubt concerning the best course of action to be followed in this type of venture, the activities of the Division are being concentrated on acquiring a reasonably wide-based and intimate knowledge of the possible machinery arrangements for civil vertical take-off aircraft, which are believed to represent one of the great aeronautical opportunities of the future in both rural and inter-urban types of operation.

Since many of the Division's facilities are not duplicated elsewhere in Canada, it is part of the working policy of the Division to assist manufacturers with the testing of a great variety of products.

National Aeronautical Establishment.—The National Aeronautical Establishment conducts aeronautical research to meet the needs of military and civil aviation, working in co-operation with the Canadian aircraft industry; it also carries out its own research program. Its studies therefore centre around problems of aerodynamics, aircraft structures and materials, and flight mechanics. It has the only development wind tunnel facilities in Canada and is thus equipped to handle most of the industrial or military aircraft developments of the foreseeable future. Aerodynamics research from low speeds up to about $4\frac{1}{2}$ times the speed of sound is carried out in the wind tunnels; considerable attention is being given at present to low-speed problems of vertical and short take-off aircraft. Other studies include work on the aerodynamic characteristics of high-thrust propellers, on wings with submerged fans and on wings immersed in powerful slip-streams. The research on structures and materials involves investigation of aircraft accidents, the theory of structures, fatigue and fracture, flight loads statistics and aircraft hydraulics. The flight mechanics program covers research on flight safety and flying stability and control, the development of a crash position indicator for locating crashed aircraft, atmospheric physics, anti-submarine magnetometry, and the avoidance of aircraft collisions.

A growing and highly diversified program of assistance to smaller industries is developing, the work relating mainly to product development, product improvement or testing. Concerning aircraft utilization, efforts have been directed toward those areas of national activity where aerial methods might offer economies in cost or improvements in effectiveness, such as agricultural applications, forest fire fighting, aerial logging, high sensitivity magnetic surveys, precipitation physics, and studies of atmospheric turbulence.

Radio and Electrical Engineering.—The work of this Division includes electrical engineering problems of interest to industry and fundamental research in electrical science. The Division co-operates with the Armed Services and associated industries in designing, producing and evaluating new equipment.

The engineering program includes studies of corona loss and radio interference from extra-high-voltage direct-current transmission lines, rocket telemetry, antenna development, electromedical instrumentation, electronic aids to navigation, and high-frequency standards. The Division maintains the best-equipped antenna laboratory in Canada and provides considerable assistance to Canadian industry in the development and manufacture of new antennas and radomes. Examples of recent developments by the Division are a compact transistorized marine radar for use by pleasure craft and fishing vessels, an underwater crash position indicator for locating submerged aircraft, an area display electrocardiograph showing the time variation of heart voltage between 70 points on the body, and a creative tape recorder much in demand by electronic music studios. A highly mobile counter-mortar radar designed by the Division went into commercial production in 1961.

Fundamental studies are carried out in the fields of radio astronomy, upper atmosphere research, electron physics, and solid state physics. At the Algonquin Radio Observatory in Algonquin Park, Ont., a radiotelescope having a parabolic reflector 150 feet in diameter has been in operation since mid-1966 and has proved to be the best of its size in the world.

Space Research Facilities.—The function of the Space Research Facilities Branch of the National Research Council is to develop and provide facilities to meet the needs of the upper atmosphere and space research programs of Canadian scientists in universities and government agencies (see pp. 417-419). At present its work is restricted primarily to the use of sounding rockets. The major facility is the Churchill Research Range which is operated for the benefit of Canadian and American scientists and has a joint Canadian-American funding. It has capabilities for launching many kinds of sounding rockets and

balloons carrying scientific experiments to investigate the earth's upper atmosphere. Associated ground-based instruments are available to study the aurora borealis by photographic and spectro-photometric methods. The Branch also operates the satellite tracking and data reception station near St. John's in Newfoundland and the Great Whale Geophysical Station at Poste-de-la-Baleine in Quebec.

The Branch is generally responsible for the implementation of the sounding rocket program, providing the vehicles and incorporating the scientific experiments into suitable payloads, with associated telemetry and other devices; this work is carried out mainly by industrial contracts. The work of the Branch also includes the reduction of flight data to provide vehicle trajectory and attitude information to experimenters, and the provision, from the telemetered information recorded on magnetic tape, of data required by individual scientists in any form desired.

Atlantic Regional Laboratory.—The Atlantic Regional Laboratory is engaged in practical and fundamental studies in chemistry and biology, which are related to the resources and industries of the Atlantic Provinces. Such studies include investigations of: the biochemistry and physiology of marine algae, fungi, bacteria, lichens, mosses and higher plants; the chemistry of naturally occurring organic compounds; and the physical chemistry of inorganic compounds at high temperatures. A major objective is to develop varieties of seaweeds with enhanced commercial value and to investigate the growth and cultivation of seaweeds and other marine algae. Surveys are being made to reveal new sources of seaweeds. An applied project on toxic microfungi in pastures is being carried out in collaboration with the Canada Department of Agriculture at Nappan, N.S. Fundamental studies on inorganic reactions at high temperatures are expected to give information of value to the steel and glass-making industries. Research in organic reactions includes work on methods of synthesis which may eventually have industrial value. Some of the work in biochemistry and physiology is related to medicinally important compounds such as antibiotics and drugs that affect mental processes.

The Laboratory has a close working relationship with Dalhousie University at Halifax, under which arrangement students acceptable to the University's Faculty of Graduate Studies may carry out research in the Laboratory under the direction of Laboratory staff members holding unpaid appointments in the Faculty. The immediate aim of this arrangement is to expand the facilities for graduate studies in the Atlantic region; the long-term objective is to help create a strong scientific background conducive to large-scale development by industry.

Prairie Regional Laboratory.—One of the aims of the Prairie Regional Laboratory is to develop wider uses for crops grown on the prairies by determining potential uses of crops now in production and by encouraging the production of new crops to meet specific needs. The Laboratory program is carried out by five sections: the physiology and biochemistry of fungi section, physiology and biochemistry of bacteria, plant biochemistry, chemistry of natural products, and the engineering and process development section. Research is therefore carried out on the properties and reactions of plant components, and on the biological, chemical and engineering processes for turning them into other compounds. The development of oil-seed crops as alternatives to seed crops has received considerable attention.

For some time, the Laboratory has studied major plant constituents such as carbohydrates, protein, starch, lignin and fibres. An example of this work is the definition of the chemical structure of several polysaccharides found in cereal grains and important in baking, milling and fermentation technology. Attention is also being given to minor plant constituents, such as phenols, flavonoids and terpenes, which are known to have fungicidal and germicidal properties. A laboratory has been set up for the systematic study of extractives from local plants and shrubs.

Developments from the Laboratory attracting commercial interest are: the production of feed supplements by direct use of microorganisms, and specific essential amino acids

such as lysine; poly-hydroxy alcohols such as glycerol and arabitol; hydroxy fatty acids; and the possibilities of producing specific glyceride types using the enzyme systems of microorganisms. The Laboratory works in co-operation with the Canada Department of Agriculture to help maintain Canada's position as the world's leading exporter of rapeseed, used to produce cooking oils, dressings and oil for use in margarine and shortening. A group working in the field of mycology is concerned with the production of new chemicals, antibiotics, alkaloids and amino acids.

Section 2.—Research in the Atomic Energy Field*

Recent Developments and Prospects.—The first major fruits of Canadian atomic energy research now appear close at hand. The Hydro-Electric Power Commission of Ontario is constructing a multi-unit nuclear electric generating station at Pickering near Toronto. Each unit will generate 500 megawatts (1 megawatt = 1,000 kilowatts) and, beginning in 1970, it is planned to bring into operation the first four units at yearly intervals. Estimates indicate that the power will be generated for less than four mills (0.4 cents) per kilowatt hour and will be competitive with that from other available types of thermal generating station. The Quebec Hydro-Electric Commission is also entering the nuclear field with a 250-megawatt prototype nuclear generating station of advanced design. Like the earlier CANDU (Canadian Deuterium Uranium) reactors, the design employs natural uranium as the fuel and heavy water as the moderator but the heat will be carried from the fuel by boiling ordinary water instead of by heavy water at a pressure sufficient to prevent boiling. The design is distinguished by the title CANDU-BLW-250 (Canadian Deuterium Uranium-Boiling Light Water-250 megawatts).

The first nuclear power demonstration (NPD) reactor, CANDU-PHW-20 (Pressurized Heavy Water-20 megawatts), at Rolphton, Ont., has shown clearly that capacity factors in excess of 80 p.c. throughout a full year can be achieved with this type of system. Fuel is routinely changed with the reactor at power and losses of heavy water are well within the economic limits. This reactor is now yielding useful information on the long-term behaviour of its components and is providing a training base for those who will staff the larger reactors now being built in Canada and abroad. The next reactor in the series is the 200-megawatt station at Douglas Point, Ont., which was brought into initial operation in 1966.

Canadian heavy-water power reactors are also under construction in India and Pakistan. To meet the large demand for heavy water that these reactors necessarily entail, one plant to produce 200 tons a year is nearing completion at Glace Bay, N.S. (later to be extended to 400 tons a year), and one plant that will produce 500 tons a year is under construction.

Nuclear power is expected to restore the world market for uranium, with the major build-up occurring in the 1970s. The high energy yield from the fission of uranium is the key to economic nuclear power. The yield is so high that the cost of the raw uranium is a very minor component of the cost of electric power. It is about 5 p.c. of the total and may be contrasted with 50 p.c. or more paid for coal in some large conventional generating stations. The largest component in the over-all economy of nuclear power systems is reactor plant construction and a minor (7 p.c. to 12 p.c.) component is fuel fabrication.

In the past, the major atomic energy activity in Canada was uranium mining and refining for export in support of military uses. Circumstances have changed so greatly that the Government is following a policy of no further exports for nuclear weapons but is encouraging export for peaceful purposes such as nuclear power subject to negotiated safeguards. It is also significant that since lower unit power costs result from larger stations, there is a new incentive for large utilities to export power from their systems and to interconnect centres of load by high voltage transmission even over long distances.

* Prepared (July 1967) by Dr. W. B. Lewis, Senior Vice-President (Science) Atomic Energy of Canada Limited, Chalk River, Ont.

Also, all users of electricity benefit from the new trend to lower rates through greater demand. The Canadian designs of nuclear power reactor appear capable of adapting to the largest capacities desired and of taking advantage of changes in the market value of natural uranium and of reprocessed fuel to reach even lower power costs as the scale of operations increases.

The first commercial food irradiator using Cobalt-60 radiation is operating near Montreal, Que.

A major advance in instrumentation, precision gamma-ray spectrometry, based on specially prepared germanium crystals pioneered at Chalk River, is revolutionizing many techniques, particularly isotope and element analyses by radioactivation by neutrons.

Organizational Arrangements.—Three Federal Government organizations have the basic responsibilities for atomic energy in Canada: (1) the Atomic Energy Control Board (AECB), responsible for all regulatory matters concerning work in the nuclear field; (2) Eldorado Mining and Refining Limited (EMRL), with a double function as a producer of uranium and as the Government's agent for the purchase of uranium from private mining companies; and (3) Atomic Energy of Canada Limited (AECL), concerned with nuclear research and development, the design and construction of reactors for nuclear power, and the production of radioactive isotopes and associated equipment, such as Cobalt-60 beam therapy units for the treatment of cancer, and large installations for the sterilization of medical supplies and other uses.

In addition to the above agencies, the Radiation Protection Division of the Department of National Health and Welfare (see pp. 301-302) plays an increasing role in ensuring the safe use of radioisotopes and X-rays as well as monitoring radioactivity in public water supplies and the environment from all sources.

AECB does not itself conduct research but it gives substantial grants to universities to further independent studies and to provide the equipment without which the universities would find it difficult to train the nuclear research workers of tomorrow; in 1966-67 they totalled \$2,000,000. The National Research Council also has made grants in the atomic energy field.

EMRL operates research and development laboratories in Ottawa and uses them to support its uranium mining and processing at Beaverlodge in northern Saskatchewan and its refining plant at Port Hope, Ont. EMRL co-operates with the Department of Energy, Mines and Resources, which carries out background research on the production and use of uranium.

AECL has an 11-man Board of Directors, including individuals from power companies, private industry and the universities. The company's major plant, the Chalk River Nuclear Laboratories, is near Chalk River in Ontario, and a second plant, the Whiteshell Nuclear Research Establishment, is near Pinawa in Manitoba. The company's Head Office and AECL Commercial Products are in Ottawa. AECL Power Projects, located at Sheridan Park near Toronto, direct the engineering of power reactors and nuclear generating stations and operate as consulting nuclear engineers. The design and construction of NPD, the demonstration plant, was carried out by collaboration between AECL, the Canadian General Electric Company Limited and Ontario Hydro. AECL Power Projects, with the assistance of Ontario Hydro, designed and constructed the Douglas Point station, which plant, by agreement, will be purchased by Ontario Hydro when it is in satisfactory operation. A similar arrangement between AECL and Hydro-Quebec is being used for the construction of the CANDU-BLW-250 station. The large units of the Pickering station are being built by Ontario Hydro using AECL Power Projects as consulting nuclear engineers.

Because of the great pace of technological development in nuclear power throughout the world, AECL devotes a major effort to collaboration with many organizations. These include industrial firms and the scientific and engineering departments of universities in Canada and, through foreign government agencies and several international organizations,

many technical groups in other countries. For example, the Canadian General Electric Company has designed and constructed WR-1, an organic-cooled experimental reactor, for the Whiteshell Nuclear Research Establishment on a fixed price negotiated contract. The Canadian General Electric and Canadian Westinghouse companies are AECL's chief contractors for fuel element fabrication, and other work related to Canada's nuclear power program is carried out in collaboration with Shawinigan Engineering; Surveyer, Nenniger and Chenevert; Orenda Limited; Dilworth, Secord, Meagher and Associates; Montreal Engineering Company Limited and others. In general, AECL's policy is to stimulate the interest of private industry in the development of nuclear power so that these firms can take over construction of power plants when the opportunity arises, leaving AECL free for fundamental studies and developing new reactor concepts. For some years AECL expects to continue a consulting engineering role in the design of nuclear generating stations. AECL also lends general support to the nuclear and related studies of Canadian universities and lets contracts to the universities on specific problems.

To support their activities in this field, both industry and universities need ready access to information. This was one reason why industry set up the Canadian Nuclear Association, a body that has held a highly successful series of annual conferences at which both progress and the prospects for the future are reviewed. A commercially published magazine, *Canadian Nuclear Technology*, maintains the flow of general information and opinion. Detailed technical information is available principally from the library of the Chalk River Nuclear Laboratories, which lends about 650 items a month from its comprehensive collection of the world's nuclear literature. Information is also distributed from extensive depository collections at the libraries of the University of British Columbia, McMaster University and the National Research Council and from seven smaller collections located across Canada.

In the international field, close ties are kept with the United States Atomic Energy Commission (USAEC) and the United Kingdom Atomic Energy Authority, both of which have representatives permanently at Chalk River. There is an agreement with the United States for co-operative work on heavy-water-moderated reactors; it provides for the free exchange of all technical data in this field and a commitment by the United States to undertake research and development related to reactors of Canadian design. Collaboration has also been established with the International Atomic Energy Agency, the Organization for Economic Co-operation and Development, and Euratom, as well as with Australia, West Germany, India, Italy, Japan, Pakistan, Spain, Sweden, Switzerland, U.S.S.R. and, less formally, with Denmark, France and Norway. In India a major experimental reactor—the Canada-India Reactor—similar to NRX at Chalk River was constructed and was formally inaugurated in January 1961.

Two 200-megawatt units similar to that at Douglas Point are being constructed in India on a co-operative basis, known as the Rajasthan Atomic Power Project (RAPP). India has announced plans to install two more units on another site near Madras. A 137-megawatt station for the Karachi area is under construction by the Canadian General Electric Company on contract from the Government of Pakistan.

Research and Research Facilities.—At the Chalk River Nuclear Laboratories, basic and applied research is carried on by about 300 professional scientists and engineers supported by 350 technicians devoted to research in nuclear physics, nuclear chemistry, radiobiology, reactor physics, reactor fuels, radiation chemistry, materials science, environmental radioactivity, physics of solids and liquids, and other subjects, using as their primary facilities the two major reactors, NRX and NRU, the auxiliary reactors, ZEEP, PTR and ZED-2, a new tandem Van der Graaff accelerator and analytical facilities such as a precision beta-ray spectrometer, mass spectrometers, electron microscopes, multi-channel pulse analysers, automatic recorders, and analogue and digital electronic computers.

Basic research is carried on in many fields, especially that of the structure of atomic nuclei and of the interactions of neutrons, not only with individual nuclei but also with liquids and crystalline solids, particularly those involving energy transfer. For nuclear

structure studies, and earlier tandem Van der Graaff made pioneer work possible by providing multiply charged ions of precisely known energy and direction. It has proved possible to produce nuclei in specific energy states by different routes and to identify and analyse the states, thereby deducing the spin and other characteristics and discovering, for example, three correlated series of rotational states in the nucleus neon-20. Not only is this important to a basic understanding of nuclear structure but it also finds application in unravelling the complex of nuclear reactions responsible for the genesis of nuclei in the interior of stars. With the new tandem Van der Graaff rated at 10,000,000 volts on the terminal replacing the former machine that attained 7,000,000 volts, it should be possible to study reactions between heavier and more complex nuclei.

Studies of neutron interactions with matter are made possible by the intense beams of neutrons available from the NRU reactor. By monitoring the neutrons in cosmic radiation, it has been possible to find correlations with the occurrence of solar flares and contribute to the recent advances of knowledge of phenomena in interplanetary space. Isotope techniques have brought about revisions in the basic theory of chemical reactions induced by radiation. This basic research may find a useful application in the technology of various coolants in nuclear power reactors.

The research facilities of the NRX and NRU reactors have continued to attract individual scientists as well as teams from universities and from other countries. More facilities for studying radiation damage and its effects under closely controlled conditions are coming into use. These include devices for measuring creep of metals under stress and fast neutron bombardment at controlled temperatures.

The growing use of lithium-drifted germanium detectors for precise measurements of gamma-ray energies has led also to more extensive electronic digital data-processing.

The first major installation at the Whiteshell Nuclear Research Establishment (WNRE) is the organic liquid-cooled heavy-water-moderated experimental reactor WR-1. The facilities of WR-1 are quite extensive and can be applied to development work also with other coolants such as boiling water and super-heated steam. Laboratory facilities at WNRE are specially suited to studies of the effects of radiation on materials and a wide program from molecular biology to radiation chemistry and reactor engineering is developing.

Atomic energy or nuclear science is spreading out into so many fields of technology and daily life that the boundaries are becoming diffuse. For the purposes of this review, the field is restricted to all those activities that are conducted only under an order from the Atomic Energy Control Board. This field includes all uses of radioisotopes including natural uranium and thorium at significant levels of activity and the operation of all machines capable of producing such isotopes and highly penetrating radiations. Radioisotopes are widely used in medical research and diagnostics including forensic studies and in biological research in universities, hospitals, research institutes and field stations. They are also used in well logging and in analyses of geological and mineral samples. The radiations from isotopes, especially Cobalt-60, are used for sterilization of packaged and sealed medical supplies, for cancer therapy and for food sterilization. Since the Cobalt-60 radiations are not capable of producing neutrons or secondary radioactivity, the products from these operations require no subsequent radiation control and therefore lie outside the atomic energy field. The irradiators themselves are controlled by the AECB. Multimillion volt particle accelerators are capable of and sometimes used for producing radioisotopes at high activity levels, so both the machines and the products come under AECB regulation. Several new accelerators have been introduced recently in university research laboratories. There are new electron linear accelerators at the universities of Saskatchewan and Toronto. The University of Montreal has taken over the Tandem accelerator from Chalk River and a similar machine has been installed at McMaster

University. Of the older accelerators the cyclotron at McGill University in recent years has been used extensively for nuclear physics and nuclear chemistry and among the results obtained was the discovery of several nuclei that emit protons in their radioactive decay. The nuclear reactor at McMaster is used extensively in a wide range of research.

Nuclear Power Development.—Much of the success of the CANDU series of reactors is attributable to the engineered design of the fuel tested in many experimental irradiations under conditions that are more exacting than normal service. The fuel is uranium dioxide, specially prepared from natural uranium entirely in Canada. Strings of pellets of sintered oxide are charged into thin-walled zirconium alloy tubes. The tubes deform slightly in service in a determined manner that has proved satisfactory. The migration of the fission product atoms, especially the gases, has been studied extensively and satisfactory operating conditions have been established for the full energy yield of 9,000 megawatt-days per ton of uranium and more. This energy yield is so great that there is no need to make provision for processing the spent fuel and the prospective fuelling cost is less than 0.8 mill (0.08 cent) per kilowatt hour of electricity. This cost may be compared with about three mills from coal at \$8 per ton. The low fuelling cost is most important because Canada has access to such an abundance of coal, oil and natural gas that the competitive cost level for thermal power is lower than in many other countries.

An evaluation was presented at the third United Nations Conference on the Peaceful Uses of Atomic Energy held at Geneva in September 1964 of cost estimates of several preliminary designs of large power reactors using heavy water as moderator. These designs represented types for which development work was well advanced. The differences lie in the choice of heat transfer fluid or 'coolant' and the steam cycle. Basically, there are three coolants—heavy water, ordinary or light water, and an organic liquid. The heavy water could be under pressure to prevent boiling or to allow some boiling. Light water would have to boil or be in the form of 'fog' or 'wet steam'. The organic liquid must not boil. All types have excellent economic promise and it was decided to develop the boiling light water type chiefly for two reasons. By taking the steam direct to the turbine a boiler or heat-exchanger is eliminated and the efficiency is raised. The second advantage is a relaxation of the strictness of control of leaks needed with hot heavy water, both because of its cost and because of the toxicity of the tritium it contains.

The low fuelling cost derives as much from the details of the designs proposed as from the choice of heavy water as the moderator. Extensive development has been applied to reduce the fabrication cost of the fuel; a recent \$9,000,000 order at a price including the uranium and zirconium of \$44 per kilogram of uranium fulfills the predicted estimates while leaving still further promise of lowering the cost as the scale of production increases. Particular attention is paid in reactor design to minimize the wastage of neutrons by reducing the amount of absorbing structural material. For example, in the NPD reactor the tubes forming the fuel channels have 3.25 inches inside diameter and walls 0.163 inches thick whereas the four-inch diameter tubes in the Gentilly reactor will be of an improved zirconium alloy and only 0.095 inches thick. The capital cost per kilowatt is also being reduced by building reactors and turbines of larger capacity, by simplification and repetition of designs as well as by increased fuel ratings. The cost of heavy water is also falling as modern plants of large capacity come into production.

Most of the development work centres on establishing the properties of materials for the arduous environment of high temperatures, and radiation effects affecting the solids and the fluids. In ordinary engineering, the three parameters of stress, temperature and time lead to complex analyses, especially when corrosion and atomic diffusion are active. In reactors, irradiation is a fourth and major parameter. Thus, materials development still calls for a major scientific and engineering program of studies.

CANADIAN NUCLEAR REACTORS IN OPERATION, UNDER CONSTRUCTION OR UNDER DETAILED DESIGN

Name	Location	Date of Start-up	Power	Fuel	Moderator	Coolant	Use
Zero Energy Experimental Pile (ZEEP).....	Chalk River, Ont.	1945	100 w.	Natural uranium metal or oxide	Heavy water	—	Lattice experiments
National Research Experimental (NRX) ¹	Chalk River, Ont.	1947	42,000 kw.	Natural uranium oxide and enriched uranium alloy	Heavy water	Ordinary water	Research, engineering tests and isotope production
National Research Universal (NRU).....	Chalk River, Ont.	1957	90,000 kw. to 120,000 kw.	Enriched uranium alloy	Heavy water	Heavy water	Research, engineering tests and isotope production
Pool Test Reactor (PTR).....	Chalk River, Ont.	1957	100 w.	Enriched uranium alloy	Ordinary water	Ordinary water	Reactivity and absorption measurements
Toronto University Sub-critical Reactor.....	Toronto, Ont.	1958	—	Natural uranium metal	Heavy water	—	Research and teaching
McMaster Nuclear Reactor (MNR).....	Hamilton, Ont.	1959	2,000 kw.	Enriched uranium metal	Ordinary water	Ordinary water	Research
ZED-2.....	Chalk River, Ont.	1960	100 w.	Natural uranium metal oxide or carbide	Heavy water	—	Lattice experiments
Nuclear Power Demonstration (NPD).....	Rolphton, Ont.	1962	20,000 kw. (electricity)	Natural uranium oxide	Heavy water	Heavy water	Power demonstration
Whiteshell Reactor No. 1 (WR-1).....	Pinawa, Man.	1965	40,000 kw. at first	Enriched uranium oxide	Heavy water	Organic liquid	Research and engineering tests
CANDU-PHW-200 ²	Douglas Point, Ont.	1966	200,000 kw. (electricity)	Natural uranium oxide	Heavy water	Heavy water	Power
Karachi Nuclear Power Plant (KANUPP)...	Karachi, Pakistan	1970	137,000 kw. (electricity)	Natural uranium oxide	Heavy water	Heavy water	Power
CANDU-PHW-500 (several reactors) ²	Pickering, Ont.	1970	500,000 kw. (electricity) each	Natural uranium oxide	Heavy water	Heavy water	Power
CANDU-BLW-250.....	Gentilly, Que.	1971 proposed	250,000 kw. (electricity)	Natural uranium oxide	Heavy water	Ordinary water boiling	Power

¹ NRX is essentially duplicated in the Canada-India Reactor, near Bombay, India, which started up in 1960.

² The CANDU-PHW-200 design is also employed in the Rajasthan Atomic Power Plant in India, where the first reactor is scheduled to start up in 1969.

³ CANDU-PHW stands for "Canadian Deuterium Uranium-Pressurized Heavy Water".

Section 3.—Space Research in Canada*

The interests of Canadian scientists engaged in space research continue to be mainly in the field of aeronomy with particular, though not exclusive, emphasis on the high-latitude atmospheric and magnetospheric phenomena which are now generally believed to be related to the various disturbances on the sun. Canada, with its large land mass extending on both sides of the auroral zone, is ideally located for studies of medium- and high-latitude atmospheric phenomena and Canadian scientists have long been active in this exciting field. Although many of the programs of ground-based observations are still of great importance and are continuing, measurements from rockets and satellites are now making a significant contribution to knowledge of the upper atmosphere and solar-terrestrial relations.

The satellite program of the Defence Research Board, carried on in collaboration with the United States National Aeronautics and Space Administration (NASA), continues to form a major part of the Canadian space activities. The Canadian satellite *Alouette I*, which was launched on Sept. 29, 1962, is still in orbit. Its instruments are functioning satisfactorily and there is every indication that it will continue to operate and send back scientific data for some time to come. This satellite carries a number of experiments but its main objective is the sounding of the ionosphere from above. The ionosphere is the diffuse layer of highly conducting gas lying between heights of about 60 to 300 miles. It reflects radio waves over a wide band of frequencies and is of great practical importance for communications. The underside of the ionosphere has been studied for many years by the technique of sending a short pulse of radio waves up from the ground and examining this pulse after it had been reflected back from the ionized regions. *Alouette*, however, was the first spacecraft to provide scientists with a continuous sounding of the ionosphere from above.

Other instruments carried by the satellite enable studies to be made of radio waves from outer space and very low frequency electromagnetic waves whose propagation is influenced by the earth's magnetic field. There are also a number of detectors to study cosmic rays, energetic particles in the Van Allen radiation belts and the artificial radiation introduced by high-altitude nuclear explosions. Data are transmitted from the satellite to the ground stations in several countries around the world and the magnetic tape records are sent to Ottawa for analysis. Scientific results to date have been most gratifying and the satellite measurements have added greatly to knowledge of the earth's upper atmosphere.

The over-all design and construction of the spacecraft were carried out by the Defence Research Telecommunications Establishment. Some components were made by Canadian industry and the cosmic ray instruments were the responsibility of the National Research Council. The cost of the launching vehicle, the actual launching and much of the data recovery were undertaken by NASA as part of its international co-operative program. This joint Canadian-United States program is continuing. On Nov. 29, 1965, the second Canadian satellite *Alouette II* was successfully launched by NASA from the Western Test Range in California, carrying instruments similar to but more sophisticated than those of *Alouette I*. Its elliptical near-polar orbit has an apogee of 3,000 km., allowing measurements to be made over a much greater height range than previously. *Alouette II* is the first of four satellites to be built in Canada for the International Satellites for Ionospheric Studies (ISIS) series. These vehicles will be launched at about two-year intervals during the next five or six years.

The National Research Council has been responsible for the management of the Churchill Research Range in northern Manitoba since Jan. 1, 1966, under an arrangement formalized by a Canadian-United States governmental agreement providing for joint funding and use of the range and designating NRC and NASA as the responsible Canadian

* Prepared (July 1967) by P. de L. Markham, Space Research Facilities Branch, National Research Council of Canada, Ottawa.

and American agencies. Operations at the range are carried out by a civilian contractor. At present about 70 large sounding rockets are launched each year together with about 200 small meteorological rockets.

Rockets have a special role in the space programs because there is an important region of the upper atmosphere that is too low for satellite orbits and too high to be reached by balloons or aircraft. This is the region between heights of about 25 and 200 miles. Here are found the absorbing layers in the lower ionosphere which cause radio blackouts and here are detected the complex atmospheric processes which produce the visible aurora. Because the axis of the earth's magnetic field is tilted, the auroral zone sweeps down across Canada and Churchill lies almost in the middle of this zone. This region of the atmosphere is therefore of great interest and importance to Canadian scientists. For many years investigations were limited to ground-based radio and optical measurements but now rockets are being used to carry instruments right into the aurora. The measurement *in situ* of electron density, temperature and charged particles will ultimately lead to a proper understanding of the aurora and high-latitude disturbances.

Another zone of particular scientific interest is that in the vicinity of the magnetic dip pole. Because its geographic location at the present time is well outside the cover of the Van Allen radiation belts, which terminate in the auroral zones, the magnetic polar region is particularly suitable for the study of radiation from outer space. In 1966, two *Black Brant III* rockets carrying instrumentation for the measurement of galactic X-rays were launched from a quickly prepared site at Resolute Bay, N.W.T. The operation was very successful and the results were of considerable scientific interest. In 1967 the installation was improved and expanded to cater for meteorological rockets. Launches are planned for late 1967 for the NRC, the University of Calgary, NASA and the Meteorological Branch of the Department of Transport.

Many of the rockets fired at Churchill are of Canadian design and development; the *Black Brant* rockets were pioneered by the Defence Research Board and are now produced commercially in Winnipeg. *Black Brant IIA* is a 17-inch diameter vehicle capable of carrying 150 lb. of payload to over 100 miles. *Black Brant III*, 10 inches in diameter, will lift 40 lb. to about 100 miles. *Black Brant IV* is a two-stage rocket, combining the *IIA* and *III*, and will go to a height of about 600 miles. *Black Brant VA* and *VB* are both 17-inch vehicles, the former with the same motor as the *IIA* but with a rather higher performance, and the latter with a motor giving slightly less thrust for double the time which results in an ability to carry 250 lb. of payload to over 240 miles.

Along with the increased activity in Canadian space programs there has been a general broadening of interests. The Meteorological Branch of the Department of Transport (DOT) Meteorological Satellite Data Laboratory is applying satellite observations to the problems of meteorology and ice reconnaissance. Two experimental ground stations for the development and use of meteorological satellite systems have been completed at Halifax and Toronto. In the field of communications satellites, DOT has a joint program with NASA in which Canada participates in the testing of satellites in the Applications Technology Satellite (ATS) Program using the experimental communications satellite ground station at Mill Village, N.S.

Canadian universities have continued to be very active in the field of space research. Nine university groups have programs involving the instrumenting of rockets, balloons or satellites for upper atmospheric studies. The McGill University program of gun-launched vehicles, known as HARP (High Altitude Research Program), has been continued with success, although Canadian financial support for the project has terminated.

Much of the foregoing work is shared with Canadian industry. Civilian contractors are producing instruments and space vehicles for both Canadian and foreign experimenters. In some programs, such as the *Alouette* satellite and the development of *Black Brant* rockets, industry is playing a major role. Other work of great importance for the space programs, such as fundamental research on materials and in plasma physics, is also being carried on in industrial laboratories.

In 1966 a special study was commissioned by the Science Secretariat of the Federal Government to review the existing Canadian programs in space science, to determine the reasons for a space program in Canada, to forecast future programs and to outline the elements of a suitable organization. This study, known as the Chapman Report, was published in March 1967 and led to the formation in July 1967 of a Task Force on Satellites which will make recommendations to the Government on the scope and nature of Canada's future activities in the use of satellites, including satellite communications, and will fully explore avenues for co-operation with United States, European and other interests in this field.

Section 4.—Research in Geophysics and Astronomy

Research in the field of geophysics is covered in the 1967 Year Book under the heading of Geology and Economic Minerals of Canada, pp. 30-32. The following item on this subject gives brief additional data on current (1967) projects and facilities. A special article on Astronomy in Canada, appearing in the 1965 Year Book at pp. 47-55, indicates in some detail the advances made in astronomical research and educational facilities; the write-up on pp. 420-421 mentions the highlights only.

Geophysics.*—Geophysics—the study of the earth, including the oceans and atmosphere, by the methods of physics—embraces a number of fields, each a major science in itself, such as geodesy, seismology, terrestrial magnetism, meteorology, oceanography and hydrology. Work in geophysics in Canada is carried on by a number of Federal Government departments, some provincial governments, nearly all universities and by companies engaged in geophysical prospecting for oil or minerals.

Currently, in the field of seismology, the 25 seismograph stations operated by the Dominion Observatory, with the co-operation of universities in several cases, provide good coverage of the country for the recording of earthquakes. The regular stations are supplemented by a special array of detectors at Yellowknife, N.W.T., which is operated by the Dominion Observatory as part of a world net of highly sensitive detection stations for nuclear explosions. Because of interest in seismicity as applied to building problems, special strong-motion instruments have been installed on the West Coast and, in co-operation with the Division of Building Research of the National Research Council, at Sept Îles, Que. Considerable work has also been done by both government and university groups on the study of the earth's crust, using waves from explosions.

Measurements of both the gravitational and magnetic fields of the earth were extended during 1966-67 over land areas by the Dominion Observatory and the Geological Survey, and over the oceans by the Bedford Institute of Oceanography. These measurements provide information that is extremely useful in the study of concealed geological structures. A very large area of Canada has now been covered by airborne magnetometer maps (partly through co-operative federal-provincial surveys); in many regions, these maps have come to be an essential item of equipment for the prospector. Because the north magnetic pole is located in Canada, studies of magnetic disturbances and their relation to conditions in the upper atmosphere are of importance in Canadian geophysical research. Observations by means of rockets were made at the Churchill Research Range in northern Manitoba and also, for the first time, with rockets fired from Resolute Bay, N.W.T. Satellite *Alouette I* launched in 1962 and *Alouette II* launched in 1965 continue to provide information on the ionosphere. (See also p. 418.)

The Canadian program for the International Hydrological Decade, a ten-year study of the world's freshwater resources, has been developed in detail. Experimental basins across the country have been selected for the observation of the effects of changes in surface features on the amount and quality of groundwater. A feature of the Canadian program in hydrology is the importance of glacier studies. During the year, expeditions

* Prepared by Dr. G. D. Garland, Geophysics Laboratory, University of Toronto, Toronto.

to over 12 glaciers in the Arctic or Cordillera were carried out by Canadian or other groups. Great interest was provided by the Steele glacier of the Yukon, which in July 1966 underwent a sudden and unprecedented advance.

Meteorology includes not only the routine forecasting carried out principally by the Meteorological Branch of the Department of Transport (see pp. 63-64), but also research in special problems by the Branch and by at least 12 university groups. These problems include controlled experiments in weather modification, the mechanics of hail formation, and micrometeorology, which is the detailed investigation of meteorological conditions in regions of small extent.

Partly as a result of work by Canadian geophysicists on the nature of the ocean floor, which indicated that the major oceans of the world are spreading, the old theory of continental drift was revitalized and actively discussed by geophysicists throughout the world. It is recognized that there could be very significant consequences to the methods of locating economic minerals if the continents are drifting.

Astronomy.*—Modern astronomical research is based on observations secured with complex optical and radio telescopes. The major centres of this research in Canada have developed within the Federal Government and at a few universities. Research in optical astronomy began early in this century at the Dominion Observatory, Ottawa, and this was followed by the construction of larger telescopes at the Dominion Astrophysical Observatory, Victoria, and the David Dunlap Observatory of the University of Toronto. Other Canadian universities teaching astronomy include the University of Western Ontario, Queen's University, the University of Waterloo, the University of Saskatchewan, the University of British Columbia and Victoria University. Some of these universities have their own small observatories. A new observatory, commemorating the visit of Her Majesty Queen Elizabeth II to Canada in October 1964, is under construction on Mount Kobau in southern British Columbia. It will be equipped with a large reflecting telescope 150 inches in diameter, in addition to smaller telescopes, and will be a national observatory available to astronomers throughout the country. Completion of the large telescope is scheduled for about 1973.

Canada first entered the field of radio astronomy, the study of radio emissions from beyond the earth, in 1946 when the National Research Council began its study of solar radio waves. Radio astronomy has expanded rapidly and there are now radio telescopes operated by the University of Toronto, by Queen's University, by the Dominion Observatory near Penticton, B.C., and by the National Research Council at a large observatory in Algonquin Park, Ont., where a steerable radio telescope 150 feet in diameter began observations in 1966. An 84-foot parabolic telescope and two large arrays of antennas are in operation at the Penticton site.

Canadian astronomers are engaged in various specialized fields of research. In the study of the solar system the sun has been studied for many years by both optical and radio techniques with emphasis on solar flares and other phenomena which affect the environment of the earth. Solar eclipses in which the path of totality crosses Canada have been observed whenever possible. Only minor attention has been devoted to study of the planets but major efforts have gone into meteor research. Both photographic and radar equipment are employed in this work and the study of meteor spectra and radar echoes from meteor trails have been particular specialties. There is an increasing interest in the related field of meteorites and Canada has figured prominently in the study and interpretation of old craters caused by the impact of huge meteorites.

Stellar astronomy has been the largest single field of Canadian astronomy. One aspect of this is the accurate determination of the positions and motions of stars in the sky. The Dominion Observatory is continuing an active program of positional astronomy aided by new and highly specialized instruments. The large telescopes at Victoria and Toronto have been used primarily for spectroscopy, one of the major tools of astrophysics.

* Prepared by Dr. Ian Halliday of the Dominion Observatory, Ottawa.

Several programs have been completed in which large groups of stars have been studied individually to determine their true luminosities and motions in the line of sight. The results have then been used for research on the structure of the earth's Milky Way galaxy. From spectroscopic studies of certain types of close double stars, information on such properties as the size, mass, density and temperature of individual stars is secured. Stars whose light varies in intensity have been studied by photography for many clusters of stars and are also studied by photoelectric devices mounted on the telescopes at Victoria, Toronto and the University of Western Ontario.

Although the optical telescopes in Canada have not been used for extragalactic research, many of the stronger sources in the field of radio astronomy are now known to be exceedingly distant objects far beyond the stars of the earth's galaxy. Canadian radio telescopes are and will continue to be engaged in the observation of such sources. At the same time they are also involved in the study of clouds of gas between the stars of the Milky Way system and this work complements the knowledge gained from spectroscopic research with optical telescopes. The large size of the Queen Elizabeth II telescope planned for Mount Kobau will guarantee Canadian astronomers an opportunity to become active in all fields of extragalactic astronomy and will provide essentially complete facilities for astronomical research in Canada.

Section 5.—Other Scientific and Industrial Research Facilities

This Section outlines research facilities and activities other than those covered in Sections 1 to 4—various federal departments and agencies, provincial organizations, universities and industry. The first three types of institutions—federal, provincial and university—have, of course, an interest in problems of industrial significance. As already stated, although many Canadian industries now possess research facilities—some of them quite extensive—much of the industrial research to date has been done under government auspices.

Subsection 1.—Federal Organizations

Research activities in the various Federal Government departments and agencies have expanded rapidly, at first because of the need for speeding up the production of raw materials, which were long the basis of Canada's export trade, and later because of increasing interest in the processing of raw materials, the necessity of meeting the needs of national defence and the developing consideration for many human and resource requirements. In addition to the activities of the National Research Council, Atomic Energy of Canada Limited and the Department of Energy, Mines and Resources dealt with in Sections 1 to 4, there are a number of other federal agencies involved in research, as shown in Table 8, p. 432.

The scientific work of the Department of Agriculture is described in Chapter XI of this volume, the investigations conducted by the Board of Grain Commissioners in Chapter XXI, the specialized work in scientific forest research in Chapter XII, scientific services concerned with Canada's mineral resources conducted by the Department of Energy, Mines and Resources in Chapters I and XIII, investigational work of the Department of Fisheries and the Fisheries Research Board in Chapter XV, research of the Canadian Wildlife Service of the Department of Indian Affairs and Northern Development in Chapter I, medical and other research conducted by the Department of National Health and Welfare and other agencies in Chapter VI, and the work of the Defence Research Board in Chapter XXVI.

The Department of Indian Affairs and Northern Development operates a permanent scientific research laboratory north of the Arctic Circle. This laboratory, at Inuvik, N.W.T., has year-round facilities specially designed for arctic research and serves as a base for extensive field studies in the Western Arctic. It accommodates a permanent staff

of eight scientists from many disciplines and up to 16 visiting researchers. The operation of the laboratory is in charge of a manager working under the direction of the Northern Co-ordination and Research Centre of the Department.

Subsection 2.—Provincial Organizations

Five of Canada's provincial governments (Nova Scotia, New Brunswick, Manitoba, Saskatchewan and Alberta) have established research councils or foundations and two others (Ontario and British Columbia) have assisted financially in the setting up of such organizations. Quebec has also announced its intention of establishing a provincial research council and industrial research centre in the near future. Most provincial governments have university laboratories to consult, particularly about local industrial and agricultural problems, and many individual departments have facilities for research in their particular fields of endeavour or assist research through the provision of financial aid to students working in those and other scientific fields. Agriculture is particularly well covered because of its importance as an export industry but the provinces are also intensely interested in their other natural resources. Their efforts in the fields of agriculture, forestry, mining and fisheries are outlined in the Chapters dealing with those subjects (see Index).

Research and development expenditures by the seven provincial councils or foundations and the sources of funds for such purposes are shown in Subsection 4, Tables 5 and 6, p. 430.

Nova Scotia Research Foundation.—This body was created by the Government of Nova Scotia in 1946 to give its people scientific and technical assistance in finding new and better ways to utilize the resources of the forest, the sea, the farm, the mine and the process industries. To this end it seeks to correlate and further scientific work on local problems and available resources. Within two years a new \$1,250,000 laboratory building, to be financed by an Atlantic Development Board grant, will occupy a commanding 10-acre site in Dartmouth, N.S., and will house a staff of about 100, including 70 scientists and technicians. An additional \$500,000 has been provided for construction of three smaller laboratories for ceramics, timber-testing and water-testing.

The Foundation assists universities, colleges, research groups, industries, provincial and federal departments and individuals by loans of equipment, grants, scholarships, laboratory and summer assistants, library, cartographic, photogrammetric and translation services, and technical information. It has supported or collaborated in work on breeding new varieties of plants and root nodule bacteria; on antibiotics, poultry, blueberry culture, coal-burning equipment, the constitution and gasification of coal, the non-destructive testing of mine equipment, the utilization of anhydrite, diatomite, fish waste, gypsum, seaweed, slag, slab wood and fertilizing materials. It has conducted geophysical, geological, air pollution and seaweed surveys as well as forest aphid, forest ecology and genetic studies and has assisted studies on the nutrient cycles of lakes, on X-ray crystallography, on pressures in underground strata and on crop damage by predators. Its Geophysical Division is equipped to undertake all types of magnetometric, gravimetric, resistivity, seismic and electromagnetic explorations, and so assess the possibilities of the existence of oil, gas, potash and other economic mineral deposits in Nova Scotia and in the surrounding sea. The Technical Services Division provides industries in the province with a free field service on technical information and industrial engineering. Technical assistance is also provided on corrosion problems, equipment and process trouble-shooting and on new product development. The Operational Research Division prepares studies on provincial resource utilization and undertakes industrial studies at the request of individual firms.

A *Research Foundation Bulletin* is issued from time to time to keep industry advised of Foundation activities and also of important discoveries in science and technology. The *Research Record* provides a descriptive account of past research projects.

The New Brunswick Research and Productivity Council.—The aims of this Council, established by an Act of Legislature in 1962, are *inter alia* to “promote, stimulate and expedite continuing improvements in productive efficiency and expansion in the various sectors of the New Brunswick economy”. The Council receives an operating grant from the provincial government and support in specific areas from federal sources. It undertakes contract research on a repayment basis from industry. Its laboratories are at present 17,000 sq. feet on a ten-acre site in Fredericton, and plans are being drawn up to extend this to a total of 50,000 sq. feet with the support of a capital grant of \$1,250,000 from the Atlantic Development Board. Staff continues to increase—doubling from 20 to 40 during 1965-66 and reaching an expected 50 by the end of 1967. The work of the Council is centred on providing industry with engineering, industrial engineering and technical information services, on training courses in management techniques and on applied research in the fields of mechanical and control engineering, food technology, microbiology and mineral technology. Policies are established by 13 Council members representative of provincial industry, labour, government and education with the help of specialist advisory committees. The Executive Director has supervision over and direction of the work of the staff and has charge of all matters relating to the administration of the affairs of the Council. The Chairman of the Council reports annually to the Premier of the province.

Manitoba Research Council.—The Manitoba Research Council consists of seven members representing natural-resource-based industry, manufacturing, the University of Manitoba and labour. Its work is financed by provincial government appropriations, although fees and service charges may be levied for its services. The objectives of the Council are to promote or carry on, or cause to be promoted or carried on, research and scientific inquiries respecting agriculture, other natural resources, industry or other segments of the economy of the province and to help secure for Manitoba the benefits of research and scientific inquiries carried on elsewhere. The preponderance of small industrial establishments in Manitoba and their need for assistance in developing a more scientifically based production capability to improve their competitive position in domestic and world markets was the major technical reason for the establishment of the Council. At present it maintains an office and staff in the Provincial Government Administration Building (Norquay Building) in Winnipeg.

Saskatchewan Research Council.—This Council was set up in 1947 under an Act of the Government of Saskatchewan. The Council carries out research in the physical sciences, both pure and applied, with the aim of improving the provincial economy. It is therefore particularly concerned with the commercial exploitation of provincial resources and the scientific aspects of business. At first the Council had no scientific personnel and laboratory facilities of its own. Its research program was carried on at the University of Saskatchewan and was promoted by means of grants to members of the staff and scholarships to graduate students. The 1947 Act was amended in 1954 to empower the Council to acquire property, employ staff and conduct its own financial affairs. Laboratory buildings were erected on the university campus in 1957 and were extended in 1963. In the present program of research the emphasis is on water and mineral resources, fields of agriculture not covered by other organizations, and technical assistance to industry. A large part of the program is carried out by the permanent staff, now numbering about 60, but some of the Council's research is still promoted by grants to university staff. The members of the controlling body, the Council proper, are appointed by the Lieutenant-Governor in Council and consist of representatives of the government, industry and the university.

Research Council of Alberta.—The Province of Alberta set up a scientific and industrial Research Council in co-operation with the University of Alberta in 1921, the promotion of mineral development within the province being the chief purpose leading to its establishment. The Council operates under an Act somewhat similar to that which set up the National Research Council and is principally financed by provincial government appropriations. The present program is directed to the application of basic and applied science toward the development of the natural resources of the province and toward the establishment of new industrial operations within the province. Investigations in the Council laboratories and pilot plant are organized into two branches—the Earth Sciences Branch which includes all work on groundwater geology, geological surveys and research, mineral beneficiation and soils, and the Fuels Branch which includes work on coal, petroleum, natural gas, chemical process and product development, and gasoline and oil testing. There are, in addition, groups dealing with industrial engineering services, highway research, a co-operative program on cloud physics with reference to the hail problem, and a number of special projects.

The operations of the organization are controlled by a Council of ten individuals representative of the government, the universities and industry. The various research projects are reviewed by advisory committees composed of specialists in each field, drawn from industry, the universities and the provincial government.

The main Council laboratories are located on the University of Alberta campus in Edmonton. A pilot plant facility is located in the Clover Bar area east of the city.

Ontario Research Foundation.*—The Ontario Research Foundation, established in 1928, operates as an independent corporation, deriving its powers from a special Act of the Legislature and governed by a Board of Governors appointed by the Lieutenant-Governor in Council of Ontario. The organization was financed initially by an endowment fund composed of subscriptions from commercial and industrial corporations, and from private individuals, and a grant from the provincial government. However, most of its current income is derived from contract research undertaken for industry, although income is also obtained from the various government departments for research and other work undertaken on a contract basis. The Foundation is concerned primarily with the development of industry and the development of Ontario's natural resources through the application of scientific research. However, Foundation activities are not confined to the province; research contracts are routinely handled for any organization, without reference to location. Being primarily an industrial research institution, the Foundation's main areas of scientific endeavour are chemistry, physics, metallurgy, applied microbiology, textiles and engineering. A field engineering and technical information service is provided free to industry, sponsored by the Ontario Department of Economics and Development and by the National Research Council. In 1967 the Ontario Research Foundation relocated in Sheridan Park, Ont., where it is the nucleus organization of the Sheridan Park Research Community.

British Columbia Research Council.*—This Council is a non-profit, industrial research institute with offices and laboratories on the campus of the University of British Columbia. Its function is to enable even the smallest firms to improve their competitive position in Canadian and world markets by the use of the most up-to-date scientific knowledge. The Council provides a free technical information service in collaboration with the National Research Council, carries out contract research for clients on a confidential basis and initiates "in house" research programs designed to promote and utilize the resources of the province. The Council is active in the areas of applied biology, chemistry, engineering, physics, operations research, industrial market studies and economic feasibility studies.

* See also p. 401.

Subsection 3.—University Research

Research conducted in the universities falls into three broad categories: research projects carried out by faculty members in addition to their teaching duties; investigations by students, under the guidance of professors, to meet the requirements for advanced degrees; and larger projects or programs undertaken co-operatively on a faculty or inter-faculty basis in large laboratories or specialized institutes connected with the university.

Faculty Resources.—Research is generally considered to be an important part of the function of the university teacher and many of the 19,000 full-time staff members of Canadian universities can be assumed to be engaged in such activity. With most staff members, only the time that can be spared from teaching duties can be devoted to research during the teaching session but, for those not teaching summer classes, the summer months offer an opportunity for relatively uninterrupted research activity. The projects undertaken are very diverse in character and defy brief classification here but information concerning them is available in the annual reports of the presidents of the individual universities. For the humanities only, a more convenient source of information about the scope and diversity of Canadian scholarship is the "Bibliography of Scholarly Publications" included in *The Humanities in Canada*, a report prepared by F. E. L. Priestley for the Humanities Research Council of Canada and published by the University of Toronto Press in 1964.

Student Resources.—Prior to World War II, higher education in Canada concentrated almost exclusively on the production of trained professionals to serve the community as doctors, lawyers, engineers, etc., and only three Canadian universities had established graduate schools. In 1965-66, however, 43 universities and colleges were offering work at the graduate level, 30 of them with doctorate programs. The writing of a research thesis is an important part of the requirements for the award of the higher degrees toward which the students enrolled in these schools work. Compilations of the numbers of such students by sex, course, university, degree sought and year of expected graduation may be found in the annual series *Statistical Summary of Students Registered in the Graduate Schools of Canadian Universities in Physical and Earth Sciences, in Architecture and Engineering, and in Life Sciences*, published by the National Research Council, and in *Graduate Students in the Humanities and Social Sciences Registered at Canadian Universities 1963-64*, published by the Association of Universities and Colleges of Canada.

In 1965-66, the total enrolment (full-time and part-time) in graduate schools of Canadian universities and colleges amounted to 24,920, of whom 4,667 were women. In the same year, 697 Ph.D.s and 5,233 Master degrees and *licences* were awarded.

Financial Resources.—Financial support for university research comes primarily from five sources: departments and agencies of the Federal Government, quite heavily committed to support research largely in the natural and life sciences; industry, which supports both basic and applied research; private foundations, which have for many years been generous supporters of research, sometimes in selected fields; provincial governments; and the United States Government. Among these, the Federal Government is the largest single contributor. In 1965-66, its share of the total provision of funds for university research amounted to about 60 p.c., provincial governments contributed about 15 p.c., 9 p.c. came from private foundations, a little over 4 p.c. from industry and the remainder from other sources.

Although federal funds are channelled through almost a score of different departments and agencies, by far the greater part of the total is disbursed by four of them: the Defence Research Board, the Department of National Health and Welfare, the Medical Research Council and the National Research Council. Most of the assistance is in the form of direct

grants in support of research projects undertaken by university staff members but a significant part of the total program is the assistance given to graduate students working for higher degrees. Funds are also made available to defray associated expenditures, such as those incurred in the publication of research journals and the holding of conferences.

The activities of the Defence Research Board in support of university research consist mainly in the provision of funds for projects in basic sciences that are relevant to the defence of the nation. Funds administered by the Department of National Health and Welfare and the Medical Research Council go chiefly to support research in the medical and para-medical sciences. The National Research Council confines its support to the physical and earth sciences, architecture and engineering, and the life sciences. The total amount of funds disbursed by these and the other Federal Government agencies in 1966-67 was over \$42,000,000, not including more than \$7,000,000 in scholarships and bursaries paid to students.

The major source of funds for the promotion of the arts, humanities and social sciences, including research in these fields, is the Canada Council (see p. 395). It is rather difficult to define and categorize the various aspects of the Council's support of university research. Broadly speaking, however, three main categories can be identified; assistance to individual postgraduate students and research fellows; grants-in-aid of particular research projects; and assistance with ancillary research activities such as the compilation of indexes and bibliographies, purchases for libraries, publication costs and travel expenses.

In addition, some Federal Government agencies such as the Defence Research Board and the Departments of Manpower and Immigration, Labour, and Indian Affairs and Northern Development operate programs of university grants and contracts for research in economics, anthropology, sociology and related disciplines, but the total amount made available under these programs is not large.

Subsection 4.—Industrial Research and Development

Canadian firms are becoming increasingly involved in research and development. The need to develop new or improved products to serve expanding domestic and foreign markets, to meet competition from other Canadian and foreign firms and to efficiently exploit the country's natural resources has required industry to form and expand competent research and development units. This development of research and development facilities has been encouraged by the growth in markets, production facilities, financial resources and supplies of technically skilled manpower.

The Federal Government recognizes the need for industrial research and development and has inaugurated several programs of direct assistance. The Department of Industry administers two: the Defence Development Sharing Programme and the Programme for the Advancement of Industrial Technology. The National Research Council and the Defence Research Board both make grants in support of industrial research projects. In addition, the Industrial Research and Development Incentives Act authorizes the Department of Industry to make substantial grants to firms expanding their research and development programs.

Industrial Research and Development Expenditures.—The latest biennial DBS survey of expenditures on industrial research and development in Canada was carried out in 1966 and provided estimates for 1963 to 1966. These are summarized in the following tables; details are contained in the DBS publication *Industrial Research and Development Expenditures in Canada, 1965*.

The type of industrial research and development covered by these surveys ranges from pure research designed to obtain new knowledge in the physical and life sciences to conceiving and developing new products and processes, or major changes in products and processes, and bringing them to the stage of production. Such activities as market research and process and quality control are excluded. Companies surveyed were asked to report the cost of research and development done within the company in Canada and payments for research done outside the company in and outside Canada.

Spending on industrial research and development has increased every year during the period 1963-66. The annual increases in current expenditures from 1963 to 1964 and from 1964 to 1965 were about 20 p.c., but this rate seems to have declined to about 5 p.c. in 1965 to 1966. However, the 1966 estimates are largely forecasts. A possible explanation of this apparent decline may be that several major projects with heavy costs for prototype materials or 'expendable' research equipment are reaching completion. Both the aircraft and primary metals industries forecast declines in expenditures in 1966.

Two other observations may be made from the data in Table 1. The first is that expenditures for research and development plant and equipment seem to continue at a rate of about 20 p.c. of current intramural costs. The second is that the size and relative importance of payments for research and development performed abroad seem to be declining. Indeed, in 1965 companies reported receiving almost as much for such purposes from other countries as they spent abroad.

1.—Total Industrial Research and Development Expenditures, 1963-66

Item	1963 ¹	1964 ¹	1965 ¹	1966 ¹

¹ Forecast by respondents.

² Adjusted by DBS to remove those payments made by one Canadian firm to another, since such payments are covered in the intramural costs.

³ DBS estimate.

Table 2 shows the current intramural research and development expenditures by performing industry. In 1965, three industries—electrical products, aircraft and chemical products—accounted for about 57 p.c. of the total expenditures. Since 1955, the year of the first survey, these industries have spent more for current intramural research and development than all others combined.

¹ Forecast by respondents.

Because of difficulties of interpretation and estimation, the figures shown in Table 3 cannot be more than approximations. However, they do indicate that the research and development performed within an industrial group may be for the benefit of some other related industry or for a new 'industry'. Furthermore, company groups may have been assigned to one industry, whereas the activities of the group, including research and development, may actually cover several industries. The relevant table in *Industrial Research and Development Expenditures in Canada, 1965*, which gives the distribution by industry, shows this more clearly. For example, about three quarters of the research and development for rubber products and almost one half of that for textiles are performed by the chemical industry; also, research and development for the aircraft industry is largely for other products—about \$27,000,000 is spent on aircraft, \$10,000,000 on guided missiles and space vehicles, and \$22,000,000 on other transportation equipment.

3.—Current Intramural Research and Development Expenditures, by Product Group, 1965

Product Group	Amount	P.C. of Total	Product Group	Amount	P.C. of Total

For all Canadian industry, the performing company is by far the most important source of funds. However, Table 4 gives sources of funds for total current and capital research and development expenditures. Since capital expenditures are not usually financed by governments or other companies supporting a firm's research and development program, the performing company would be a less dominant source of funds for current intramural expenditures—perhaps accounting for about 65 p.c. rather than 71 p.c. Other significant sources are the Federal Government, foreign governments and foreign related companies. Industries and firms do not rely on the same sources to the same extent. For example, about 67 p.c. of the research and development funds for the aircraft industry seems to come from outside the performing company. The direct support of the Federal Government goes mainly to two industries—aircraft (52 p.c.) and electrical products (31 p.c.). Funds from foreign sources account for about one fifth of all intramural expenditures for the drug, petroleum and aircraft industries.

² Includes the membership fees of research institutes and payments for research and development performed under contract for non-related companies.

³ Includes foreign governments.

Research and Development Expenditures by Provincial Research Councils and Foundations.—Seven provinces have established research councils and foundations (see pp. 422-424), each having the primary role of assisting firms with technical problems and of aiding with the development of provincial natural resources. Table 5 shows the approximate expenditures of these councils or foundations. There seem to be two main differences between the pattern shown here and that apparent in Table 1—the first is that wages and salaries seem to account for a larger portion of current intramural costs and the second is the relative unimportance of extramural payments.

5.—Total Expenditures on Research and Development by Provincial Research Councils and Foundations, 1963-66

Item	1963	1964	1965	1966 ¹
	\$'000,000	\$'000,000	\$'000,000	\$'000,000

Section 6.—Federal Government Expenditures on Scientific Activities

Information on the expenditures of the Federal Government for scientific activities is provided by annual surveys carried out by the DBS. Each survey covers the actual costs of the preceding fiscal year and the estimated expenditures of the current year on the scientific programs of the reporting departments and agencies. At present, only activities in the physical and life sciences are included, although eventually the surveys will be expanded to include the social sciences. For survey purposes, "scientific activities" consist of research and development, scientific data collection, scientific information, testing and standardization and scientific scholarships. Data are also collected on capital expenditures on plant for scientific activities and on personnel employed in research and development.

The total amount spent by the Federal Government in support of scientific activities has increased substantially during the period shown in Table 7; annual increases in operating costs and grants or contracts were approximately 8 p.c., 23 p.c. and 14 p.c. The conduct of research and development, which includes intramural activities and contracts to other organizations, is the largest individual activity; its costs account for approximately 65 p.c. of all current costs. All research and development financed by the Federal Government represents about 80 p.c. of current expenditures on scientific activities.

7.—Summary Statistics of Federal Government Expenditures on Scientific Activities, Years Ended Mar. 31, 1964-67

Activity and Department or Agency	1963-64 ¹	1964-65 ¹	1965-66 ¹	1966-67 ¹

The Federal Government is the sole source of funds considered here but it is not the sole performer. Although most of the Government-funded research and development continues to be performed within its own establishments, the Government's support of outside research has increased noticeably during the past four years. Canadian industry and universities have both received a greater share, the relative expenditures on the Government's intramural program having decreased from about 70 p.c. in 1963-64 to about 60 p.c. in 1966-67.

¹ Forecast.

It is estimated that a full-time equivalent of about 18,600 persons was engaged in Government intramural research and development in 1966. Of these persons, about 5,000 were scientists or engineers. The Department of Agriculture, Atomic Energy of Canada Limited, the Defence Research Board and the National Research Council had the largest programs.

The latest facility in Canada's research program is the Whiteshell Nuclear Research Establishment at Pinawa, Manitoba, where hundreds of scientists and technicians are probing the economic production of nuclear power and conducting a mass of related studies in the fields of chemistry, chemical engineering, fuel development, medicine and metallurgy.

A series of heavily shielded rooms, or 'caves', are equipped with manipulators to permit the delicate handling of highly radioactive materials.

Section 1.—Canadian Criminal Law and Procedure†

The system under which justice is administered in a State is never rigid. To have it so would be neither expedient nor indeed possible. A judicial system must grow and adapt itself to the requirements of the people, and the exact limits of the powers of different legislative bodies require continued definition.

The criminal law of Canada has as its foundation the criminal common law of England built up through the ages and consisting first of customs and usages and later expanded by principles enunciated by generations of judges. There is no statutory declaration of the introduction of English criminal law into those parts of Canada that are now the Provinces of New Brunswick, Nova Scotia and Prince Edward Island. Its introduction there depends upon a principle of the common law itself by which English law was declared to be in force in uninhabited territory discovered and planted by British subjects, except in so far as local conditions made it inapplicable. The same may be said of Newfoundland although the colony dealt with the subject in a statute of 1837. In Quebec its reception depends upon a Royal Proclamation of 1763 and the Quebec Act of 1774. In each of the other provinces and in the Yukon and Northwest Territories the matter has been dealt with by statute.

The judicial systems of the provinces as they exist today are based upon the British North America Act of 1867. Sect. 91 of the Act provides that "The exclusive legislative authority of the Parliament of Canada extends to . . . the criminal law, except the constitution of courts of criminal jurisdiction but including the procedure in criminal matters". By Sect. 92 (14), the legislature of the province exclusively may make laws in relation to "the administration of justice in the province, including the constitution, maintenance and organization of provincial courts, both of civil and criminal jurisdiction and including procedure in civil matters in its courts". The Parliament of Canada may, however

* Except as otherwise credited, this Chapter has been revised in the Judicial Section, Health and Welfare Division, Dominion Bureau of Statistics.

† Prepared by the Criminal Law Section, Department of Justice, Ottawa.

(Sect. 101), establish any additional courts for the better administration of the laws of Canada. It should be noted that the Statute of Westminster, 1931 effected important changes, particularly by abrogating the Colonial Laws Validity Act, 1865 (Br.) and confirming the right of a dominion to make laws having extraterritorial operation. Particulars of the federal judiciary are given in Chapter II, pp. 94-96, and provincial judiciaries are dealt with briefly at p. 96.

At the time of Confederation each of the colonies affected had its own body of statutes relating to the criminal law. In 1869, in an endeavour to assimilate them into a uniform system applicable throughout Canada, Parliament passed a series of Acts, some of which dealt with offences of special kinds and others with procedure. Most notable of the latter was the Criminal Procedure Act, but other Acts provided for the speedy trial or summary trial of indictable offences, the powers and jurisdiction of justices of the peace in summary conviction matters and otherwise, and the procedure in respect of juvenile offenders.

Codification of the criminal law through a Criminal Code Bill founded on the English draft code of 1878, Stephen's *Digest of Criminal Law*, Burbridge's *Digest of the Canadian Criminal Law*, and the relevant Canadian statutes was brought about by the Minister of Justice, Sir John Thompson, in 1892. This Bill became the Criminal Code of Canada and came into force on July 1, 1893. It must be remembered, however, that the Criminal Code was not exhaustive of the criminal law. It was still necessary to refer to English law in certain matters of procedure and it was still possible to prosecute for offences at common law. Moreover, Parliament has declared offences against certain other Acts, e.g., the Narcotic Control Act, to be criminal offences and the same was done in the Defence of Canada Regulations and the Wartime Prices and Trade Board Regulations (neither now in force) promulgated under the authority of the War Measures Act.

It is often difficult to distinguish between 'law' and 'procedure'. Procedure may be interpreted to relate simply to the organic working of the courts but, in a wider sense, it may also affect the rights or alter the legal relations arising out of any given state of facts. For present purposes it will be useful to note that writers on jurisprudence describe law as being substantive or adjective. "Substantive law is concerned with the ends which the administration of justice seeks; procedural (adjective) law deals with the means and instruments by which these ends are to be obtained."* With reference to the criminal law, the former may be taken to include the provisions concerning criminal responsibility, the definition of 'offences' and the punishment for those offences, and the latter to include provisions for enforcement, e.g., powers to search and to arrest, for the modes of trial and for the proof of facts. Broadly speaking, the Criminal Code observes the distinction although it might appear that the provisions for preventive detention of habitual criminals and dangerous sexual offenders partake of the nature of both classes.

An examination and study of the Criminal Code was authorized by Order in Council dated Feb. 3, 1949, and the Commission assigned the task of revising the Code presented its report with a draft Bill in February 1952. After coming before successive sessions of Parliament it was finally enacted on June 15, 1954 and the new Criminal Code (SC 1953-54, c. 51) came into effect on Apr. 1, 1955. Since the new Code came into force several amendments have been made, for the most part in relation to procedure. Among the most notable of these, as well in point of procedure as of substance, are: an amendment in 1956 providing that motions for leave to appeal to the Supreme Court of Canada in criminal cases should be heard by a quorum (at least five) of judges of that Court instead of a single judge; amendments effected by SC 1959, c. 41, providing a statutory extension of the definition of "obscenity" and making provision for seizure and condemnation of offending material without a charge necessarily being laid against any person; extensive amendments relating to the allowing of time for payment of fines; amendments dealing with offences committed in aircraft in flight over the high seas; an amendment forbidding the publication in a newspaper or broadcast of a report that any admission or confession was tendered in evidence

* Salmond on *Jurisprudence*, 7th Edition, p. 496.

at a preliminary inquiry or a report of the nature of such admission or confession unless the accused has been discharged or, if the accused has been committed for trial, the trial has ended.

The Parole Act (SC 1958, c. 38), brought into force on Feb. 15, 1959, revises the parole system and provides for the establishment of a National Parole Board (see pp. 455-456).

It is most important to note that in 1960 (SC 1960, c. 44) Parliament enacted what is known as the Canadian Bill of Rights. Although the Act sets out further details, its general scope appears in Sect. 1, which reads as follows:—

"1. It is hereby recognized and declared that in Canada there have existed and shall continue to exist without discrimination by reason of race, national origin, colour, religion or sex, the following human rights and fundamental freedoms, namely,

- (a) the right of the individual to life, liberty, security of the person and enjoyment of property, and the right not to be deprived thereof except by due process of law;
- (b) the right of the individual to equality before the law and the protection of the law;
- (c) freedom of religion;
- (d) freedom of speech;
- (e) freedom of assembly and association; and
- (f) freedom of the press."

Although the Bill of Rights has been invoked on various occasions, the courts have not held it to affect the operation of the Criminal Code.

In 1961 (SC 1960-61, cc. 43-44), the offence of murder was divided into capital and non-capital, the death penalty was abolished in relation to the offence of non-capital murder, and the term *criminal sexual psychopath* was dropped and the term *dangerous sexual offender* substituted; in 1965 (SC 1964-65, c. 53) provision was made for the right to appeal in *habeas corpus* proceedings.

The concept of "non-capital murder" was introduced into Canadian criminal law in 1961. At that time, capital murder was defined to include, for example, planned and deliberate murder, murder in the course of certain violent acts and murder of peace officers and prison officers. Life imprisonment was substituted for the death penalty in cases where the accused was convicted of non-capital murder. In 1966, the House of Commons, on a free vote, rejected a Bill under which the death penalty for murder would have been completely abolished but in 1967 (SC 1967-68 c. 15) an Act was passed under which the definition of capital murder is restricted to the murder of peace officers or prison officers. This Act was brought into force on Dec. 29, 1967, and will continue in force for a period of five years from that day. The Act will then expire unless before the end of the five-year period Parliament by a joint resolution of both Houses directs that it shall continue in force. If the Act is not continued in force before the expiry of the five-year period, the broader definition of capital murder introduced in 1961 will again come into operation. It should be noted that the law contains a provision whereby a person in respect of whom sentence of death has been commuted or a person who has been sentenced to life imprisonment for capital murder shall not be released without the prior approval of the Governor in Council.

A Bill (C-195) proposing a number of changes in criminal law and procedure was introduced and given first reading in the House of Commons on Dec. 21, 1967.* The proposals relating to the Criminal Code constitute the most comprehensive review of that Code since it came into force on Apr. 1, 1955. Among the changes to the substantive law proposed in the Bill are amendments relating to gaming and lotteries, "drinking and driving", homosexual acts and therapeutic abortion.

* At date of printing (March 1968) this Bill had not yet come before the House of Commons for second reading.

At present, lotteries and games of chance or mixed chance and skill are, with limited exceptions, unlawful. Under the proposals in the Bill, it would be lawful for the Federal Government to conduct a lottery and for a provincial government to pass legislation enabling it to conduct a lottery either alone or in conjunction with one or more other provincial governments. The proposals would also enable provincial authorities to issue licences under which charitable and religious organizations would be authorized to conduct lotteries and games and under which agricultural fairs and exhibitions would no longer be restricted to lotteries and games conducted on the exhibition grounds.

Under a proposed amendment in the Bill, a person would be guilty of an offence if he drives a motor vehicle while the proportion of alcohol in his blood exceeds one tenth of one per cent. It would be compulsory for a driver to take a blood test when required to do so by a peace officer who has reasonable and probable grounds to believe that the person's ability to drive is impaired and it would be an offence for a person to fail or refuse without reasonable excuse to take a blood test when so required. It is also proposed that, where such blood test is taken within two hours of the alleged offence and the various conditions set out in the legislation relating to the taking of the test are complied with, the result of the test would be *prima facie* evidence of the proportion of alcohol in the driver's blood.

The Bill also contains provisions whereby therapeutic abortion would not be unlawful where the operation is carried out after the therapeutic abortion committee of an accredited hospital has certified that the continuation of the pregnancy would or would be likely to endanger the life or health of the female. Under the proposed amendments, the operation could be performed only by a duly qualified medical practitioner and only in an accredited hospital and the Minister of Health of a province would be entitled to information relating to the issue of a certificate and to the operation.

The Bill also contains a provision, the principal effect of which would be to remove from the ambit of the criminal law homosexual acts committed in private between two consenting adults.

Other significant changes proposed in the Bill relate to the publication of the evidence at preliminary enquiries, the procedure in the case where an accused person may be unfit to stand trial, the use of suspended sentence and probation, and certain new rights of appeal.

As noted earlier in this Section, an amendment was made to the Criminal Code in 1959 restricting the publication of an admission or confession at a preliminary inquiry. Under a proposal contained in the Bill, provision would be made whereby, on the application of the accused, the magistrate or justice holding a preliminary inquiry may make an order forbidding publication of *any* of the evidence until the accused has been discharged or, if he has been committed for trial, the trial has ended. Apart from such an order, of course, the present prohibition against publishing an admission or confession would remain.

At present, where there is reason to believe that the accused person is unfit on account of insanity to stand trial, the issue of his fitness to stand trial is decided as soon as it arises. If the court decides that the accused is not fit to stand trial, he is detained in custody at the pleasure of the Lieutenant-Governor. As the merits of the case against him are not tried, it is possible for an innocent person to be so detained. Under the proposed amendments, the court would have the power to postpone dealing with the issue of fitness to stand trial until after the prosecutor has presented his evidence. If the prosecutor's evidence is not sufficiently strong to make out a case, the accused would be acquitted and set free. If he required treatment for a mental condition, he would be dealt with under the applicable provincial mental health legislation instead of under the Criminal Code. In addition, in order to safeguard the rights of those persons who are found unfit to stand

trial and therefore detained in custody, the Lieutenant-Governor of the province would be authorized to appoint a board to review at least every six months the case of every person so detained. This same board would also review at least every six months the case of every person who is held in custody in the province following an acquittal on account of insanity at the time the offence was committed.

In regard to sentence, the Bill contains provisions which would enable courts to make more liberal use of suspended sentences, with or without probation. At present, the fact that the offender has more than one previous conviction generally prevents the court from suspending the passing of sentence. The proposed amendments would remove this restriction; would enable probation orders to be transferred from one province to another; would enable the court to make a probation order in addition to a sentence of imprisonment not exceeding two years; and would make it a substantive offence, punishable on summary conviction, for a person on probation wilfully to refuse to comply with the probation order.

The Bill also contains amendments relating to appeals by way of new trial in summary conviction cases which are designed to make the institution of such appeals less complicated and costly. At present, for example, the appellant must supply the appeal court with a transcript of the evidence taken at the trial, unless the appeal court makes an order dispensing with such transcript. Under a proposal contained in the Bill, it would no longer be necessary for the appellant to provide the transcript unless the appeal court specifically ordered him to do so.

The Bill also proposes to narrow the definition of "dangerous sexual offender" which was introduced in 1961 (SC 1960-61, cc. 43-44) and to give the court of appeal express power to order a new hearing in the case of an appeal arising out of an application for preventive detention of a person as a habitual criminal or as a dangerous sexual offender.

Section 2.—Adult Offenders and Convictions

Offences may be classified under two headings, "indictable offences" and "offences punishable on summary conviction". Indictable offences are grouped in two main categories: (1) offences that violate the Criminal Code and (2) offences against federal statutes. These include the graver crimes. Offences punishable on summary conviction—those not expressly made indictable—include offences against the Criminal Code, provincial statutes and municipal by-laws. It is debatable how far some summary conviction offences are of a criminal nature and whether their increase indicates an increase in crime. Many are breaches of municipal by-laws and contrary to public safety, health and comfort, as, for example, parking violations or practising trades without licence but, on the other hand, summary conviction offences may include such serious charges as assault and contributing to juvenile delinquency.

The following Subsection 1 deals with adults convicted of indictable offences, Subsection 2 with young adult offenders convicted of indictable offences, Subsection 3 with convictions for summary conviction offences and Subsection 4 with appeals.

Subsection 1.—Adults Convicted of Indictable Offences

Statistics of indictable crimes are based on persons, so that it may be possible to evaluate the population engaged in prohibited activities and to help in the treatment of anti-social behaviour in terms of subject-centred action. In the present counting system, although individuals may be charged with more than one offence, only one offence is tabulated for each person. This offence is selected according to the following criteria:

(1) if the person were tried on several charges, the offence selected is that for which proceedings were carried to the farthest stage—conviction and sentence; (2) if there were several convictions, the offence selected is that for which the heaviest punishment was awarded; (3) if the final result of proceedings on two or more charges were the same, the offence selected is the more serious one, as measured by the maximum penalty allowed by the law; (4) if a person were prosecuted for one offence and convicted of another—for example, charged with murder and convicted of manslaughter—the offence selected is the one for which the person was convicted.

In 1965 there were 46,662 adults charged with 83,796 indictable offences, of whom 41,832 were found guilty of 75,300 offences. In the previous year there were 46,551 adults charged with 84,546 indictable offences, of whom 42,097 were found guilty of 76,310 offences.

1.—Persons Charged and Persons Convicted of Indictable Offences, with Ratio per 100,000 Population 16 Years of Age or Over, by Province, 1964 and 1965

Province or Territory	Persons Charged		Persons Convicted				Persons Convicted per 100,000 Population 16 Years of Age or Over

Canada.....	46,551	46,662	42,097	90.4	41,832	89.6	340	330

Table 2 classifies indictable offences by type of offence for 1964 and 1965. Class I covers offences against the person and in 1965 there were 6,072 males and 313 females convicted in this category, mostly for assaults of various kinds. Classes II to IV deal with offences against property. Thefts predominate among the offences in these classes, and breaking and entering and robbery, serious crimes which involve acts of violence, are the next most numerous. Class V deals with offences relating to currency and Class VI with miscellaneous offences; among the latter, the most numerous convictions are for offences connected with gaming, betting and lotteries. In 1965 there were 279 men and 124 women convicted under federal statutes of whom 225 men and 119 women were offenders under the Narcotic Control Act.

Female Offenders.—There were 4,840 female offenders convicted of indictable offences in 1965 compared with 4,170 in 1964. Of these offenders, Ontario accounted for 1,868, Quebec for 1,010 and British Columbia for 705. The ratio of female offenders convicted to total persons convicted moved upward from 9.9 p.c. in 1964 to 11.6 p.c. in 1965, ranging from 4.6 p.c. in the Yukon and Northwest Territories to 13.7 p.c. in Manitoba.

4.—Females Convicted of Indictable Offences, by Province, 1964 and 1965

Multiple Convictions.—Table 5 shows the number of persons having more than one conviction at a court appearance for the years 1961 to 1965. Multiple convictions occur most often in cases of forgery and uttering, false pretences, theft, having in possession, and breaking and entering.

5.—Persons Convicted of More than One Offence at the Time of Trial compared with Persons Convicted of One Offence, 1961-65

Disposition of Cases and Previous Convictions.—As shown in Table 1, p. 439, of all suspects before the courts for indictable offences in 1965, 89.6 p.c. were adjudged guilty. There was, however, considerable variation among the provinces in this respect, the proportion ranging from 87.5 p.c. in British Columbia to 97.3 in Prince Edward Island.

Table 6 shows that of the 41,832 persons convicted in 1965, 26.2 p.c. had no previous conviction, 14.0 p.c. had previously been found guilty of one offence and 32.6 p.c. had two or more earlier convictions; court records for the other 27.2 p.c. were not obtained. There is little change in these percentages from year to year.

Subsection 2.—Young Adult Offenders (16-24 Years) Convicted of Indictable Offences

Attention has been focused in recent years on the needs of the young adult offenders of from 16-24 years of age who constitute a promising field for modern reception and diagnostic facilities equipped with educational, trade training and other formative disciplines. The young men and women in this age group account for 21.9 p.c. of the total population 16 years of age or over, but they form over half the criminal population

committing indictable offences. The group includes some of the most daring offenders who already may be experienced criminals as well as first offenders likely to be turned from crime by further education and training. There were 22,392 young adult offenders in 1965, a total little changed from the previous year.

Subsection 3.—Convictions for Summary Conviction Offences

Offences punishable on summary conviction are triable by magistrates and justices of the peace under Part XXIV of the Criminal Code (SC 1953-54, c. 51) or under the provincial summary conviction Acts as the case may be. Data relating to these offences are based on convictions; no information is available on either the number of persons involved in these offences or the number of charges. In these cases, following arrest or summons to appear in court, the accused person must be tried by a magistrate or justice of the peace without the intervention of a jury. Such cases are heard in police court with a minimum of delay.

Subsection 4.—Appeals

Appeal is an important safeguard in Canada's legal system and the conviction of a judge and jury or a judge may be appealed on the grounds that the verdict was unreasonable, that there was a wrong decision on some question of law or that there was a miscarriage of justice. In 1965 there were 3,097 appeals in indictable cases disposed of by the courts, of which 126 were Crown appeals and 2,971 appeals of the accused. Of the Crown appeals, 41 were from acquittal and 85 from sentence; of the appeals of the accused, 1,220 were from conviction and 1,751 from sentence. Appeals in summary conviction cases disposed of by the courts numbered 1,774 in 1965. Of these, 157 were appeals of the informant and 1,617 appeals of the accused. The informant appeals comprised 138 from acquittal and 19 from sentence and appeals of the accused comprised 1,413 from conviction and 204 from sentence.

Section 3.—Juvenile Delinquents

Juvenile Delinquent, as defined in the Juvenile Delinquents Act, means any child who violates any provision of the Criminal Code or of any federal or provincial statute, or of any by-law or ordinance of any municipality, or who is guilty of sexual immorality or any similar form of vice, or who is liable by reason of any other act to be committed to an industrial school or juvenile reformatory under the provision of any federal or provincial statute. The commission by a child of any of these acts constitutes an offence known as a delinquency.

The upper age limit of children brought before the juvenile courts in the provinces varies. The Act defines a child as meaning any boy or girl apparently or actually under the age of 16 years, or such other age as may be directed in any province. In Prince Edward Island, Nova Scotia, New Brunswick, Ontario and Saskatchewan under 16 is the official age; in Alberta under 16 for boys and under 18 for girls; in Newfoundland under 17; in Quebec, Manitoba and British Columbia under 18 years. In the interests of uniformity, it has been the practice of the Dominion Bureau of Statistics to publish information about juvenile delinquents 16 years of age or over in the annual report on *Statistics of Criminal and Other Offences* and to publish data relating to those under 16 years of age in a report entitled *Juvenile Delinquents*. In 1965, 3,437 juveniles 16 and 17 years of age were found delinquent in those provinces where the upper age limit is under 17 or under 18 years of age.

Included in the statistics of juvenile delinquents are cases (alleged as well as adjudged) which were brought before the courts and dealt with formally. A case was counted separately each time a child appeared before the court for a new delinquency or delinquencies. In instances where multiple delinquencies were dealt with at one court appearance, only one delinquency—the most serious—was selected for tabulation. Delinquencies reported as informal cases by the courts were not included nor were cases of children presenting conduct problems which were not brought to court or which were dealt with by the police, social agencies, schools or youth-serving agencies. Thus, community facilities for dealing with children's problems may have an influence on the number of cases referred to court and, therefore, an effect on the statistics of juvenile delinquents.

Section 4.—Correctional Institutions and Training Schools**Subsection 1.—Statistics of Correctional Institutions and Training Schools**

Correctional institutions may be classified under four headings: (1) Penitentiaries—operated for adult offenders by the Federal Government in which, generally speaking, sentences of over two years are served; (2) Reformatories—operated for adult offenders by the provinces in which individual sentences of up to two years are served; (3) Common Gaols—operated for adult offenders by the provinces or counties in which sentences of up to two years can be served but in which, generally speaking, short-term sentences are served; and (4) Training Schools—operated by the provinces or private organizations under provincial charter for juvenile offenders serving indefinite terms up to the legal age for children in the particular province.

There is a limited amount of statistical information available with respect to these types of institution. "In custody" figures shown in Table 23 for penitentiaries refer only to those persons under sentence, but the figures for admissions include those received

from courts as well as by transfer from other penitentiaries and by cancellation of tickets-of-leave and paroles. Figures for releases include expiry of sentences, transfers between penitentiaries, releases on ticket-of-leave and parole, deaths, pardons and releases on court order. In-custody figures for provincial and county institutions may include, in addition to those serving sentences, persons awaiting trial, on remand for sentence or psychiatric examination, awaiting appeal or deportation, any others not serving sentence and, for training school population, juveniles on placement.

Population figures in Tables 23 and 24 are for a given day of the year, which is Mar. 31 except for Quebec gaols where populations are counted as of Dec. 31. These figures represent, in effect, a yearly census of correctional institutions and, as such, are not indicative of the daily average population count. For instance, if an abnormal number of commitments is made to a certain institution on or just prior to Mar. 31, the result will be an unrepresentative population total for the institution in that year.

With regard to the fluctuations that might have occurred during the year between census days, the total population of correctional institutions has shown a general increase since Mar. 31, 1961; however, totals for each type of institution have recently shown a tendency to level off or decline slightly.

Subsection 2.—The Canadian Penitentiary Service*

The Penitentiary Service operates under the Penitentiary Act (SC 1960-61, c. 53) and is under the jurisdiction of the Solicitor General of Canada. It is responsible for all federal penitentiary institutions and for the care and training of persons sentenced or committed thereto. The Commissioner of Penitentiaries, under the direction of the Solicitor General, has control and management of the Service and all matters connected therewith. In the year ended Mar. 31, 1967, the federal penitentiary system consisted of six maximum security, six medium security and 15 minimum security institutions, all for males; one prison for women; one maximum security prison camp for males of the Freedomite Doukhobor Sect; one security institution for elderly recidivists; and three Correctional Staff Colleges.

The six maximum security institutions receive inmates sentenced by the courts to imprisonment for terms of from two years to life. These are located at New Westminster, B.C., Prince Albert, Sask., Stony Mountain, Man., Kingston, Ont., St. Vincent de Paul, Que., and Dorchester, N.B. Persons sentenced to penitentiary terms in Newfoundland are held in the provincially operated institution at St. John's, under financial arrangements authorized by Sect. 14 of the Penitentiary Act (SC 1960-61, c. 53).

The medium and minimum security institutions and the camps receive inmates transferred from the maximum security (receiving) institutions on the basis of their suitability for special forms of training, including vocational training. Of the medium security institutions, two—Collins Bay Penitentiary and the Joyceville Institution—are

* Prepared under the direction of A. J. MacLeod, Commissioner of Penitentiaries, Ottawa.

within a few miles of Kingston; the Federal Training Centre and the Leclerc Institution are close to St. Vincent de Paul; and the two other institutions are located at Matsqui, B.C., and Cowansville, Que.

Eight minimum security correctional camps are operated as extensions of a main institution in their respective areas. These are located at William Head and Agassiz, B.C.; Beaver Creek and Landry Crossing near Bracebridge and Petawawa, Ont.; Gatineau (Gatineau Park) and Valleyfield, Que.; Blue Mountain near Gagetown, N.B.; and Springhill, N.S. Six minimum security farm annexes operate as extensions of the penitentiaries at Dorchester, St. Vincent de Paul, Collins Bay, Joyceville, Stony Mountain and Prince Albert, respectively. There is also a minimum security industrial satellite at St. Vincent de Paul.

The Prison for Women at Kingston, Ont., receives inmates transferred upon committal to penitentiary in any part of Canada.

The special security Prison Camp for Freedomites who have been sentenced to imprisonment in penitentiary is located near Agassiz, B.C., and is called Mountain Prison. When the sentences of the female Doukhobor prisoners were completed, part of Mountain Prison was converted to an institution for older recidivists.

Five new institutions were in various stages of construction during 1966-67: one maximum security institution at Ste. Anne des Plaines, Que., medium security institutions at Springhill, N.S., Warkworth, Ont., and Drumheller, Alta., and a Special Correctional Unit at St. Vincent de Paul, Que.

Three Correctional Staff Colleges—one at Kingston, one at St. Vincent de Paul and one at New Westminster—are operated for the training of recruits and for the advanced training of penitentiary officers. The Kingston College serves English-speaking or bilingual officers, the St. Vincent de Paul College is primarily for French-speaking officers from all parts of Canada, and the Western Staff College trains the recruits for the institutions in the Western Region. These Staff Colleges provide excellent facilities for Service-wide conferences of institutional heads and other special groups of officers.

The Headquarters of the Service is located in Ottawa. Regional directorates have been established at New Westminster, B.C., Kingston, Ont., and St. Vincent de Paul, Que., for the Western, Ontario and Quebec areas, respectively.

Subsection 3.—The National¹ Parole System*

Parole is a means by which an inmate in any correctional institution in Canada, if he gives definite indication of his intention to reform, can be released from prison. The purpose of parole is the protection of society through the rehabilitation of the inmate. It is essential for the public to understand that the true purpose of punishment should be the reformation of the offender and not just vengeance or retribution but, since the Parole Board is as much concerned with the protection of society as with the reformation of the inmate, it recognizes that the welfare of an individual inmate must not be allowed to impair the success of the parole system or the public safety.

It is the function of the Parole Board to select those inmates who show some sincere intention to reform and to assist them in doing so by granting parole. The inmate then is allowed to serve the remainder of his sentence in society, but under supervision. He is subject to restrictions and conditions as to his conduct and behaviour, designed for his welfare and the protection of others. The Board is not a reviewing authority and is not concerned with the propriety of the conviction or the length of the sentence but only with the problem of deciding in each case whether or not there is chance of reformation. Parole is not a matter of clemency and is not granted on compassionate or humanitarian grounds but only if there appears to be at least a reasonable chance that the inmate will lead a law-abiding life. The treatment and training program in the institution is a vital part of the

* Prepared by T. G. Street, Chairman, National Parole Board, Ottawa.

correctional process and parole is an extension of this training outside the institution. It is not a matter of pampering prisoners but of trying to give as many of them as possible a chance to rehabilitate themselves.

The National Parole Board, composed of a chairman and four members (one woman), was formed in January 1959. It operates under the authority of the Parole Act (SC 1958, c. 38) which came into force on Feb. 15, 1959, replacing the Ticket-of-Leave Act. The Board has jurisdiction over any adult inmate of any prison in Canada convicted of an offence against an Act of the Parliament of Canada; it also has jurisdiction to revoke or suspend any sentence of whipping or any order made under the Criminal Code prohibiting any person from operating a motor vehicle.

The decision of the Board with respect to any one inmate is based on reports it receives from the police, from the trial judge or magistrate and from various people at the institution who deal with him. Reports are also obtained, when available, from a psychologist or psychiatrist and, if necessary, a community investigation is conducted to secure as much information as possible about his family and background, his work record and his position in the community. From these reports, an assessment is made to determine whether or not he has changed his attitude and is likely to lead a law-abiding life.

An inmate need not obtain the services of a lawyer to apply for parole. He may apply by sending a letter to the Board and is assisted in preparing such an application at the institution, or another person may apply on his behalf. The Board automatically reviews all sentences of over two years. As soon as an application is received, investigation is begun and the results presented to the Board for decision. All applications and reports are processed by the Parole Board staff at Ottawa but regional officers, of whom there are 55 stationed at 16 centres across the country, interview applicants for parole in their respective areas, giving them an opportunity of making verbal representations to a representative of the Board. The regional officers submit to the Board a report of each interview with an assessment of the inmate's suitability for parole.

A person on parole is under the care of a supervisor, usually an after-care agency worker or a probation officer, who reports to the regional officer. If he violates the conditions of his parole or commits a further offence or misbehaves in any manner, the Board may revoke his parole and return him to the institution to serve that part of his sentence outstanding at the time his parole was granted. If a parolee commits an indictable offence, his parole is automatically forfeited and he is returned to the institution to serve the unexpired balance of his sentence plus any new term to which he is sentenced for the commission of the new offence. The regional officer may also issue a Warrant of Suspension and have a parolee placed in custody if it is necessary to prevent a breach of any term or condition of the parole. These officers are thus able to exercise effective and adequate control over all parolees in their respective areas.

During the past eight years, the Board granted parole to 15,364 inmates. This figure includes 608 minimum paroles but does not include short paroles, temporary paroles or paroles for deportation; the inclusion of the latter three would bring the total to 17,166. Of the total, only 1,823 persons violated their parole and were returned to prison; 920 had their parole revoked and 906 forfeited their parole by committing another offence. On the other hand, during the eight-year period, 90 p.c. of those paroled successfully completed their parole period.

Section 5.—Police Forces and Crime Statistics

Organization of Police Forces.—The police forces of Canada are organized in three groups: (1) the federal force, which is the Royal Canadian Mounted Police; (2) provincial police forces—the Provinces of Ontario and Quebec have their own provincial police forces but all other provinces engage the services of the Royal Canadian Mounted Police to perform parallel functions within their borders; and (3) municipal police forces—most urban centres of reasonable size maintain their own police force or engage the services of the pro-

vincial police, under contract, to attend to police matters. In addition, the Canadian National Railways, the Canadian Pacific Railway Company and the National Harbours Board have their own police forces.

The Royal Canadian Mounted Police.—The Royal Canadian Mounted Police is a civil force maintained by the Federal Government. It was established in 1873 as the North-West Mounted Police for service in what was then the North-West Territories and, in recognition of its services, was granted the use of the prefix "Royal" by King Edward VII in 1904. Its sphere of operations was expanded in 1918 to include all of Canada west of Port Arthur and Fort William and in 1920 it absorbed the Dominion Police, its headquarters was transferred from Regina to Ottawa and its title was changed to Royal Canadian Mounted Police.

The Force is under the control of the Solicitor General of Canada and is headed by a Commissioner who holds the rank and status of a Deputy Minister. Officers are commissioned by the Crown and are selected from the non-commissioned ranks. The Force has complete jurisdiction in the enforcement of the federal statutes. By arrangement between the federal and provincial governments, it enforces the provincial statutes and the Criminal Code in all provinces exclusive of Ontario and Quebec and under special agreement it polices some 138 municipalities (as of Apr. 1, 1967). It is the sole police force in the Yukon and Northwest Territories, where it also performs various administrative duties on behalf of certain departments of the Federal Government. It maintains liaison officers in London and Washington and represents Canada in the International Criminal Police Organization, which has headquarters in Paris.

Of the Force's 18 divisions, 12 are actively engaged in the work of law enforcement, as are some 43 subdivisions and 662 detachments. The six remaining divisions are "Headquarters", "Depot", "N" and "P" which are maintained as training centres, and "Marine" and "Air", which support the operations of the land divisions. A teletype system links the widespread divisional headquarters with the administrative centre at Ottawa and a network of fixed and mobile radio units operates within the provinces. Focal point of the Force's criminal identification work is the Headquarters Identification Branch; its services, together with those of the divisional and subdivisional units and the four Crime Detection Laboratories, are available to police forces throughout Canada. The Force operates the Canadian Police College at which Force members and selected representatives of other Canadian and foreign police forces may study the latest advances in the fields of crime prevention and detection.

The uniform strength of the Force in April 1967 was 8,086, including marine constables and special constables, at which time it maintained some 2,258 motor vehicles, 21 aircraft, 56 ships and boats, 232 sleigh dogs, 33 police service dogs and 176 horses.

Quebec Provincial Police Force.—The Quebec Provincial Police Force is responsible for the maintenance of peace, order and public safety in the province, and for the prevention and investigation of criminal offences and of violation of all laws of the province.

The province is divided into two almost equal parts known as the Montreal Division and the Quebec Division. The Montreal Division has five subdivisions with headquarters at Granby, Hull, Montreal, Rouyn and Sherbrooke; the Quebec Division has four subdivisions with headquarters at Baie Comeau, Chicoutimi, Quebec and Rimouski. There are 112 detachments throughout the province—62 in the Montreal Division and 50 in the Quebec Division. The Force at the end of 1966 had 2,440 regular members—officers, non-commissioned officers and constables.

The Quebec Provincial Police Force is under the command of a Director General who is assisted by an officer holding the rank of Deputy Director General. Each Division is headed by an Assistant Director. A commissioned officer is in command of each subdivision.

Ontario Provincial Police Force.—The Ontario Provincial Police Force is the third largest deployed force on the North American Continent, having a total authorized strength of over 4,200 (1967); it enforces federal and provincial law in areas of Ontario

that do not maintain a police department and on all King's Highways. The Force is administered from General Headquarters at Toronto by a Commissioner who has the rank and status of a Deputy Minister under the Attorney General. Other senior executive officers include two Deputy Commissioners and five Assistant Commissioners. The Force has two principal sections—Operations and Services—which are administered under the supervision of the Deputy Commissioner, Operations and the Deputy Commissioner, Services, respectively. In turn, five divisions at the next level are administered by their respective Assistant Commissioners: Assistant Commissioner, Field; Assistant Commissioner, Traffic; Assistant Commissioner, Administration; Assistant Commissioner, Staff Services; and Assistant Commissioner, Special Services. Specialized branches under Special Services include Criminal Investigation, Liquor Law Enforcement, Precious Metals Theft, Anti-gambling, Anti-rackets, Auto Theft, and Intelligence Branches. Under Administration, the Central Records Branch offers a 24-hour, seven-day-week service to all police departments in Ontario on such matters as fingerprints records, criminal records, drycleaning and laundry mark identification, photographic service, stolen and recovered property lists.

In addition to policing those parts of Ontario that are without municipal police forces, the Ontario Provincial Police Force is responsible for providing specialized services to the municipal forces in the investigation of serious crime and, upon request, supplies sufficient manpower to ensure proper policing within the municipalities in emergency situations.

In the field, there are 209 detachments controlled through 17 district headquarters located at Chatham, London, Burlington, Niagara Falls, Downsview, Mount Forest, Barrie, Peterborough, Belleville, Perth, Long Sault, North Bay, Sudbury, Sault Ste. Marie, South Porcupine, Port Arthur and Kenora. Twenty municipalities are policed under special contract.

The Force operates one of the largest frequency-modulation radio networks in the world, with 84 fixed radio stations and more than 1,100 radio-equipped mobile units, including motorcycles, marine units and aircraft. The Force also operates an inter-provincial telecommunications network connecting all 17 districts as well as other police departments on a local, national and international basis. Because of territorial peculiarities, the northern districts augment their normal transportation facilities by the use of snow vehicles, air boats, dog teams and a variety of rail transport facilities.

In addition to regular constable recruitment, the Force has a cadet program, making it possible for qualified young men to create for themselves a career in a long-established police force. A recent important development in the progress of this Crown Force occurred when legislative enactment provided that all ranking officers from inspector up to and including the Commissioner, receive the Queen's Commission in the same manner as the Armed Forces.

Municipal Police Forces.—Provincial legislation makes it mandatory for cities and towns to furnish adequate municipal policing for the maintenance of law and order in their communities. Also, all villages and townships or parts of townships that have a population density and a real property assessment sufficient to warrant maintenance of a police force, and have been so designated by Order in Council, are made responsible for the adequate policing of their municipalities.

Uniform Crime Reporting.—The present method of reporting police statistics (police administration, crime and traffic enforcement statistics), known as the Uniform Crime Reporting Program, was started on Jan. 1, 1962, and was developed by the Dominion Bureau of Statistics in co-operation with the Canadian Association of Chiefs of Police Committee on Uniform Crime Reporting. Previously, the definitions and methods for collecting police statistics were not uniform and the data could not be expressed with consistency on a national, provincial or local basis but, with the development of the Uniform Crime Reporting Program, meaningful statistical aggregates became possible. The police were supplied with a manual of instructions containing standard definitions for the reporting of police administration, crime and traffic enforcement statistics on specially designed statistical forms to be submitted to the DBS.

Police Personnel.—As shown in Table 25, police personnel in Canada numbered 40,368 at the end of 1966, including 34,069 sworn-in policemen, 5,823 other full-time employees serving as clerks, technicians, artisans, commissionaires, guards, special constables, etc., and 476 cadets. The ratio of police personnel per 1,000 population was 2.0 and the ratio of police was 1.7. Provincial ratios for police personnel ranged from 1.1 to 4.3 per 1,000 persons and for police only from 0.9 to 4.2. In 12 selected metropolitan areas there were 14,683 police personnel including 12,764 police and 1,919 cadets and other full-time employees. Total municipal police personnel numbered 23,408 made up of 22,154 in municipal forces, and 1,166 Royal Canadian Mounted Police and 88 provincial police under municipal contracts.

There were two policemen killed by criminal action in 1966 and nine policemen and one civilian employee lost their lives accidentally while on duty. Police transport facilities at the end of the year included 6,278 automobiles, 931 motorcycles, 614 other motor vehicles, 377 boats, 21 aircraft, 261 horses and 83 service dogs.

Crime Statistics.—Table 27 shows the number of crimes dealt with by the police in 1966, including offences under the Criminal Code, federal statutes, provincial statutes and municipal by-laws; offences cleared by charge and otherwise; and the number of adults and juveniles charged. Offences reported or known to the police but proved unfounded are not shown in the table but numbered 51,791, including 43,541 under Criminal Code classifications, 2,815 under federal statutes, 4,293 under provincial statutes and 1,142 under municipal by-laws, excepting traffic.

During 1966, the police reported 63,676 offences committed against the person, including 220 murders, 8,792 rape and other sexual offences, and 54,505 offences of wounding and other assaults (not indecent); all offences against the person resulted in the charging of 25,630 persons, 1,614 of them juveniles. During the year there were 419,892 cases of robbery, theft and other offences against property, resulting in 83,369 persons charged, 26,488 of them juvenile males and 2,745 juvenile females; 37,798 cases of fraud, false pretences, forgery, etc.; 2,166 of prostitution; 2,285 gaming and betting; 3,651 offensive weapons; and 173,341 other Criminal Code offences. In addition to the 34,569 federal statute offences reported, 1,184 were under the Narcotic Control Act and 241 under the controlled drug part of the Food and Drugs Act; these two classifications resulted in the charging of 809 persons.

Provincial and territorial fire marshals and commissioners reported 1,913 suspected or known incendiary offences, of which 268 were proved unfounded; 412 offences were reported cleared by charge, resulting in 313 adults and 187 juveniles being charged.

The number of motor vehicles stolen was 39,023 (an estimated 555 per 100,000 vehicles registered); 37,022 or 94.9 p.c. of these vehicles were recovered. Police were asked to locate 20,769 missing adults and 30,965 missing juveniles; 19,828 adults and 30,726 juveniles were found. The number of drownings reported by the police was 1,443.

¹ Except traffic.² Except traffic, Narcotic Control Act and Food and Drugs Act.

During 1966, police departments in Canada reported 89,751 Criminal Code traffic offences, resulting in 59,430 persons charged, 1,319 of them females. Total charges reported under federal statutes numbered 9,698, provincial statutes 1,509,598 and municipal

by-laws 373,218, excluding parking violations; the latter numbered 4,277,830, most of them reported by municipal police. There are certain traffic offences under provincial statutes which are almost identical to those under the Criminal Code. These were first reported separately in 1966 and are shown at the foot of Table 28.

The number of traffic accidents reported was 638,073, of which 4,405 involved fatalities, 108,690 resulted in injuries, 336,056 involved property damage of over \$100 and 188,922 involved damage of \$100 or less. There were 5,274 persons killed in traffic accidents, including 3,721 drivers and passengers, 1,311 pedestrians, 201 cyclists and 41 others; persons injured numbered 158,106.

CHAPTER X.—LAND USE AND RENEWABLE RESOURCE DEVELOPMENT*

CONSPECTUS

	PAGE		PAGE
SECTION 1. LAND RESOURCES.....	465	SECTION 3. INTERNATIONAL BOARDS AND COMMISSIONS.....	468
SECTION 2. FEDERAL AGENCIES CONCERNED WITH RESOURCE USE.....	465	SECTION 4. FEDERAL AND FEDERAL-PROVINCIAL RESOURCE DEVELOPMENT PROGRAMS	469

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. xvi of this volume.

Canada's era of settlement ended as the northern areas of the Prairie Provinces came under cultivation in the 1930s. Government policies, previously directed mainly toward the large-scale utilization of natural resources, have evolved toward concern with land use and the socio-economic circumstances of people involved in renewable resource-based industries. Undiscriminating land settlement policies and ill-advised individual choices had resulted in the settlement of some submarginal land throughout Canada, but most notably in the southern areas of Alberta and Saskatchewan, creating requirement for land-use adjustment even before settlement had been completed. Far more significant than this, however, is the technological revolution in agriculture which has occurred during the past three decades concurrently with improvements in transportation and a strong trend toward the concentration in urban centres of a growing population.

Accompanying these changes has been an altered pattern of land use resulting from individual response to economic factors; but the rate of such adjustment has not been concomitant to the magnitude of the socio-economic dislocation in rural areas. Because of this situation, and because of increased concern with forest management, water pollution control, recreational resources and wildlife management, the trend has been for a vast increase in public decision-making with respect to resource management and use. Implicit in this has been the need for improved legislative-administrative organization relative to natural resources.

Early federal investigations of significance to the general problem of organization for resource use were: the Senate of Canada Special Committee on Land Use, established in 1957 and continuing until 1963; the House of Commons Standing Committee on Mines, Forests and Waters; and the National Conference on Reconstruction held in 1945. Notable among several provincial government activities along similar lines is the annual British Columbia resources conference.

One of the most important responses to this need was the "Resources for Tomorrow" Conference held in 1961 to permit examination of problems of resource use and of developing an organizational framework suited to the modern requirement for integrated, comprehensive resource-use planning for social and economic development. Subsequent to this Conference, the Canadian Council of Resource Ministers, composed of one representative from each province and one from the Federal Government, was established to perform a similar function on a continuing basis, with the aid of a Montreal-based staff.

* Revised in the office of the Canadian Council of Resource Ministers, Montreal, Que.

One of the major specific concerns of the Council has been water resource management. Relevant activities have included a major conference on pollution, held in the autumn of 1966 for the purpose of formulating realistic guidelines to assist federal, provincial and municipal governments in developing programs to meet the challenge of pollution. An investigation was made by the Council of the administration of water resources in Canada; a report was published in 1965 and updated in 1968. A major workshop seminar on water is planned for the autumn of 1968.

In keeping with its general concern for optimal use of available resources, the Council has done investigative and liaison work to ensure that fundamental data are available to guide the allocation of resources to outdoor recreation and has prepared other documents that have assisted in developing liaison between and within governments. As part of its role in information gathering and exchange, the Council maintains liaison with international bodies concerned with natural resources, and participates in international programs such as the International Hydrological Decade and the International Biological Program.

Constitutionally, administration and disposition of natural resources rest mainly with the provincial governments. Under the British North America Act, fisheries were under federal jurisdiction and the federal and provincial governments shared legislative authority with respect to agriculture, international and interprovincial waters, etc., with federal legislation taking precedence over provincial legislation should conflict arise; however, subsequent interpretations of the Act have established most aspects of control of resources as being matters of provincial jurisdiction. As well, in the years following Confederation certain provinces, by agreement, assumed varying degrees of responsibility for administering the fisheries legislation and other federal resources legislation. Within this general framework, the Federal Government has taken certain steps to establish a national resources policy, to co-ordinate the activity of the various federal departments concerned with resources and relevant social and economic problems, to undertake or share in research, and to provide initiative and financial assistance in the establishment of programs of resource adjustment and development; and provincial governments have moved significantly to accommodate their administrative structures to the need for integrated, planned resource adjustment and development. Aspects of this trend to accommodate legislative-administrative organization to emerging needs will be apparent in the following descriptions of federal and federal-provincial agencies and programs. In addition, a great number of provincial programs have been instituted or strengthened, furthering the trend toward integration of activities relative to renewable natural resources.

Federal activity in resource conservation programs began before the turn of the century, starting in 1877. This included the work of the now long-disbanded Department of the Interior in the field of surveying and development of water resources in Western Canada. Later programs included those conducted under the Prairie Farm Rehabilitation Act which was enacted in 1935 to aid in the rehabilitation of drought-stricken areas of the prairies, the work on the eastern seaboard conducted under the Maritime Marshland Rehabilitation Act of 1948, water development projects under the terms of the Canada Water Conservation Assistance Act of 1953, the broad and comprehensive resource development and adjustment programs being undertaken under the terms of the Agricultural and Rural Development Act of 1966 (formerly Agricultural Rehabilitation and Development Act of 1961), and the Fund for Rural Economic Development Act, 1966, and projects under the Atlantic Development Board Act of 1962. There have been numerous programs under the International Boundary Waters Treaty Act of 1911 by the International Joint Commission established to fulfil the provisions of the treaty and the confirming Act. Over this period many projects of varying nature and scope have been undertaken under legislation such as the above and under the terms of reference of the federal and provincial government departments and agencies concerned with resource development—all toward the basic objective of achieving more effective utilization of Canada's land and water resources and the provision of a greater degree of economic stability and equitability for the rural areas of the country.

Section 1.—Land Resources

Information available regarding Canada's land resources is shown in Table 1, where the land area is classified as occupied agricultural, forest and "other" land, the last including urban land, road allowances, grass and brush land and all waste land such as open muskeg, swamp and rock. The Department of Forestry and Rural Development estimates that about 48 p.c. of the land area of Canada is forested and, according to the Census of 1966, less than 8 p.c. is classed as occupied farm land. A great part of the 1,599,542 sq. miles of "other" land is located in the Yukon and Northwest Territories which together have a land area of 1,458,784 sq. miles. The occupied farm land in these Territories is practically nil and the forest area is estimated at 275,800 sq. miles.

On the basis of information currently available, it is estimated that, in addition to the present arable land across the country, about 40,000,000 acres of virgin land can be used for arable crops if the need arises. However, most of these reserves will require clearing or other improvement measures before they can be used for agriculture. In addition to the present arable land and potentially arable land, 55,000,000 to 60,000,000 acres are suitable for wild pasture.

As the Canada Land Inventory progresses (see p. 471), a great deal of detailed information is becoming available on the land resources of the country, their present utilization and their capability.

Roundup on a Saskatchewan community pasture. In 1967 more than 7,000 farmers placed 160,000 cattle for summer grazing on community pastures operated by the Prairie Farm Rehabilitation Administration. The total area of the 87 pastures established on land submarginal for crop-raising is about 2,500,000 acres and about 500 riders are required for roundups.

1.—Land Area classified as Occupied Agricultural or Forest, by Province

NOTE.—Figures for occupied agricultural land were obtained from the 1966 Census; areas of forest land were compiled by the Department of Forestry and Rural Development from estimates supplied by the Forestry Service in each province.

¹ Included in *Forest Land*; duplication eliminated in the item *Net Productive Land*.

² Includes areas of recent burn, cut-over or windfall not yet re-stocked. Areas incapable of producing crops of merchantable timber because of adverse climatic, soil or moisture conditions, and reserve forest lands for which no inventories are available.

³ Includes only occupied agricultural land (less forest, woodland) plus productive forest land.

⁴ Includes grass and brush land and all waste land such as open pasture, swamp and rock and also unclassified land.

⁵ *Net Productive Land* plus *Non-productive Forest Land* plus *Other Land*.

Section 2.—Federal Agencies Concerned With Resource Use

Numerous agencies of the Federal Government have a more or less direct concern with renewable resources. Functions vary from academic research to direct manipulation of resources in certain geographical areas. Direct action, however, is limited mainly to areas under federal jurisdiction—the Northwest Territories, Indian reservations, limited federal forest preserves, National Parks, certain international parks and waterways, certain aspects of fisheries, matters relative to public health, navigation, and certain aspects of agriculture. More usual by far than direct action by the Federal Government are federal-provincial agreements under which the Federal Government shares the costs of programs. Such aid is often conditional on the province agreeing to carry out the program in accordance with criteria established by the Federal Government. The capacity of the Federal Government to establish cost-sharing programs is inherent in its broad fiscal powers and in its research and data-gathering programs that provide a basis for broader assessment of issues and alternatives.

Federal agencies whose activities impinge fairly directly on renewable resource development and use are as follows:—

- CANADA DEPARTMENT OF AGRICULTURE—Research Branch, Economics Branch, Prairie Farm Rehabilitation Administration, and Information Division
- DEPARTMENT OF FISHERIES—Conservation and Protection Service, Resource Development Service, Information and Consumer Service, and Economics Service
- DEPARTMENT OF FORESTRY AND RURAL DEVELOPMENT—Directorate of Program Co-ordination, Information and Technical Services Division, Forest Products Research Laboratory, ARDA Administration, Maritime Marshlands Rehabilitation Administration, and Eastern Rockies Forest Conservation Board
- DEPARTMENT OF INDIAN AFFAIRS AND NORTHERN DEVELOPMENT—Council of the Northwest Territories, Natural and Historic Resources Branch (including the Canadian Wildlife Service), Northern Administration Branch, and Indian Affairs Branch
- DEPARTMENT OF PUBLIC WORKS—Harbours and Rivers Engineering Branch, Development Engineering Branch and Economics Studies Branch
- DEPARTMENT OF TRANSPORT—Marine Works Branch, Marine Hydraulics Branch, and Meteorological Branch
- DEPARTMENT OF NATIONAL HEALTH AND WELFARE—Occupational Health Division, and Public Health Engineering Division
- DEPARTMENT OF FINANCE—Economic Analysis and Government Finance Division, Resources and Development Division, and a Division concerned with Taxation, Federal-Provincial Relations and Pensions and Social Insurance
- DEPARTMENT OF VETERANS AFFAIRS—Veterans' Land Administration
- DEPARTMENT OF ENERGY, MINES AND RESOURCES—Four Departmental Sectors are concerned with mines and geosciences, mineral development, energy development, and water, including the Geological Survey of Canada, Surveys and Mapping Branch, Marine Sciences Branch, Inland Waters Branch, and Policy and Planning Branch
- NATIONAL RESEARCH COUNCIL OF CANADA
- NATIONAL ENERGY BOARD
- ECONOMIC COUNCIL OF CANADA
- ATLANTIC DEVELOPMENT BOARD.

Various Crown corporations, credit agencies, advisory committees and boards, and quasi-governmental organizations also have interests in the fields of resource development, including:—

- FARM CREDIT CORPORATION
- CANADIAN COMMITTEE ON FRESHWATER FISHERIES RESEARCH
- FISHERIES RESEARCH BOARD OF CANADA
- NORTHERN CANADA POWER COMMISSION
- ADVISORY COMMITTEE ON NORTHERN DEVELOPMENT
- ADVISORY COMMITTEE ON WATER USE POLICY
- CENTRAL MORTGAGE AND HOUSING CORPORATION
- NATIONAL HARBOURS BOARD
- ST. LAWRENCE SEAWAY AUTHORITY
- ATLANTIC DEVELOPMENT BOARD
- NORTHERN TRANSPORTATION COMPANY

INTERDEPARTMENTAL ADVISORY COMMITTEE ON FORESTRY STATISTICS
 INTERDEPARTMENTAL CO-ORDINATING COMMITTEE FOR ARDA
 CANADIAN COUNCIL ON RURAL DEVELOPMENT
 INTERDEPARTMENTAL COMMITTEE ON RESOURCES
 NATIONAL COMMITTEE FOR THE INTERNATIONAL HYDROLOGIC DECADE.

The Dominion Bureau of Statistics has, of course, functions relevant to nearly all aspects of the national life, including resources. The above agencies are not identified with a particular department and function more or less autonomously but are usually associated with a Minister of the Crown for purposes of reporting to Parliament (see pp. 140-142). Although each of these agencies carries out programs bearing on the use and development of natural resources, direct unilateral action is unusual except relative to lands and waters under the jurisdiction of the Federal Government. Major exceptions are the Prairie Farm Rehabilitation Administration programs and significant federal programs for the conservation and development of the various fisheries resources.

Major items of federal legislation relative to renewable resources include:—

The Department of Agriculture Act
 The Prairie Farm Rehabilitation Act
 The Farm Credit Act
 The Department of Fisheries Act
 The Forestry Development and Research Act
 The Agricultural and Rural Development Act
 The Fund for Rural Economic Development Act
 The National Parks Act
 The Migratory Birds Convention Act
 The International River Improvements Act
 The Dominion Water Power Act
 The Canada Water Conservation Assistance Act
 The Atlantic Provinces Power Development Act
 The Navigable Waters Protection Act
 The Veterans' Land Act
 The Economic Council of Canada Act
 The National Energy Board Act
 The National Harbours Board Act
 The St. Lawrence Seaway Authority Act
 The Resources and Technical Surveys Act.

Section 3.—International Boards and Commissions

The continental context of Canadian resource management is implicit in the purposes of the various international boards and commissions in which Canada participates. Of the 35 or more, some 25 are concerned with water; most of the remainder have to do with fisheries.

THE INTERNATIONAL JOINT COMMISSION was established to fulfil the provisions of the International Boundary Waters Treaty of 1909 between the United States, Great Britain and Canada. Three commissioners were appointed by the President of the United States and three by the Government of Canada. The Commission deals with the use, obstruction and diversion of boundary waters and rivers crossing the International Boundary. It conducts investigations on water use problems with international implications and reports its findings with recommendations to both governments.

International boards of control which report to the International Joint Commission are: a ten-member International St. Lawrence Board of Control, concerned with levels of Lake Ontario and the regulation of outflow from the lake; a two-member St. Croix Board, concerned with water levels and supervision of dam construction; the Lake of the Woods Board, the Lake Superior Board, the Rainy Lake Board and the Kootenay Board, all of which are concerned with water levels; a two-member Columbia River Board, concerned with the effects of the Grand Coulee dam; a four-member Souris River Board, concerned with allocation of water; and a five-member Niagara Board, concerned with levels of

Grass Island Pool and the Lake Erie ice boom. Functions similar to those of the Boards are carried out by two accredited officers relative to measurement and apportionment of waters of the St. Mary and Milk Rivers. Also reporting to the International Joint Commission are five international engineering boards for the St. John, St. Croix, Souris and Red, Pembina and Columbia Rivers. A seven-member Technical Advisory Board on Air Pollution is concerned with air pollution by ships plying the Detroit River. An Advisory Board on Control of Pollution of Boundary Waters, reporting to the International Joint Commission, is concerned with the connecting channels of the Great Lakes, and other boards concerned with pollution are: the Advisory Board on Pollution Control-St. Croix River, the International Red River Pollution Board, the International Lake Erie Water Pollution Board and the International Lake Ontario-St. Lawrence Water Pollution Board. The eight-member International Great Lakes Levels Board is concerned with investigation and study of water levels of international or boundary waters, reporting to the International Joint Commission.

THE INTERNATIONAL NORTH PACIFIC FISHERIES COMMISSION, composed of four members each from Canada, the United States and Japan, operates to fulfil the terms of the International Convention for the High Seas Fisheries of the North Pacific Ocean, the objective of which is to achieve maximum sustained yield in non-territorial waters by co-ordination of the studies necessary to determine appropriate application of treaty principles. THE GREAT LAKES FISHERIES COMMISSION, composed of two national sections of three members each, formulates and co-ordinates research programs and recommends programs for the eradication or control of sea lamprey populations. Responsibility for Canada's treaty obligations is shared by arrangement between the Federal Government and the Government of Ontario. THE NORTHWEST ATLANTIC FISHERIES COMMISSION operates under the International Convention for the Northwest Atlantic Fisheries signed by Canada, the United States, the United Kingdom, France, Spain, Denmark, Portugal, Iceland, Norway, Italy, East Germany and the U.S.S.R. All contracting governments are represented on the Commission and panels have been established with jurisdiction over defined areas of particular interest to some signatories. The Commission has no regulatory powers but conducts scientific investigations and recommends measures to maintain stocks of fish. THE NORTH PACIFIC FUR SEALS COMMISSION operates under the Interim Convention on Conservation of North Pacific Fur Seals signed by Canada, the United States, Japan and the U.S.S.R., undertaking research, recommending enforcement measures required to eliminate pelagic sealing on the high seas, and overseeing the apportionment of skins from the Pribilof, Commander and Robben Islands. THE INTERNATIONAL WHALING COMMISSION, composed of representatives of Australia, Brazil, Argentina, France, South Africa, the United States, the United Kingdom, Canada, Norway, New Zealand, Iceland, Japan, Panama, Mexico and Denmark, has power to amend whaling rules and regulations of the International Convention, and to recommend new regulations with respect to the conservation and use of the resource. THE ROOSEVELT-CAMPOBELLO INTERNATIONAL PARK COMMISSION is concerned with the administration and development of the Campobello Island estate of the late Franklin D. Roosevelt as an international park.

Section 4.—Federal and Federal-Provincial Resource Development Programs

Water Development

Since 1935, the Prairie Farm Rehabilitation Administration (PFRA) has provided engineering and financial assistance in respect of some 91,000 small dams and dugouts (small artificial ponds for water collection) to supply water for livestock, irrigation and domestic use. In the main, such works serve individual farmers but some serve groups of farmers or communities. At the request of the provincial or local governments, the PFRA will provide free engineering service for the investigation of potential water development projects.

Six minor irrigation projects in Saskatchewan provide water for 125,000 acres of land. Major irrigation projects include the St. Mary Irrigation Project, jointly undertaken by the Federal Government and the Government of Alberta in 1946. The St. Mary Dam, completed in 1951, impounds water from the Belly and Waterton Rivers, providing sufficient water to irrigate approximately half a million acres. The South Saskatchewan River Development Project, completed in the late summer of 1967, involved building of a main dam 210 feet high and 16,700 feet long—the largest rolled earth dam in Canada and one of the largest in the world. Located between the towns of Outlook and Elbow, this dam will create a reservoir 140 miles long with a capacity, when filled, of 8,000,000 acre feet of water (usable storage of 2,700,000 acre feet). The project will provide water to irrigate 500,000 acres of land, the power potential is 475,000 kilowatts, and the artificial lake will have considerable recreational potential. A second, smaller dam adjacent to the height of land between the South Saskatchewan and Qu'Appelle Rivers will divert water into the Qu'Appelle-Assiniboine system to provide much-needed water supplies for irrigation and the considerable urban areas of the watershed. The cost of developing the main reservoir was \$117,000,000, of which the provincial government contributed \$25,000,000.

Land reclamation projects have been carried out by the PFRA in Manitoba along the Saskatchewan and Pasquia Rivers near The Pas, the Assiniboine River between Portage la Prairie and Headingly, at various points in the Interlake Region, and along the Northwest Escarpment. The Assiniboine River project includes creation of a large reservoir near Shellmouth and construction of a diversion canal near Portage la Prairie to carry floodwaters to Lake Manitoba. Construction of the main dam began in 1964.

Smaller irrigation and water-supply projects assisted by PFRA number better than 14,800; most of them serve individual farmers but a number serve adjacent farms or small communities and many of them provide substantial water supplies for various uses. Since the inception of the program, some \$19,700,000 has been spent by PFRA on such projects.

Under the provisions of the Atlantic Development Board Act of 1962, amended in 1963 and 1966, a \$150,000,000 Atlantic Development Fund was established to support projects which would contribute to the growth and development of the economy of the Atlantic region. The Act also required the Board, in consultation with the Economic Council of Canada, to prepare an over-all co-ordinated plan for the promotion of the economic growth of the region. Among the projects initiated during the Board's first four years of operation were a number relative to water use for power production and for industry, the most notable being a \$20,000,000 grant toward the \$120,000,000, 600,000-kilowatt Mactaquac dam in New Brunswick and a similar grant toward Newfoundland's \$88,000,000, 225,000-kilowatt (first stage) Bay d'Espoir hydro-electric project. The Board also assisted in developing water supplies to meet the needs of industries—mainly fish-processing plants—in some 35 communities, and committed \$2,000,000 toward abatement of industrial pollution in inland waters of the region. As part of its planning activities, the Board engaged consultants to carry out a \$1,500,000 study on the supplies of water in the region and the demands that are likely to be made upon them up to 1981 and beyond. To Mar. 31, 1967, the Board had committed from the Atlantic Development Fund \$99,000,000, of which \$55,000,000 had been spent.*

The program under the Agricultural Rehabilitation and Development Act (ARDA) (see p. 471) included, during the first three years of the program to Mar. 31, 1965, some 207 soil and water conservation projects for which the Federal Government shared the costs to the extent of \$12,300,682.

Under the Canada Water Conservation Assistance Act of 1953, which enables federal participation up to 37½ p.c. of the cost of dams and other major water projects, six water control programs—the Halton Region, Metropolitan Toronto Region, and the Upper Thames River conservation programs in Ontario, and the Alberni, North and West Van-

* The functions of the Board and its operations are dealt with in greater detail in Chapter XXIV, Sect. 6, Subsect. 2.

couver, and Hastings Creek flood control in British Columbia—are being assisted. The over-all cost of these programs is estimated at \$39,500,000, of which the Federal Government is committed to \$14,800,000.

Other federal and federal-provincial programs and agencies concerned with water are: the Greater Winnipeg Floodway program, to construct a floodway past Winnipeg at a total estimated cost of \$63,000,000, of which the Federal Government will contribute about \$37,000,000; the Prairie Provinces Water Board, to recommend an allocation of water from interprovincial streams; the Saskatchewan-Nelson Basin Board, to study the water resources of the Saskatchewan-Nelson Rivers basin including potential additional supply by diversion or storage; the Atlantic Tidal Power Programming Board, to carry out studies for the development of the power potential of the tides of the Bay of Fundy; a co-ordinated study of Ontario rivers flowing into James Bay and Hudson Bay, to assess the quantity, quality, and present and future requirements for these waters, and to suggest alternative possibilities for their use; and a considerable number of varied hydrologic and water quality studies conducted by the Department of Fisheries, the Canada Department of Agriculture, the Department of National Health and Welfare, the National Research Council, the Department of Transport, the Department of Energy, Mines and Resources, the Department of Forestry and Rural Development, and several other agencies.

Lands, Forests and Wildlife

The Prairie Farm Rehabilitation Act of 1935 provided for rehabilitation of areas subject to drought and wind erosion in the Prairie Provinces and in 1937 was amended to broaden its scope to include land utilization and resettlement. In the main, the PFRA's land-use programs have involved the establishment of community pastures on land sub-marginal for cereal crop production, and over the years this program has resulted in the establishment of 87 operating community pastures, with five more under construction, totalling 2,500,000 acres, at a total cost of \$10,000,000. The PFRA operates a tree nursery at Indian Head in Saskatchewan, which distributed free more than 10,225,000 trees to farmers for farm and field shelterbelts during 1966-67. In that year, 1,966 miles of field shelterbelts were planted.

The Agricultural Rehabilitation and Development Act, proclaimed in 1961, arose out of recognition of a national interest in achieving better land use, improving the viability of farm units at present uneconomic, and of improving employment and income opportunities in rural areas. In many areas of Canada, income is unacceptably low and land use faulty or inefficient. To some considerable degree these economic, social and conservation problems have been caused by farm mechanization which places smaller, less-mechanized farmers at a disadvantage; a notable symptom of this is the decrease in the number of farms in Canada from about three quarters of a million in 1931 to less than half a million (431,000 in 1966).

The Act, amended in 1966 as the Agricultural and Rural Development Act and supplemented by the Fund for Rural Development Act of 1966, is enabling legislation intended to be complementary and supplementary to existing federal and provincial legislation in respect of renewable resources and rural social and economic development; to aid in correlation and expansion of existing programs; and to fill gaps. As such, it has considerable potential as an instrument for programs of alternate land use, soil and water conservation, development of rural income and employment opportunities, and for research. ARDA is a federal-provincial program which operated from its inception to Mar. 31, 1965 under a federal-provincial General Agreement, and after that time under the Federal-Provincial Rural Development Agreement covering the period 1965-70. Under the General Agreement, ARDA approved projects involving a federal share totalling \$34,517,000 of which \$13,484,000 was expended during the period. The federal share is usually in the order of 50 p.c. of total cost. The Federal-Provincial Rural Development Agreement 1965-70 provides for the expenditure of \$125,000,000 during that period. In addition, \$300,000,000

is provided under the Fund for Rural Economic Development Act to finance major projects in special rural development areas. During 1966-67, the Federal Government committed ARDA funds to the extent of \$39,429,000, covering 371 projects.

The Canada Land Inventory being co-ordinated by the ARDA Administration has been made possible by extensive soil classification work in Canada over the past half-century. The co-operative Soil Surveys, which have been under way since 1935, are staffed by soil specialists of federal and provincial governments and universities and are supported by all senior governments. The Soil Surveys have mapped most of the agricultural land of Canada, classifying soils according to their inherent characteristics. The Department of Energy, Mines and Resources has conducted a second type of land classification according to present use, and various agencies, both federal and provincial, have provided information on the social and economic factors of land use. The Canada Land Inventory carries out a third type of land classification—according to its assessed capability for different uses, i.e., agriculture, forestry, recreation and wildlife, in and adjacent to the settled portions of Canada. Lands are being classified according to physical capability, present use, and socio-economic factors relative to their present use. The vast amount of information obtained will be stored on computer tapes, analysed and published in map or other form in such a way that the Inventory will become a working tool in resource planning and rural development programs throughout Canada. Approximately 100 agencies of the 11 senior governments are involved in the Inventory, as well as numerous universities, non-government organizations and private companies or individuals. By late 1967, the agriculture and present land use phases of the Inventory had been nearly completed and substantial progress had been achieved in the forestry, wildlife and recreation phases. Capability maps at a scale of 1:250,000 may be obtained from the Queen's Printer as they become available.

In addition, other federal agencies and federal and federal-provincial programs are concerned with land and land-based resources. The Department of Indian Affairs and Northern Development engages in such diverse activities as the administration of National Parks, the administration of the resources of the Yukon and Northwest Territories and the administration of wildlife, including a considerable research program relative to wildlife and the administration of the Migratory Birds Convention Act. Among the programs are the Wildlife Inventory Program in which joint studies are carried out informally, e.g., the waterfowl inventory conducted by the Federal Government, the United States Fish and Wildlife Service, Newfoundland and the five westernmost provinces; the caribou inventory by the Federal Government and the Governments of Alberta, Saskatchewan, Manitoba, Quebec and Newfoundland; the Trans-Canada Highway Compounds and Picnic Areas Program established in 1958 without Ontario and Quebec; a significant program of acquisition of wetlands waterfowl habitat areas; and Fur Conservation Agreements between the Federal Government and Ontario, Manitoba and Saskatchewan for the construction of water control works, mainly to improve muskrat and migratory bird habitat. The Roads to Resources program, carried out under agreements with the provinces made between 1958 and 1960, is a substantial federal-provincial program involving construction of access roads in Canada's "pioneer fringe". The Department of Forestry and Rural Development administers the Composite Forest Agreements which involve an annual allotment by the Federal Government of \$7,910,000 for purposes of inventory, fire protection, access roads and trails, and forest stand improvement. Forest products research, a joint federal-provincial-industry program of spraying to control budworm infestation of spruce forests in New Brunswick, and various other programs of research and forest stand improvement are in effect.

Notwithstanding the magnitude of these federal and federal-provincial programs, and the large number of federal agencies concerned with resource use and development in Canada, it should be noted that the provincial governments assume a role which, in total, is many times larger than that of the Federal Government.

Section 1.—Agricultural Trends and Highlights in 1966 and 1967

Agriculture has been and continues to be a most important part of the Canadian economy. Farm cash receipts for agricultural production in 1966 reached a total of \$4,273,575,000 but this value of primary farm production gives only a partial view of the importance of the industry. To this must be added the processing, the transportation and the myriad other allied groups that are involved in the movement and transformation of the raw product of the farm into food for Canada and for the world. Despite the fact that only about 10 p.c. of the present Canadian work force is engaged in agricultural pursuits, compared with about 25 p.c. in the mid-1940s, agricultural production has, in the same period, increased by about 40 p.c. The primary producer, the farmer, has become more efficient, producing more food with less help, and the processing industry has paralleled that increase in efficiency.

It may be said that the dominant trends in Canadian agriculture since the end of World War II have been the marked reduction in the number of farms and in the farm labour force, accompanied by increases in capital investment, in specialization, in mechanization and in output. These trends have not yet run their course so that adjustment is constantly taking place in the structural organization of agriculture at the farm level. In addition, important developments have occurred in the marketing, processing and handling of farm products and in the response of industry to serve agriculture with the necessary machinery and production supplies.

Although a great many farms have been transformed into modern, efficiently operated units, there are still large numbers that have not made this adjustment. The returns from agricultural output on these old-type farms are small and their operators often find it necessary to seek part-time employment in off-farm activities. Even on farms where adjustments have been made to larger acreages or more capital input, there is a great disparity in revenue between the smaller and larger farms. Increased productivity for

the group as a whole barely meets the increased costs of modern farming. Prices of farm products generally have not risen as fast as the costs of the goods and services that farmers purchase. The impetus on the part of farmers is to continue to increase efficiency and to exert as much influence as possible in effecting higher returns for their products.

Farmer groups have entered extensively into the marketing and processing of farm products, through the formation of either co-operatives or marketing boards. Aided by government legislation, producer marketing boards have been established for many products with the avowed purpose of stabilizing prices. Direct government aids are also available through price stabilization, crop insurance and farm credit policies. Thus, the role of governments and of farmer-controlled companies in the marketing of farm products is expanding year by year. On the other hand, private industry still holds and likely will continue to hold an important place in the processing and marketing field. Geographical shifts in production have required the construction of new plants, especially for livestock slaughter, and in recent years a number of new plants have been built for the processing of fruit and vegetable crops. Progressive trends in agriculture have also had the effect of increasing demand for many industrially produced commodities and services such as machinery, electricity, fertilizers, antibiotics, pesticides and so on.

Although improvements in farm practices have certainly resulted in greater agricultural productivity in recent years and will continue to do so, it must not be forgotten that weather is still a dominant factor in agricultural output and can cause considerable variation from year to year in the over-all farming picture or in the output of certain localities or of certain crops. In 1966 the weather was particularly favourable for crop production with the result that the index of field crop output (1949=100) rose to 204.1, the highest level ever reached. In 1967, on the other hand, crop production was hampered by the lack of rainfall and, as a consequence, over-all agricultural production declined from 10 p.c. to 15 p.c.

Agricultural Highlights in 1966 and 1967

Agriculture experienced an impressive year in 1966. On the marketing front, strong external demand for Canadian wheat spurred farmers to plant a record acreage and, assisted by excellent growing conditions, to produce 827,000,000 bu., the largest crop ever harvested in Canada. On the income front, another record was reached when farm cash receipts passed the \$4,000,000,000-mark for the first time. On the legislative front, the establishment of the Canadian Dairy Commission and amendments to the Crop Insurance Act were important milestones in agricultural history.

Much attention was focused on the dairy industry during the year. In March, a new federal dairy policy was announced, aimed at raising producer income, stabilizing the industry, and protecting consumers against runaway prices. It provided farmers with an average return of \$4.00 per cwt. for manufacturing milk at the plant, as against the \$3.50 figure of the previous year. Later in the year the selling price of butter was increased by two cents and the average return for manufacturing milk reached \$4.08.

Also in March, Canada's sheep producers received notice of a 16.3-cents-per-lb. deficiency payment for wool, and 24,000 of them received payments from the federal treasury totalling \$655,000. A new price support program for eggs was brought in; reflecting the trend toward larger laying flocks, the program provided price support for a larger number of eggs marketed by the producer.

In April, in the field of research, announcement was made of the discovery and development of a new broad-spectrum antibiotic by a team of Canada Department of Agriculture (CDA) scientists. The new antibiotic, called *Myxin*, promises to be a major weapon against disease and has been hailed as a major scientific breakthrough.

In May, a program that takes its place as a 'first' in agricultural circles—the importation of cattle from Europe—was climaxed when 109 Charolais were released from CDA's maximum security quarantine station on Grosse Île, Que. These were the first cattle to come to Canada from France in this century. Late in the month, the Head of the

University of Manitoba's Economic Department was appointed a one-man commission (Barber Commission) to inquire into the dilemma of rising costs of farm machinery and repair parts.

Canada's international relations in the field of agriculture were strengthened by the visits of Canadian agricultural officials to Britain, France and Yugoslavia and, later, of a four-man Yugoslavian agriculture and trade mission to Canada.

In July, an amendment to the Crop Insurance Act received Royal Assent, broadening the scope of the Act to offer farmers from coast to coast greater protection against the vagaries of weather. The new provisions include: insurance up to 80 p.c. of the average yield of a crop; protection against loss of production units such as fruit trees or perennial forage stands; compensation for the cost of summerfallowing when natural causes prevent seeding the following year; and an increase in the federal contribution to the total premium. (See also pp. 482-483.)

In late July, the Minister of Agriculture visited Argentina on invitation of the Argentine Rural Society. During the visit, he and his counterpart in that country reached a common position favouring an increase in world wheat prices to cover rising costs of production.

In September, an important milestone was reached in Canada's determined fight against animal disease. On a farm near Montmagny, Que., the Minister of Agriculture turned veterinarian briefly to take a blood sample from a cow to mark completion of the initial testing of the nation's cattle herds for brucellosis. Now only the Scandinavian countries exceed Canada in freedom from that disease. In another problem area, announcement was made of the payment of compensation to livestock owners for losses suffered through the disease anthrax.

In October, the Act establishing the Canadian Dairy Commission was proclaimed. Apart from the Canadian Wheat Board, it marks the first entry of the Federal Government into a national marketing agency for agricultural products. The Commission is responsible for stabilizing the price of manufacturing milk and cream to provide efficient producers with a fair return for their milk and to assure consumers of an adequate supply of dairy products. It administers federal support funds and determines a basis of payments for the benefit of milk and cream producers. (See also p. 482.)

Also in October, Canada's Minister of Agriculture was elected vice-chairman of the meeting of Ministers of Agriculture of member countries of the UN Organization for Economic Co-operation and Development (OECD) held in Paris. The meeting reviewed the agricultural policies and goals of member countries and their relation to international trade and the needs of developing countries.

On Dec. 2, the Agricultural Stabilization Board announced a deficiency payment of \$6.38 per standard ton of sugar beets marketed by growers during the 1965 crop year. A few days later, the Board also announced an interim deficiency payment of \$3.00 per ton on the 1966 sugar beet crop.

Significant for grain growers was the announcement in December of two new oat varieties, Sioux and Kelsey. These varieties have considerable resistance to disease and are higher yielding than standard varieties.

During 1967, the Centennial Year, there were many remarkable developments in Canadian agriculture, including the implementation of the new dairy policy, the successful conclusion of the Kennedy Round with its promise of reduced tariffs for many agricultural products and items of interest to farmers, changes in the anti-dumping code, the conclusion of an International Wheat Arrangement, and the formation of a task force to study Canada's agricultural future. In the production field, Canadian farmers sold products estimated to bring their cash receipts to a new high of \$4,400,000,000. Net income, however, which includes inventory changes, fell below that of 1966.

Domestically, one of the more profound events was the policy announced by the newly founded Canadian Dairy Commission (CDC). The Government subsidy was

raised from \$90,000,000 for the dairy year 1966-67 to \$120,000,000 for 1967-68, which meant an increase from 85 cents to \$1.21 to be paid directly to the dairy farmer for every 100 lb. of 3.5-p.c. butterfat milk sold for processing, less a holdback of 11 cents toward the cost of exporting surpluses, if any. The Government also offered to buy butter at 63 cents, skim milk powder at 20 cents and cheddar cheese at 38 cents per lb. (plus export aid) to make it possible for the dairy plants to pay the producer \$3.50 or thereabouts. For the first time, however, the subsidy was to be based on quota production. For the time being, the 1966-67 milk production was taken as sufficient for current market needs and producers were notified that they would be paid a subsidy in 1967-68 only on an amount equal to that which they had marketed for processing in 1966-67. The CDC made allowances for individual exceptional circumstances but indicated that it would work also toward raising the minimum amounts eligible for assistance. Dairying was in the news all year. Many farm organization meetings were held during the spring and, in October, CDA officials met with representatives of all sectors of the industry to discuss its problems. Finally, in mid-December, a conference attended by representatives of farm organizations, processors, provincial governments and the Federal Government reached general agreement on a policy to meet the difficulties facing the industry.

CDA's project of making new blood lines available to cattle breeders was continued in 1967. In April, an additional 214 head of Charolais, imported from France and held in quarantine at Grosse Île, Que., were released to buyers and, in the fall, the importation of a further 236 head was authorized. Measures were taken to ensure that full-blooded Charolais would remain in the country to carry out the purpose for which the program was initiated, rather than be sold abroad immediately.

Support for egg producers was increased by making the 34-cents-per-doz. federal buying price applicable to all amounts of eggs between 1,000 doz. and 10,000 doz. marketed by eligible producers. In July, the Government stepped in to buy surplus eggs which were converted into egg powder and donated to the World Food Program. The price improved and, since the national average for Grade A Large for the crop year was 36.7 cents per doz., no deficiency payment was necessary. A joint federal-provincial program was also put into effect to assist producers' returns from potatoes when it was evident that production was far in excess of normal market requirements. Potatoes were diverted to starch plants and to cattle feed at government cost. Support for the 1967 sugar beet crop was set at a national level of \$15.50 per standard ton (250 lb. of sugar) delivered to processing plants, and an interim deficit payment was subsequently made. The federal action encouraged Ontario growers to maintain the acreage stipulated by processors as the minimum they would need to operate in 1967 and it also protected producers from serious fluctuations in the world price. A deficiency payment of 18.3 cents per lb. on wool was made in March. In the fall, the Government moved to control below-cost movement of imported live turkeys.

In 1967, Ontario and British Columbia entered the federal-provincial insurance scheme under the Crop Insurance Act and it was estimated that, including those from other participating provinces, 33,000 farmers received \$90,000,000 worth of crop protection in the year. More flexibility was brought to Farm Credit Corporation mortgages by allowing suspension of repayments under special circumstances. Such suspension might be for as long as five years on a 30-year loan.

CDA officials gave strong support to "Man the Provider", the agriculture theme pavilion at Expo 67 held at Montreal from April to October. The Minister of Agriculture formally opened the pavilion, presented certificates to those who had helped establish it, and entertained visiting agricultural ministers from foreign countries. The Department's plant and meat inspection staffs had important roles in keeping out banned material with minimum interference in the operation of the numerous foreign exhibits.

The Minister of Agriculture was Canada's delegate to the UN Food and Agriculture Organization Conference held in Rome in November. He urged that the organization be streamlined for effective action against world hunger and that private enterprise contribute management skills and capital to the important programs involved.

It was announced that CDA will pay municipal grants equivalent to the full taxes for six government grain elevators in 1968; the Department has been paying grants since 1961 but only at the level of 50 p.c. of tax equivalent, under the Municipal Grants Act formula.

The opening of the South Saskatchewan River dam in the summer of 1967 marked the successful conclusion of seven years of construction supervision by the CDA's Prairie Farm Rehabilitation Administration engineers. The \$100,000,000 storage, irrigation and power project were named Gardiner Dam and Diefenbaker Lake. A \$200,000 dam was authorized for the Esterhazy area of Saskatchewan where there are many farms and where a large phosphate mine is giving jobs to residents and newcomers. The 12-man team from PFRA, which went to Ghana two years ago to help with the exploitation of that country's water resources and to train staff, is continuing its work there.

During the year, the Barber Commission continued its investigation of the agricultural machinery industry. In the fall, a task force was named by the Minister of Agriculture to project national agricultural goals and to recommend policies. Comprising economists, a business management expert and an accountant, the five-man group held several meetings before the end of the year. In late November a dozen veterinarians of the CDA's Health of Animals Branch were sent to assist in fighting a severe outbreak of foot and mouth disease in Britain.

The value of applying the results of research was made very evident in 1967 when, despite unfavourable weather, spring wheat yield per acre of 19.4 bu. was only 3 p.c. below the ten-year (1956-65) average. Improved varieties, pest control and fertilizer practices, moisture-conserving tillage methods and efficient harvesting all contributed to mitigate the adverse conditions. Each of the contributing factors was the result of years of research by the Department.

In March, the Department's Divisions, scattered in 18 locations in the city of Ottawa, moved into the new Sir John Carling Building on the grounds of the Central Experimental Farm. This became the headquarters of CDA, housing the Minister and Deputy Minister staffs, the Production and Marketing, Economics, Health of Animals, Financial and Administration, and Personnel Administration Branches and the Farm Credit Corporation. The positions of assistant deputy ministers for economics and for production and marketing were created and filled.

Section 2.—Federal Government in Relation to Agriculture*

The Canada Department of Agriculture dates from Confederation. It was established in 1867 as an outgrowth of a Bureau of Agriculture set up in 1852 by an Act of the Legislature of the Province of Canada. The Department derives its authority from the British North America Act, 1867, which states in part that "in each province, the legislature may make laws in relation to agriculture in the province" and that "the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the legislature of a province relative to agriculture, shall have effect in and for the province as long and as far as it is not repugnant to any Act of the Parliament of Canada".

A Department of Agriculture with a Minister of Agriculture at its head was accordingly established as part of the Government of Canada. Departments of Agriculture headed by provincial Ministers of Agriculture were also set up by the provincial governments, except in the Province of Newfoundland where agricultural affairs are dealt with by the Agricultural Division of the Department of Mines, Agriculture and Resources. The agricultural affairs of the Yukon and Northwest Territories are administered for the Federal Government by the Department of Indian Affairs and Northern Development.

* Prepared (July 1967) under the direction of S. B. Williams, Deputy Minister of Agriculture, Ottawa.

Subsection 1.—Services of the Canada Department of Agriculture

The activities of the Canada Department of Agriculture (CDA) fall into three broad groups: research, promotional and regulatory services, and assistance programs. Research work is aimed at the solution of practical farm problems through the application of fundamental scientific research to all aspects of soil management and crop and animal production. Promotional and regulatory services are directed toward the prevention or eradication of crop and livestock pests and the registration of chemicals and other materials used to achieve that end and toward the inspection and grading of agricultural products and the establishment of sound policies for crop and livestock improvement. Assistance programs cover some of the sphere of soil and water conservation, price stability, provision of credit, rural rehabilitation and development, and crop insurance and income security in the event of crop failure.

The Department has four main Branches—Research, Health of Animals, Economics, and Production and Marketing—and its organization includes a number of smaller units—the Agricultural Stabilization Board which is a departmental Crown corporation (see p. 481), the Agricultural Products Board, the Prairie Farm Rehabilitation Administration (p. 469), Crop Insurance (p. 482), the Information Division and Departmental Administration. Agencies closely allied with the Department and responsible to the Minister of Agriculture are the Farm Credit Corporation (p. 485), the Canadian Dairy Commission (p. 482) and the Board of Grain Commissioners (see Part II of Chapter XXI).

Research Branch.—The research activities of the Department are undertaken mainly by the Research Branch at some 55 centres across the country, although important contributions are also made by the Economics Branch (p. 480), the Health of Animals Branch (p. 479) and the Grain Research Laboratory operated by the Board of Grain Commissioners for Canada (p. 479). About 1,000 research workers are employed by the Department and their specialties run the gamut of scientific agriculture from genetics to engineering. Most of the research is directed from Research Branch executive headquarters at the Central Experimental Farm in Ottawa. Also located there are the statistical, engineering and analytical chemistry research services, together with six of the eight institutes for research on animals, food, entomology, cell biology, plants, soils, biological control and pesticides. Throughout the ten provinces there are 26 research stations, 13 experimental farms, a laboratory and a number of substations.

Originally, the main task of the experimental farms was to determine the potential of the various combinations of soil and climate for producing crops and maintaining livestock, and to develop and test varieties, breeds and management practices suitable for each area. Today's federal research program continues with this early work but is designed to meet the specific needs of domestic and export markets.

Canada's main crop for generations has been wheat, the efficient production of which stems directly from the help the grain growers have received from research. Without the new varieties produced by plant breeding, it would be unprofitable to grow wheat on large areas of the wheat belt. Comparable improvements in oats and barley have enabled the farmer to continue to grow these valuable cereals despite the incidence of pests and diseases, drought and short growing seasons. Research has also augmented livestock returns to farm incomes by developing better grasses and legumes adapted to the various regions of Canada that differ in climatic and soil conditions. Research in other crops, notably oil seed plants and potatoes, has resulted in new varieties with resistance to diseases, with improved quality and suitability for specific processing, and adapted to the different growing areas. More than 80 new varieties of crops have been developed and put into commercial production in the past ten years. Research into the storage and processing of crops has been accelerated and has led to valuable innovations in the fruit and vegetable industries and in the protection of stored grain.

In livestock, the main lines of progress are through genetics and nutrition and the main subjects are dairy and beef cattle, pigs, poultry and sheep. The advantages of

selective breeding have been evidenced through the records of animals tested for many years. The CDA developed a new breed of hog, the Lacombe, which is proving a worthy addition to the old-time breeds. Romnelet, a range-type sheep, was also an outcome of federal breeding programs. Crosses of several meat-type strains of chickens made at federal institutions have led to performance superior to that of pure strains. Extensive studies on the causes and control of diseases and parasites of livestock, fur bearing animals and wildlife are carried on with the result that epidemic outbreaks rarely occur and when they do are quickly suppressed. Live animals and meats must attain the high standards required in the export trade.

A matter of constant concern is the protection of crops from diseases and pests. Chemicals have proved to be potent weapons but there is also a continuing search for other control methods. Many weeds can be eradicated by proper tillage and cropping methods and a few have been controlled by insects that feed on them exclusively and destroy them. Fungus diseases may be checked by developing resistant varieties of crops. In biological control, parasites or predators are produced and released to prey on certain insects and eliminate them. Sterilization of male insects by radiation or chemical means is another method used to reduce insects of various kinds.

An area of special interest is that of farm mechanization in which there has been tremendous development in the past 60 years. The Research Branch is expanding its studies in this field at the Engineering Research Service in Ottawa and in the Maritime Provinces, and universities are being encouraged to study the subject more intensively.

Soil surveys are conducted in all provinces in co-operation with provincial departments of agriculture and the universities. Soils are examined and classified as to their chemical and physical characteristics and potential productivity. The resulting information is of inestimable value in setting up land uses under the ARDA program administered by the Department of Forestry and Rural Development (see pp. 470-471). Soil fertility is under study at many experimental farms and at research stations and is undertaken in close co-operation with the universities. Agrometeorology, a relatively new science, is opening new opportunities to growers to make the best use of the heat, light and moisture available in each farm area.

Although most agricultural research is carried out by the CDA, important programs are also undertaken by the provincial governments and agricultural colleges. Close liaison exists between these different agencies to avoid duplication and to ensure that the services offered by the Federal Government through provincial extension officers are of the kind needed by farmers. Federal research establishments across the country are represented on provincial committees concerned with field crop varieties, fertilizer practices, soil fertility, spray programs, field crop and animal management, and horticulture. Such collaboration ensures that new practices discovered by research are brought quickly to the attention of extension groups to recommend for local use.

The Grain Research Laboratory.—This Laboratory provides scientific services required in the administration of the Canada Grain Act. It carries out annual studies of the quality of the new crop cereals, maintains a continuous check of the quality of cereal grains as they move forward from the farm to marketing positions and plays a major role in testing (prior to licensing) the quality of plant breeders' varieties of various cereals. A comprehensive program of basic and applied research relating to the quality of Canadian cereal grains is an important task of the Laboratory.

Health of Animals Branch.—This Branch administers the Animal Contagious Diseases Act, the Meat Inspection Act and the Humane Slaughter of Food Animals Act, and operates laboratories for the study of animal diseases. Contagious diseases of animals are controlled through preventive measures of inspection and quarantine of imported livestock and restricted commodities such as meat, farm products and other possible sources of infection; through conducting disease eradication programs, notably of bovine tuberculosis, brucellosis and John's disease; through the control and eradication of serious

animal diseases when outbreaks occur; and through inspection and certification as to health of livestock for export. The Animal Pathology Division consists of the Animal Diseases Research Institute at Hull, Que., the Animal Diseases Research Institute (Western) at Lethbridge, Alta., and seven branch laboratories; these establishments conduct research and investigations on infectious diseases of animals and produce the biological products required in their control. The Division also provides diagnostic services for diseases of domestic and wild animals and conducts a training program for departmental officers and veterinarians from other lands. The Meat Inspection Division conducts ante-mortem and continuous post-mortem examination of animals slaughtered at packing plants that market their meat products outside of the province in which they operate, ensures maintenance of sanitary standards during processing of the products, accurate labelling and proper kind and use of ingredients and preservatives; it ensures also that, in these plants, the animals are slaughtered in a humane manner.

Economics Branch.—This Branch collects, analyses and interprets economic information needed to formulate and administer departmental programs and policies and does intelligence and research work designed to increase efficiency in agricultural production and marketing and to guide farmers in making needed adjustments in farm organization and operation. It acts as an economic and statistical research agency for the Agricultural Stabilization Board, the Prairie Farm Rehabilitation Administration and other bodies, and assists in any economic undertakings with which the Department is concerned. The Branch is also closely associated with the work of the Food and Agriculture Organization of the United Nations, the UN/FAO World Food Program, the General Agreement on Tariffs and Trade, and the Directorate of Agriculture of the Organization for Economic Co-operation and Development.

Production and Marketing Branch.—The Production and Marketing Branch conducts many of the promotional and regulatory functions of the Department. Six specialized divisions administer legislation and policies in the production and marketing of livestock, poultry, fruits and vegetables, dairy products and plant products, and policies in connection with the control of disease in plants. A General Service Division supplements and complements the specialized divisions in matters of common concern.

The *Livestock Division* administers legislation dealing with the grading of meat, wool and fur, with the registration of livestock pedigrees, with performance testing of cattle and hogs and with the supervision of racetrack betting. Other activities include the promotion of livestock improvement and the compilation of market statistics. The *Poultry Division* carries out the policies of the national poultry breeding program, including Record of Performance for poultry and hatchery inspection, and administers the regulations for the grading of poultry products. The *Fruit and Vegetable Division* administers legislation having to do with the grading of fruits and vegetables in both fresh and processed form, maple products and honey. The Division is responsible for the licensing of inter-provincial and international dealers and brokers who deal in fresh fruits and vegetables. The *Dairy Products Division* administers the Cheese Factory Improvement Act and legislation covering grades and standards for dairy products, including butter, cheese, concentrated milk products and ice cream. The *Plant Products Division* administers Acts and regulations respecting seeds, feedstuffs, fertilizers and pest-control products, conducts field inspections and maintains regional testing laboratories. The *Plant Protection Division* is responsible, under the Destructive Insect and Pest Act, for safeguarding against the introduction of serious plant insects or diseases into Canada or their spread in Canada, for certifying freedom from disease and pests in plant exports, and for seed potato certification.

The *General Service Division* maintains inspectors in the principal marketing areas to see that food products being sold by retail outlets meet prescribed standards of quality and grade; maintains inspectors at the main Canadian ports to check the handling of goods

moving to export markets; compiles and distributes market information; and co-operates with the commodity divisions in developing markets for Canadian foods and in interpreting the grading and inspection regulations to consumers.

Information Division and Departmental Administration.—The Information Division gathers and publishes information arising from research work and the development of regulatory programs of the Department. Publication is through the printed word, press and radio releases, motion pictures, television and exhibits. The general business management of the Department is undertaken by the Departmental Administration, the duties of which also embrace Emergency Measures Planning and the Departmental Library; the main emphasis of the Library's collection is, of course, on agriculture but extends also to the life sciences.

Subsection 2.—Farm Assistance Programs

Basic to the concept of Canada's national agricultural policy is the premise that a stable agriculture is in the interests of the national economy and that farmers as a group are entitled to a fair share of the national income. In pursuit of these objectives, the Department of Agriculture has carried on, over a long period, a program designed to aid agriculture through the application of scientific research and the encouragement of improved methods of production and marketing. Over the years, as conditions have warranted, programs have been initiated to deal with special situations such as the Prairie Farm Rehabilitation Act (see p. 469) to deal with the results of the drought in the 1930s; the Prairie Farm Assistance Act (p. 486) to mitigate the effects of crop failure; Feed Grain Assistance Regulations (p. 487) to assist in the movement of western feed grains to Eastern Canada and British Columbia; and the Maritime Marshland Rehabilitation Act (p. 464) to save valuable soil in the Maritime Provinces.

Although much has been accomplished and is still being accomplished by these measures, changes in the past two decades have dictated a new approach to some problems. Large-scale mechanization was the sequel to the reduction of manpower available to farmers; the number of farms declined but the size of farms increased; marketing and income problems took different forms. Legislation enacted to meet these situations include price support (Agricultural Stabilization Act), production and markets stabilization (Canadian Dairy Commission Act), crop insurance (Crop Insurance Act), resource development (Agricultural and Rural Development Act), feed grain assistance (Livestock Feed Assistance Act) and credit facilities (Farm Improvement Loans Act, Prairie Grain Advance Payments Act, Farm Credit Act and Farm Machinery Syndicates Credit Act). These measures, with the exception of the Agricultural and Rural Development Act (see pp. 470-471), are described individually below.

Agricultural Stabilization Act.—The Agricultural Stabilization Act (SC 1958, c. 22, proclaimed Mar. 3, 1958) established the Agricultural Stabilization Board and repealed the Agricultural Prices Support Act, 1944. The Board is empowered to stabilize the prices of agricultural products in order to assist the agricultural industry in realizing fair returns for labour and investment, and to maintain a fair relationship between prices received by farmers and the costs of goods and services that they buy.

The Act provides that, for each production year, the Board must support, at not less than 80 p.c. of the previous ten-year average market or base price, the prices of nine commodities (cattle, hogs and sheep; butter, cheese and eggs; and wheat, oats and barley produced outside the prairie areas as defined in the Canadian Wheat Board Act). Other commodities may be supported at such percentage of the base price as may be approved by the Governor in Council. Since the Act came into force, the following farm products, other than the nine named commodities, have been supported at one time or another: honey, potatoes, soybeans, sunflower seeds, sugar beets, tobacco, turkeys, apples, peaches, sour cherries, apricots, raspberries, asparagus, tomatoes, milk for manufacturing and skim

milk powder. The Board may stabilize the price of any product by an offer-to-purchase, by a deficiency payment, or by making such payment for the benefit of producers as may be authorized.

In stabilizing prices of certain commodities by means of deficiency payments, the price stabilization program has been assisting the agricultural industry to make production adjustments from a position of excessive supply to one of more normal relationship between supply and demand. The institution of limited deficiency payments by the Board assists in the adjustment of production in a relatively short time. During the period of adjustment, the Board guarantees a minimum average return to producers for a limited quantity of product.

The cost of stabilization programs under the Act averages \$58,500,000 a year. The Board has available a revolving fund of \$250,000,000. Losses incurred are made up by Parliamentary appropriations and any surplus is paid back to the Consolidated Revenue Fund. An Advisory Committee named by the Minister of Agriculture and composed of farmers or representatives of farm organizations assists the Board in its operations.

Canadian Dairy Commission Act.—The Canadian Dairy Commission was established by the Canadian Dairy Commission Act, 1966, and became operative on Apr. 1, 1967. The affairs of the Commission are directed by three Commissioners, and its objects are "to provide efficient producers of milk and cream with the opportunity of obtaining a fair return for their labour and investment and to provide consumers of dairy products with a continuous and adequate supply of dairy products of high quality".

To perform its functions, the Commission is authorized to stabilize prices of major dairy products through offers to purchase at fixed prices, thus establishing stable prices in the interests of both producers and consumers. The Commission may borrow from the Minister of Finance the funds required for such purchases to a maximum of \$100,000,000, which must be repaid.

The Commission administers the payment of funds provided to it by the Government for subsidies to producers of milk and cream used in the production of dairy products. These payments supplement returns to producers from the market and permit market prices to be kept at reasonable levels. The total quantity of milk and cream on which subsidy is paid is restricted to the volume required to serve the Canadian domestic market. Each producer is given a quota for the amount for which he is eligible for subsidy. The Commission, indirectly, pools returns to producers from products sold on the domestic and export markets through an export equalization fund. Money for this is deducted from the subsidy and payments are made to equalize export prices with domestic prices for any surplus products that must be exported.

The Commission also has authority, under regulation by the Governor in Council, to exercise control of the interprovincial and export movement of dairy products, and to perform other functions related to its responsibilities.

Crop Insurance Act.—To assist in making the benefits of insurance protection on crops available in all provinces, the Crop Insurance Act was passed in 1959. This Act does not set up any specific insurance scheme but rather permits the Federal Government to assist the provinces to do so by making direct contributions toward the cost of providing crop insurance. The initiative for establishing schemes to meet their own regional requirements rests with the provinces. Schemes may be organized on the basis of specific crops or areas within the provinces and agreements between the provinces and the Federal Government set out the terms of insurance coverage.

Under the Act and amendments of 1964 and 1966, the Federal Government will pay 50 p.c. of the administrative costs incurred by a province and 25 p.c. of the amount of premiums required to make the scheme actuarially sound. In addition, the Federal Government may make loans to any province equal to 75 p.c. of the amount by which

indemnities required to be paid under policies of insurance exceed the aggregate of the premium receipts for that year, the reserve for the payment of indemnities, and \$200,000. As an alternative to such loans, the Federal Government may re-insure a major portion of the provincial risk in a program operated under the Crop Insurance Act. Farmers insured under the Act are not eligible for payments under the Prairie Farm Assistance Act, nor are they required to pay the 1-p.c. levy on grain sales as provided for under that Act.

In 1967, 33,042 farmers purchased \$90,419,146 worth of insurance coverage for their crops, compared with 24,500 farmers and \$52,000,000 worth of coverage in 1966. The increase was largely a result of the 1966 amendments to the Crop Insurance Act which broadened its scope by: (a) raising the limit of coverage from 60 p.c. of the average crop yield to 80 p.c.; (b) increasing the Government's contribution to the individual farmer's premium from 20 p.c. to 25 p.c.; (c) extending coverage to fruit trees or perennial plants, and to summerfallow that had been prepared but could not be seeded because of agricultural hazards; and (d) calculation of the average yield from the records of an individual farm where feasible, instead of from the area records.

Farm Improvement Loans Act.—The Farm Improvement Loans Act (RSC 1952, c. 110), administered by the Department of Finance, is designed to provide credit by way of loans made by the chartered banks to assist in almost every conceivable purchase or project for the improvement or development of a farm and includes the purchase of agricultural implements, the purchase of livestock, the purchase and installation of agricultural equipment or a farm electrical system, the erection or construction of fencing or works for drainage on a farm, and the construction, repair or alteration of farm buildings including the family dwelling. Credit is provided on security related to the purchase or project and on terms suited to the individual borrower.

The legislation, originally operative for three years (1945-48), has been continuous by way of extensions usually for three-year periods. The latest extension was for the period July 1, 1965 to June 30, 1968. The maximum term of a loan and the interest rate remain at ten years and 5 p.c. simple interest, respectively. The borrower is required to provide from 10 p.c. to 33½ p.c. of the cost of his purchase or project, depending on the loan category to which it belongs. The Federal Government guarantees each bank against loss sustained by it up to an amount equal to 10 p.c. of loans granted by it in a lending period. This guarantee does not apply to any loan made after the aggregate of all loans made by all banks in a given period reaches an amount fixed by statute. The current maximum stands at \$700,000,000. By Dec. 31, 1966, 3,147 claims amounting to \$2,342,613 had been paid under the guarantee since the inception of the Act, representing a net loss ratio of less than one tenth of one per cent after recoveries have been taken into account. The maximum loan or amount which may be outstanding to a borrower at any one time stands at \$15,000.

Prairie Grain Advance Payments Act.—This Act, which came into force on November 25, 1957, provides for interest-free advance payments to producers for threshed grain (wheat, oats and barley) in storage other than in an elevator under a unit quota. Advance payments of 50 cents per bu. of wheat, 20 cents per bu. of oats and 35 cents per bu. of barley are made, subject to certain restrictions as to quota and acreage. Maximum advance payment per application is \$3,000. Repayment is effected by deducting 50 p. of the initial payment for all grain delivered subsequent to the loan, other than for grain delivered under a unit quota. The amounts deducted are paid to the Board until the producer has discharged his advance.

Farm Credit Act.—The Farm Credit Act (SC 1959, c. 43, proclaimed on Oct. 5, 1959) established the Farm Credit Corporation as successor to the Canadian Farm Loan Board established in 1929. The Corporation, which is a Crown agency, reports to Parliament through the Minister of Agriculture.

The Act provides two types of long-term mortgage loans for farmers. Under Part II of the Act the Corporation may lend up to 75 p.c. of the appraised value of the farm land and buildings taken as security, or \$40,000, whichever is the lesser. Under Part III the Corporation may lend 75 p.c. of the appraised value of the farm land and buildings and of the livestock and equipment taken as security, or \$55,000, whichever is the lesser. To qualify for a loan under Part III a farmer must be under 45 years of age and have had at least five years of farming experience. Part III loans are further secured by mandatory insurance on the life of the borrower, and his farming operations are subject to supervision by the Corporation until the loan is reduced to 75 p.c. of the appraised value of the farm land and buildings. Similar life insurance and supervision are available on an optional basis to borrowers under Part II.

The interest rate on the first \$20,000 borrowed under Part II or the first \$27,500 under Part III is set by statute at 5 p.c. On that part of the loan which exceeds these amounts the interest rate is set by the Corporation with the approval of the Governor in Council. This rate can vary according to the interest rate on money borrowed by the Corporation, the operating costs of the Corporation and the allowance made for reserves against capital losses. The interest rate on the amount of loan under Part II exceeding \$20,000 and the amount under Part III exceeding \$27,500 is, at present, 6½ p.c. All loans are repayable on an amortized basis within a period not exceeding 30 years.

The Corporation has 127 field offices administered by 224 credit advisers who are responsible for informing local farmers about the services available, for pre-loan counselling on credit use, farm planning and farm management, for accepting applications and for making farm appraisals.

In addition to the amounts repaid by borrowers, funds for lending to farmers may be borrowed by the Corporation from the Minister of Finance. The aggregate amount of such borrowings outstanding at any time may not exceed 25 times the capital of the Corporation. This capital was raised by amendment to the Act in 1966 from \$24,000,000 to \$40,000,000. There were 58,258 loans to the amount of \$770,554,169 outstanding as of Mar. 31, 1967.

Farm Machinery Syndicates Credit Act.—The Farm Machinery Syndicate Credit Act (SC 1964-65, c. 29, proclaimed Dec. 11, 1964) provides the Farm Credit Corporation with authority to make loans to qualified groups of farmers (referred to as syndicate) to purchase farm machinery to be used co-operatively and primarily on the syndicate members' farms. Under this Act, the Corporation may lend a syndicate up to 80 p.c. of the cost of the machinery to be purchased but loans outstanding to any syndicate may not exceed \$15,000 per member or \$100,000. Funds for this purpose are advanced to the Corporation by the Minister of Finance.

To qualify for a loan a syndicate must have three or more members, all of whom are farming and the majority of whom have farming as their principal occupation. Loans are repayable over a term not exceeding seven years. Security is provided by a promissory note signed by each syndicate member and such other security as may be required.

The interest rate, set by the Corporation with the approval of the Governor in Council is based on the cost of funds to the Corporation, the expenses in servicing loans and an allowance for a reasonable reserve against losses; at present it is 6½ p.c. There is an initial service charge of 1 p.c. on the amount of each loan. The Corporation's field staff provide assistance to groups of farmers in making their local arrangements with respect to sharing in the use of the machinery and repayment of the loan. Up to Mar. 31, 1967, the Corporation had approved 262 loans totalling \$1,988,025.

Prairie Farm Assistance Act.—The Prairie Farm Assistance Act, passed in 1939 provides for direct money payments by the Federal Government on an acreage-and-yield basis to farmers in areas of low crop yield in the Prairie Provinces and in the Peace River area of British Columbia. Its purpose is to assist in dealing with a relief problem which the provinces and municipalities cannot do alone and to enable the farmers to put in a crop the following year. Payments for the 1966-67 crop year, as at July 31, 1967, totalled \$3,116,437; payments made under the Act since 1939 amounted to \$361,054,822.

Payments are made from the Prairie Farm Emergency Fund to which farmers contribute 1 p.c. of the value of all sales of wheat, oats, barley, rye, flaxseed and rapeseed. The additional funds required are provided from the federal treasury. The total collected through the 1-p.c. levy in the 1966-67 crop year, as at July 31, 1967, was \$11,674,082; the amount collected since 1939 was \$185,902,984.

Farmers operating land in the spring wheat area, and not covered by a federal-provincial crop insurance scheme, are eligible for awards. Crop failure and natural causes preventing seeding and summerfallowing are taken into account in making awards. These may not exceed \$800 in respect of any one farmer's total cultivated acreage.

Feed Grain Assistance.—The activities of the Feed Grain Administration of the Department of Forestry and Rural Development include the administration of a program respecting freight and storage assistance on Western Canada feed grains used for feeding livestock in Eastern Canada and British Columbia. Under the Feed Grain Assistance Regulations of the Appropriations Act, the original policy was initiated in October 1941 to enable eastern Canadian feeders of livestock and poultry to obtain western-grown feed grains at reduced cost so that livestock and poultry production could be maintained at a high level. This program was amended over the years with the introduction of a storage assistance program, freight assistance to truck movements of grains and feeds and a zone system of payment. Orders in Council passed in 1966-67 amended zone rates to more equitably equalize transport costs to all zones.

On Nov. 17, 1966, Royal Assent was given to the Livestock Feed Assistance Act authorizing the establishment of a Crown corporation known as the Canadian Livestock Feed Board, the function of which is to carry out the administration of the freight and storage assistance programs, to administer the broader objects of the Act of ensuring an availability of feed grain stocks and storage to meet the needs of livestock feeders, and to ensure reasonable stability and a fair equalization in feed grain prices in Eastern Canada and British Columbia.

During the year ended Mar. 31, 1967, \$20,263,373 was spent on the freight assistance program, aiding in the transport of 2,607,510 tons of feed grains and grain products into Eastern Canada and British Columbia, and \$570,714 was spent on the payment of storage charges on western feed grains in store in elevators and vessels in Eastern Canada.

¹ Includes 2,027 tons of corn destined for British Columbia.

Section 3.—Provincial Governments in Relation to Agriculture*

Subsection 1.—Agricultural Services

Newfoundland.—Government agricultural services in Newfoundland are operated by the Agricultural Division of the Department of Mines, Agriculture and Resources. The Division is in charge of a director who is assisted by a staff of 49 officers. For purposes of administration, the province is divided into nine districts. A fieldman with permanent headquarters is located in each district except Labrador, where the officer is resident for the summer only. Officers in charge of different phases of agricultural development visit each district on assignments from the St. John's office.

Departmental policies in support of the agricultural industry include: a bonus of \$125 an acre on land cleared by privately owned equipment; the distribution of ground

* Information supplied by the agricultural authorities of the various provinces.

limestone at a subsidized rate; the payment of bonuses on purebred sires; and financial assistance to agricultural societies, marketing organizations and exhibition committees. An inspection service is provided for poultry products, vegetables and blueberries, production of the latter being encouraged by the burning of suitable berry areas and the improvement of roads and trails leading to them.

Every encouragement is given to the production of livestock. Poultry and beef production have increased with favourable marketing conditions and with departmental assistance and loans under the Provincial Farm Development Loan Act. The Provincial Veterinarian and his staff supervise the health of animals program and the joint federal-provincial project for the eradication of bovine tuberculosis.

The Agricultural Division co-operates with the Department of Education in furthering the 4-H Club movement in the province and accepts responsibility for all projects pertaining to agriculture.

Prince Edward Island.—The activities of the provincial Department of Agriculture are indicated by its staff establishment which includes, in addition to the Minister and Deputy Minister, a dairy superintendent, three check testers, three dairy herd improvement promoters, a director of veterinary services and ten subsidized practising veterinarians, a livestock director, a director of marketing and research and two research fieldmen, a director of extension, a horticulturist, a soil analysis assistant, a poultry fieldman, an economist, an agronomist, a director of 4-H Clubs, three agricultural representatives, a nursery supervisor, a forester and an assistant forester, a farm improvement supervisor, and a director, an assistant director and two extension workers of Women's Institutes.

Nova Scotia.—The Department of Agriculture and Marketing endeavours to "help the people to help themselves" through strengthening member interest in such organizations as the Nova Scotia Federation of Agriculture, the Nova Scotia Fruit Growers' Association, various agricultural co-operative organizations, credit unions and producer and marketing organizations.

New Brunswick.—Provincial government agricultural policy and programs in New Brunswick are administered and directed by the Department of Agriculture and Rural Development. Under the Minister of Agriculture and Rural Development, the Department is administered by a deputy minister, an assistant deputy minister and the directors of Branches concerned with: extension, livestock and dairying, veterinary services, poultry, horticulture, field husbandry, potato and plant protection, agricultural engineering, home economics, credit unions and co-operatives, agricultural education, and rural development.

Quebec.—Quebec agricultural policy is based on the principle that the commercial family farm is the ideal foundation for the rural social structure. It is therefore aimed at organized modernization of this type of operation. The provincial government, in conjunction with agricultural, co-operative and professional associations, seeks to increase agricultural productivity in the province by promoting the professionalization of farming, by up-dating production methods, by developing marketing procedures for farm products, and through rural development. Responsibility therefore is vested in the Department of Agriculture and Colonization operating under the authority of a minister and three deputy ministers.

The Production and Development Branch, under an assistant deputy minister, operates at the management level. Its activities are focused mainly on research, technical education, popularization of knowledge, land development, and animal and plant improvement and receive support from the Farm Credit Bureau which provides land and farm improvement loans. As a result of large-scale decentralization of provincial administration to 12 agricultural areas, farmers are receiving fast and diversified service.

Government, recognizing the importance of farm product marketing, has set up a Marketing Branch headed by a director general. This Branch is responsible for establishing quality standards for farm products and their control, wholesomeness of foodstuffs, farm product classification, fair sales practices, and for the promotion of modern processing and marketing techniques. In this field, the Department is assisted by the Agricultural Marketing Board.

These two Branches, whose function is to serve farm operators, receive guidance and support from a number of scientific and administrative services including an economics and planning service, a veterinary training service, a scientific information and publicity service, and a farm hydraulics service. Additional to this group of professional bodies is an integrated administrative service in charge of personnel, accounting, the payment of grants, property management, etc.

ARDA Quebec, which operates in a number of departments, is administered by an assistant deputy minister of the Department of Agriculture and Colonization. The government has enacted crop insurance legislation, administered by an *ad hoc* agency, to protect farmers against weather hazards. In addition, a sugar refinery and a blueberry freezing plant are operated under departmental management.

Ontario.—The Ontario Department of Agriculture and Food is administered by a deputy minister and two assistant deputy ministers. It provides financial assistance and administrative services through its Head Office, various Branches and a demonstration farm. The Dairy Branch provides an inspection, instruction and supervision service to all dairy factories and promotes the production of clean milk on farms. The Milk Commission, functioning under authority of the Milk Act, 1965, regulates and supervises the marketing of milk and cream. The Ontario Food Council, which operates as a separate Branch, deals with the problems of marketing and merchandising Ontario's agricultural food products and conducts a market-development program to increase sales at home and abroad. Some 20 local marketing boards, handling about 40 commodities, are supervised by the Farm Products Marketing Board. Crop insurance is provided for winter wheat, spring grains and forage crops by the Crop Insurance Commission.

Through a staff of agricultural representatives, one of whom is located in each county and district, the Extension Branch carries on an educational and extension service, and gives leadership to 4-H Club work and to the Ontario Junior Farmers' Association. It also assists farmers and settlers in northern Ontario in connection with land clearing and breaking and with improvement of farms and livestock. The Home Economics Branch gives leadership to organized activities of rural women. The Live Stock Branch promotes livestock improvement policies and gives support to purebred livestock associations. The Veterinary Services Branch administers the Community Sales Act, the Dead Animal Disposal Act, meat and livestock inspection and disease control, and provides diagnostic and extension services.

The Farm Economics, Co-operatives and Statistics Branch carries on research in farm business including cost analysis, marketing and land use; it assists co-operatives to operate sound businesses under the control of their members and administers the Co-operatives Loans Act and, in co-operation with the Dominion Bureau of Statistics, it gathers and publishes statistics of agricultural production. The Agricultural and Horticultural Societies Branch provides assistance to agricultural and horticultural fairs and exhibitions, ploughing matches and other competitions and administers the Community Centres Act. A Demonstration Farm in northern Ontario at New Liskeard demonstrates production methods adaptable to that area, present emphasis being on beef cattle. The Soils and Crops Branch assists in the development of good cultural practices, promotes the use of improved strains of seed, works for the improvement of pastures and administers the Weed Control Act.

Agricultural research in Ontario is conducted by the Ontario Research Institute and by the Ontario Agricultural College, the Ontario Veterinary College and Macdonald

Institute (three institutions which are now part of the University of Guelph), Western Ontario Agricultural School, Kemptville Agricultural College and the Horticultural Research Institute. The Ontario Research Institute, operated under a director who is responsible to the Deputy Minister, co-ordinates all research activities of the province, including those of the agricultural schools and colleges and, in addition, conducts an active research program in the interests of agriculture and industries associated with agriculture. The Horticultural Research Institute at Vineland and Simcoe is responsible for the integration of all horticultural research in the province.

Manitoba.—The Department of Agriculture serves Manitoba through the following branches and services.

The Extension Service deals with rural extension education generally and has specialists devoting attention particularly to agricultural engineering, entomology and beekeeping, radio, TV and information, 4-H Clubs and women's work, manpower and rural development. Meetings, field days, and short courses are held; 37 agricultural representatives and six assistants are located in 35 offices in the province, each serving from one to five municipalities, four manpower extension agents serve the Interlake region, and 14 home economists serve designated areas.

The Animal Industry Branch develops and administers policies that encourage the improvement and efficient production of different classes of livestock, including poultry, supervises the grading of cream and inspects dairy manufacturing plants. Several Acts to promote high quality products for consumer protection are administered in co-operation with federal departments.

The Soils and Crops Branch encourages the development, production and improvement of cereal, forage and special crops and horticulture and promotes proper land use through soil conservation programs. The Branch develops and administers policies that encourage good field crop husbandry, soil conservation and weed control.

The Economics and Publications Branch deals with agricultural economics, supervises the farm business clubs and publishes and distributes annually approximately 250,000 bulletins, circulars, posters, leaflets, etc. The Branch is responsible for publishing provincial agricultural statistics and maintains an agriculture reference library.

The Co-operative Services Branch registers and supervises co-operatives and credit unions and administers the Acts governing them. It also collects and compiles statistics on co-operative activity throughout the province.

The Veterinary Services Branch provides a diagnostic laboratory for animal diseases; administers the brucellosis control program, the Veterinary Services District Act and the Veterinary Science Scholarship Fund Act; and works in close co-operation with practising veterinarians and the federal Health of Animals Branch in the control of livestock and poultry diseases.

Saskatchewan.—The Saskatchewan Department of Agriculture is composed of the following branches and services.

The Agricultural Representative Branch has a technical staff of 55, which serves all branches of the Department as well as the other agencies operating within the Co-operative Agricultural Extension Program. Agricultural representatives are active in all federal, provincial and university farm services; they work through Agricultural Conservation and Improvement Committees in each rural municipality and local improvement district to supply the farmer with scientific and practical information and to develop district improvement programs. The Department pays one half the cost of local group development projects. In farm labour matters, co-operation is maintained with the federal Departments of Manpower and Immigration and of Labour.

The Production and Marketing Branch is comprised of three major divisions—Animal Industry, Plant Industry and Veterinary. The first two divisions provide specialist services to agriculture and agricultural representatives in field crops, weed and

insect control, soil conservation, horticulture, agriculture, livestock and poultry, and administer related Acts and programs. The Veterinary Division administers the Veterinary Service District Act and Calftlood Vaccination Program, provides laboratory services and co-operates with the Federal Government and local veterinarians in disease prevention and control.

The Conservation and Development Branch provides engineering services for irrigation development, usually in co-operation with the Federal Government, and for drainage programs and water utilization and control projects. Land reclamation and development and the construction of provincial community pastures also come within its jurisdiction.

The Lands Branch administers Crown land, except forest reserves and parks in settled areas, classifies it according to the use for which it is best suited and disposes of it under lease or sale. The Branch also secures land control for land utilization projects, supervises new settlement projects, pays for clearing and breaking by farmers on provincial leases, and operates provincial community pastures.

Farmers are assisted by the Family Farm Improvement Branch which gives technical advice at the farm on the construction of farm buildings and on farmstead planning, mechanization and materials handling. The Branch conducts research for farm water and sewage works and provides technical and financial assistance for their installation.

The Economics and Statistics Branch undertakes research and investigations required to formulate and evaluate policies and programs that will ensure a high level of growth and efficiency in Saskatchewan's agriculture; it collects, analyses and distributes economic information and principles to assist people interested in or engaged in agricultural pursuits. Data on crop conditions, production, marketings and income are available from the statistics Division. Farm information is dispensed daily over private radio stations, over TV stations and to the press by the Information Division.

Alberta.—The Alberta Department of Agriculture has seven Divisions. The Plant Industry Division administers programs and policies relating to crop improvement; crop protection and pest control; soils and soil conservation; weed control; horticulture; apiculture and special projects. A crop diagnostic service is offered through a Crop Clinic at Edmonton and horticultural services at a horticultural station at Brooks; a tree nursery at Oliver provides trees for farm planting.

The Animal Industry Division administers legislation, policies and programs in the broad area of livestock, dairy and poultry production and in processing and marketing, including: setting standards for and approving public sales of sires; sire purchase assistance; BOP programs for beef cattle, swine and sheep; extension programs for all classes of stock; administering standards and qualifications for the artificial insemination (AI) industry; supervising feeder associations; brand registration and inspection; licensing of butchers, livestock dealers, stockyards and AI technicians; pound districts and sale of horned cattle. The testing, grading and purchasing of raw produce by all dairy plants are under regulation, as are standards of construction, manufacture, processing, sanitation and temperature control for dairy and frozen-food plants. A regular cow-testing service to provide the basis for breeding, feeding and culling dairy cattle is available to dairy producers, and chemical and bacteriological analyses are conducted for industrial directives. Licences are issued to poultry hatcheries, wholesalers, first receivers and truckers and programs are conducted for control of pullorum-typhoid diseases of chicken- and turkey-hatching egg supply flocks; extension programs, cost studies, disease tests and surveys, and research projects with respect to poultry are also carried out.

The Veterinary Services Division provides diagnoses of livestock and poultry diseases and conducts investigations of disease conditions; provides lecture services for the University of Alberta and for other groups; promotes policies aimed at reducing losses such as brucellosis control, stockyard inspection, swine health programs, mastitis, etc.; and administers the licensing and exporting of live fur bearing animals and pelts and assists fur farmers in care, management and stock improvement.

The Extension Branch of the Agricultural Extension and Colleges Division operates 51 offices and employs 69 district agriculturists and 28 district home economists who supply information and guidance to farm families and promote progressive agriculture and home-making policies and programs. Their work is co-ordinated by seven regional agriculturists and is complemented by an expanding staff of regional specialists in livestock, plant industry, economics, engineering, and home economics. The field staff directly supervise the program for 526 4-H clubs with 1,917 adult leaders. Five broadcasts are conducted each week over ten radio stations and weekly and daily press material is issued to radio, TV and the press; publications are supplied to the rural public and visual aids are provided for department staff members. Agricultural and vocational colleges are operated at Olds, Vermilion and Fairview, all three offering five courses in agriculture: a general course, or majors in plant science, animal science, agricultural mechanics, and farm management. They also offer a complete business course and a short course in land appraisal and assessment. Special courses include horticulture, fashion and design, and irrigation technology at Olds; home economics and AI technician training at Vermilion; and motor mechanics and welding at Fairview.

The Agricultural Economics Division provides extension information on farm management, credit and marketing to aid farmers in instituting good business practices on the farm; collects, analyses and disseminates agricultural statistics in collaboration with the Dominion Bureau of Statistics; conducts studies on farm production costs and returns, marketing, and resource and rural development; and provides advisory assistance on economic matters to government departments, the agricultural industry and farm groups. Credit is made available to farmers for the purchase of land under the Farm Purchase Credit Act and for home improvements under the Farm Home Improvement Act.

The Water Resources Division administers legislation involving the use of water by individuals and organizations within Alberta. Division engineers construct drainage, irrigation, water supply, river control and erosion control projects when it is in the public interest to do so. Staff agrologists are concerned with land levelling for irrigation purposes and assist in land development planning and on farm utilization of water resources. Alberta's large-scale water conservation and utilization program is a direct responsibility of the Division and includes general groundwater inventories and exploration for groundwater supplies for community use. The Prairie Rivers Improvement and Management Evaluation (PRIME) embodies major water diversion and storage areas and is the most recent and largest of the long-term water conservation projects undertaken by the Division.

The Program Development Division administers the provincial ARDA program, the lands and forest land utilization program, research liaison with the University of Alberta, agricultural liaison on water resource development, trusteeship of the Lethbridge North and United Irrigation Districts, provides agricultural representation on the Highway Traffic Board, etc. The Agricultural Products Marketing Council establishes and regulates marketing boards and commissions which assist in the marketing of agricultural products. The Division assists with the development and organization of agricultural programs by local government and is developing a new policy for the administration, operation, maintenance and reconstruction of irrigation projects and districts in the province.

British Columbia.—The Department of Agriculture comprises three Divisions: General Administration, General Services, and Production and Special Services. General Administration is responsible for the direction of policies affecting farmers' institutions, institutional farms, personnel and publications. The General Services Division includes the Agricultural Rehabilitation and Development Act (ARDA), Crop Insurance, Farm Economics, and Markets and Statistics Branches. The Production and Special Services Division includes all other Branches—Agricultural Development and Extension, Apiary, Dairy, Entomology and Pest Control, Field Crops and Soil Testing, Horticulture, Plant Pathology, Poultry, Soil Survey, and Veterinary and Livestock.

The Agricultural Development and Extension Branch offers general information services to farmers through 17 offices located in all major farming districts. In addition, the Branch provides agricultural engineering service and supervision of the 4-H Clubs and government land-clearing programs. The Horticulture Branch serves the fruit, vegetable and allied industries through nine branch offices. The Veterinary and Livestock Branch administers regulations pertinent to livestock production and marketing and provides veterinary services, brands inspection and associated dairy herd improvement services at 10 locations throughout the province.

Subsection 2.—Agricultural Schools, Colleges and Universities

All of the provinces of Central and Western Canada have agricultural colleges in association with universities that give courses leading to degrees in agricultural science and home economics and also provide postgraduate courses; Ontario, Quebec and Saskatchewan have veterinary colleges. In addition, all of these provinces have schools of agriculture or diploma courses that provide basic training for young people intending to return to farms or interested in employment in businesses allied with agriculture.

In the Maritime Provinces, training in scientific agriculture is available at colleges in Prince Edward Island and Nova Scotia where courses leading to third-year admission to degree courses elsewhere are given. Vocational and short courses are available in all three provinces. All colleges of agriculture engage in research and extension activities.

Section 4.—Statistics of Agriculture*

The collection, compilation and publication of statistics relating to agriculture is a responsibility of the Dominion Bureau of Statistics. Valuable information is obtained through the Censuses of Canada, through partial-coverage mailed questionnaire surveys and from the administrative records of government operations. Limited statistics from the 1966 Census of Agriculture are presented in Section 5 of this Chapter, pp. 526-533.

The Bureau collects and publishes primary and secondary statistics of agriculture on an annual and monthly basis. The primary statistics relate mainly to the reporting of crop conditions, crop and livestock estimates, wages of farm labour and prices received by farmers for their products. The secondary statistics relate to farm income and expenditure, per capita food consumption, marketing of grain and livestock, dairying, milling and sugar industries and cold storage holdings. In the collection of annual and monthly statistics, the Canada Department of Agriculture and various provincial departments, as well as such agencies as the Board of Grain Commissioners and the Canadian Wheat Board, contribute statistical data to the Bureau and aid directly in DBS survey work. Many thousands of farmers throughout Canada send in reports voluntarily and dealers and processors also provide much valuable data. The figures contained in this Section do not include estimates for Newfoundland; agriculture plays a relatively minor part in Newfoundland's economy and commercial production of most agricultural products is quite small. In the following Subsections, details are given for 1966 with earlier comparisons; figures for the latest year are subject to revision and it should be noted that many of those given for earlier years have been revised since the publication of the 1967 Year Book.

Subsection 1.—Income from Farming Operations

Cash Receipts from Farming Operations.—Estimates of cash receipts from farming operations include data concerning cash receipts from the sale of farm products, Canadian Wheat Board participation payments on previous years' grain crops, net cash advances on farm-stored grains in Western Canada, deficiency payments made by the Agricultural Stabilization Board, and supplementary payments. Farm cash receipts

* Revised in the Agriculture Division, Dominion Bureau of Statistics.

from the sale of farm products include the returns from all sales of agricultural product except those associated with direct inter-farm transfers. The prices used to value all products sold are prices to farmers at the farm level; they include any subsidies, bonuses and premiums that can be attributed to specific products but do not include storage, transportation, processing and handling charges which are not actually received by farmers.

Total cash receipts from farming operations for 1966, excluding supplementary payments, are estimated at \$4,232,200,000 for Canada, excluding Newfoundland. This estimate is the record high to date; it is 11.2 p.c. above the previous record of \$3,805,500,000 set in 1965 and 28.4 p.c. above the average for the five years 1961-65. Returns from nearly all the contributing items were up in 1966 but the most significant increases were recorded for wheat and cattle. Offsetting the gains to some extent were reduced cash receipts from the sale of potatoes and smaller Canadian Wheat Board payments. Total cash receipts increased in all provinces except Prince Edward Island and New Brunswick where income from potatoes declined significantly as a result of lower prices.

7.—Cash Receipts from Farming Operations (excluding Supplementary Payments)¹, by Province, 1963-66

Province	1963	1964	1965	1966
	\$'000	\$'000	\$'000	\$'000
Prince Edward Island.....	25,299	31,674	40,629	36,412
Nova Scotia.....	47,399	46,735	51,487	55,510
New Brunswick.....	40,901	47,458	60,397	53,710
Quebec.....	453,902	459,330	509,231	500,610
Ontario.....	996,936	1,020,275	1,103,600	1,232,210
Manitoba.....	268,620	297,578	340,488	373,410
Saskatchewan.....	692,114	836,317	880,703	945,110
Alberta.....	523,313	597,792	653,364	754,710
British Columbia.....	149,397	153,747	165,620	190,110
Totals.....	3,197,881	3,490,896	3,805,519	4,232,200

¹ See text below.

In addition to the above income, farmers received supplementary payments amounting to \$41,300,000 in 1966 as against \$12,800,000 in 1965. It should be noted that these payments include only those made under the provisions of the Prairie Farm Assistance Act and other government assistance to farmers who suffered losses as a result of adverse weather conditions; supplementary support payments to dairy producers made under the provisions of federal and provincial dairy support programs are not included in this item but are added to the total cash receipts from farming operations. Thus, farm cash receipts from farming operations plus supplementary payments totalled \$4,273,600,000, figure 11.9 p.c. above the previous record high of \$3,818,300,000 attained in 1965.

Field Crops.—During 1966, farmers' total returns from the sale of field crops, cash advances on farm-stored grains in Western Canada, and Canadian Wheat Board payments amounted to \$1,775,100,000, a figure 8.6 p.c. above that of \$1,635,100,000 for 1965. This estimate of total field crop returns for 1966 accounted for 41.9 p.c. of farmers' total cash receipts from farming operations, as compared with 43.0 p.c. a year earlier.

Farmers' returns from wheat at time of delivery increased more than returns from any other commodity considered in farm cash receipts. From \$658,800,000 in 1965, returns rose to \$803,100,000, largely as a result of higher marketings. Returns to growers from oilseed crops also moved sharply upward, particularly those from flaxseed and rapeseed. Higher marketings of flaxseed brought total receipts up to \$63,000,000 from \$47,200,000 in 1965 and increased marketings and higher prices for rapeseed resulted in returns of \$43,800,000 compared with \$26,800,000 in the previous year. Returns to tobacco growers totalled \$117,700,000, well above the \$88,400,000 of 1965, reflecting increased production.

* Payments to farmers under the provisions of the Prairie Farm Assistance Act are made from the Prairie Farm Emergency Fund to which farmers contribute by means of a 1-p.c. levy on grain marketings.

and substantially higher prices. Returns from most of the other field crops were also above the 1965 levels. However, cash receipts from potatoes were down from \$104,300,000 in 1965 to \$80,500,000 because a marked decline in prices more than offset higher production and heavier marketings. A further offset to the generally higher returns was the lower total participation payments made by the Canadian Wheat Board, which amounted to \$229,200,000 as against \$296,800,000 in 1965.

Livestock and Livestock Products.—Total cash receipts from the sale of livestock and livestock products amounted to \$2,342,800,000 in 1966, nearly 11 p.c. above the 1965 level of \$2,114,200,000. This estimate represents 55.4 p.c. of total cash receipts from farming operations. Returns from cattle and calves totalled \$886,600,000 which was an increase of 14.8 p.c. above the 1965 estimate, and those for hogs totalled \$422,200,000, an increase of 11.5 p.c. Both increases resulted from substantially higher prices.

Cash receipts from the sale of dairy products (exclusive of supplementary support payments) totalled \$581,900,000 in 1966 compared with \$559,600,000, in 1965; when supplementary payments are added, the figures are \$650,300,000 and \$576,500,000, respectively. The continued expansion in poultry meat production was reflected in further gains in total cash receipts from this commodity. Egg prices averaged considerably higher in 1966 than in 1965, which more than made up for the decline in marketings to give a total return of \$163,000,000 compared with \$145,000,000 in 1965.

Net Income of Farm Operators from Farming Operations.—Two different estimates of net income from farming operations are prepared by the DBS. One is called *realized net income* and is obtained by adding together cash income from farming operations, supplementary payments and the value of income in kind, and deducting farm operating expenses and depreciation charges. This estimate of farm net income represents the amount of income from farming that operators have left for family living or investment after provision has been made for operating expenses and depreciation charges. The second estimate is referred to as *total net income* and is obtained by adjusting realized net income to take into account changes occurring in inventories of livestock and stocks of grains on farms between the beginning and the end of the year. The latter estimate is the one used to calculate the contribution of agriculture to national income.

For the year 1966, it is estimated that realized net income of farm operators from farming operations amounted to \$1,786,600,000. This estimate is 17.5 p.c. above the 1965 level of \$1,521,000,000 and 11.4 p.c. above the previous record of \$1,603,900,000 set in 1951. During 1966, record-high farm cash receipts together with increased income in kind and supplementary payments more than offset increased farm operating expenses. Changes from 1963 to 1966 in these items are covered in Table 9. Income in kind, which is the value of farm consumption of home-produced farm products plus an imputed rental value of the farm dwelling, totalled \$469,600,000 in 1966 as against \$432,000,000 for 1965. This increase was due largely to a higher total imputed rental value of farm homes and, to a lesser extent, to an increase in the value of consumption of meat and poultry products.

During 1966, total operating expenses and depreciation charges reached a new high level of \$2,956,500,000, a figure 8.3 p.c. higher than the estimate of \$2,729,300,000 for 1965. Nearly all items considered in the estimates of farm operating expenses were higher in 1966. Expenditure on feed recorded the greatest increase at \$525,500,000; it was well above the outlay of \$459,200,000 in 1965 as a result of increased use of prepared feeds and higher prices. Costs of operating farm machinery continued to move up because of increased fuel expenditures and greater outlays for repairs. The growing importance of fertilizer as an item of farm expense is reflected in the increase in the outlay for this item from \$138,800,000 in 1965 to \$164,100,000 in 1966; the increase was particularly marked in the Prairie Provinces. Interest payments on farm indebtedness continued to move up as farmers made greater uses of credit sources available to them. The farm labour force declined during 1966 but wages reached new high levels.

Total farm net income amounted to \$1,977,900,000 in 1966, an increase of 26.4 p.c. over the 1965 total of \$1,565,200,000 and slightly higher than the previous record of \$1,931,400,000 established in 1951. Farm inventories of grains in the Prairie Provinces increased substantially between the beginning and the end of the year as a result of the record crop production. The lower cattle population in 1966 was offset by increased numbers of hogs and poultry on farms.

9.—Net Income of Farm Operators from Farming Operations, by Item and by Province, 1963-66

(Exclusive of Newfoundland)

NOTE.—Includes estimated rental value of farm homes, supplementary payments made under the provisions of the Prairie Farm Assistance Act and payments under the Western Grain Producers' Acreage Payment Regulations.

Subsection 2.—Volume of Agricultural Production

In 1966 the index of physical volume of agricultural production for Canada reached a new high level of 182.8 (1949=100), being 12.8 p.c. above the previous record of 162.0 reached in both 1963 and 1965. A large part of the increase over 1965 may be attributed to the record-breaking wheat crop produced in 1966. Production of potatoes, livestock and poultry meat was also higher in 1966 but the contribution of these products to total output was well below that for wheat. Little change occurred in the output of vegetables and dairy products but the production of eggs was down.

All provinces except Manitoba contributed to the increase in agricultural production in 1966, the advances ranging from 31.1 p.c. in Saskatchewan to 4.3 p.c. in Quebec. The gains of 31.1 p.c. and 14.6 p.c., respectively, in Saskatchewan and Alberta reflected the exceptionally large crop production, particularly wheat, and also an increased output of livestock. The increase of 10 p.c. in British Columbia was attributable to a substantial advance in fruit production and modest gains in the output of potatoes, livestock, poultry and dairy products. Farmers in Prince Edward Island and New Brunswick increased their production by about 9 p.c.; potatoes and hogs accounted for most of the gain on the Island and potatoes and poultry meat were the most important contributors in New Brunswick. Production in Nova Scotia rose by nearly 5 p.c., for the most part due to increased output of potatoes, hogs and poultry products. In Ontario, gains in the production of potatoes, tobacco, livestock and poultry products were the most important contributors to the over-all gain of 5 p.c. in agricultural output. The 4.3-p.c. increase in Quebec was largely attributable to higher production of livestock, poultry meat, dairy and maple products. The slight decrease in the Manitoba index—from 164.1 in 1965 to 163.2 in 1966—was caused by lower output of oats and flaxseed.

The index of physical volume of agricultural production is a measure of unduplicated gross farm production. In its construction, provision has been made to avoid double counting of farm output. Within a province, such double counting occurs when feed grains, credited to field crop production, are fed to livestock and appear later as livestock and livestock products. Interprovincially, this duplication occurs when feed grains produced in one province are fed in another, and when feeder cattle raised in one section of the country are shipped to another for finishing.

During 1966, the index of farm production for 1935 and subsequent years was revised and converted from a weight base of 1947-51=100 to 1949=100 so as to further facilitate comparison with other DBS production indexes constructed on the same base. The revisions involved the introduction of the quantity data recently used to revise estimates of farm cash receipts from the sale of farm products, farm income in kind, and value of changes in year-end inventories of field crops and livestock. The weight base of 1949=100 now coincides with the time base.

10.—Index Numbers of Physical Volume of Agricultural Production, by Province, 1957-60

(1949=100. Exclusive of Newfoundland)

NOTE.—For a description of the index, methods and coverage, see DBS publication *Index of Farm Production 1962* (Catalogue No. 21-203). The index numbers in this table have been revised since the publication of the 1961 Year Book; see text on p. 497.

Year	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Total

Subsection 3.—Field Crops*

The weather was generally favourable to field crop production in many parts of Canada during 1966. In the Prairie Provinces soil moisture reserves were excellent at seeding time and after some delays, particularly in the flooded Red River Valley, seeding progressed rapidly from mid-May onward. Although June precipitation was light, rainfall later in the season improved growing conditions except in the northern parts of Alberta and Saskatchewan where dryness adversely affected out-turns. Fine weather in early September permitted uninterrupted harvesting in all but northern regions where wet conditions caused delay but by mid-October the bulk of the crop had been taken off. Losses from plant diseases and other causes were minimal. The highlight of the season was the record crop of wheat, most of which fell in the top three grades.

In the Central Provinces, the Maritimes and British Columbia, the progress of seeding spring grains was normal. In Ontario and parts of Quebec, low temperatures slowed crop development and mid-season drought affecting much of Ontario and western Quebec reduced yields of spring-sown grains. The Ontario winter wheat crops, however, escaped the effects of drought and record yields were obtained. In the Maritimes, yields and quality were good for the spring grains, hay and most other crops. In British Columbia cool weather reduced the out-turn of early season crops but midway in the growing season warm weather stimulated plant growth to produce above-average crops. In the Peace River Block, unfavourable weather up to mid-season resulted in only fair to average yields.

The index of field crop production (1949=100) reached a record 203.0 in 1966, well above both the 1965 level of 171.8 and the previous high of 176.5 achieved in 1963. The Saskatchewan index rose to 274.2 from 212.8 in 1965 and exceeded the former record of 249.5 reached in 1963; the Alberta index reached a record 252.1 compared with 214.1 in 1965; the British Columbia index was 155.9 compared with 133.4 in 1965, the previous high; in Manitoba, smaller out-turns, mainly of oats and oilseed crops, resulted in an index level of 159.5 compared with the 1965 high of 172.5. In Eastern Canada the indexes were up for all provinces from year-earlier levels due principally to larger out-turns of grain, hay and potato crops. Larger winter wheat, corn and soybean crops helped advance the Ontario index to a record 156.8 compared with 144.1 in 1965 and the previous high of 146.1 reached in 1964; the Quebec index of 128.2 was well above the 92.9 of 1965 but was short of the all-time high of 138.3 achieved in 1951. The 1966 indexes for Prince Edward Island, Nova Scotia and New Brunswick, with 1965 levels in brackets, were, respectively, record 117.1 (79.8); 70.6 (58.8); and 102.8 (84.3).

* The supply and disposition of the major Canadian grains is dealt with in Chapter XXI, Part I, Sect. 2, under the heading of "The Grain Trade, 1965-66".

Canada's 1966 wheat crop was estimated at a record 827,338,000 bu., 27 p.c. above the 1965 harvest of 648,917,000 bu. and 65 p.c. above the ten-year (1955-64) average of 501,928,000 bu. Average yield per acre was up by about 22 p.c. over 1965 and seeded acreage by 5 p.c. The average protein content of the 1966 crop of hard red spring wheat was 13.2 p.c. compared with 13.5 p.c. obtained in 1965 and the average of 13.6 p.c. for all Western Spring wheat crops for the period 1927-66.

Total supplies of Canadian feed grains (corn, oats, barley, rye, mixed grains and buckwheat) in the crop year 1966-67 were well above the previous crop year, reflecting a record crop of barley and increased production of grain corn and rye and higher opening stocks of barley and rye. Compared with 1965-66, supplies of oats (Aug. 1, 1966 carryover of 127,163,000 bu. plus the 1966 production of 374,678,000 bu.) were down 8 p.c., supplies of barley (carryover of 97,753,000 bu. plus a crop of 301,235,000 bu.) were up 32 p.c., and supplies of rye totalling 27,792,000 bu. were up 11 p.c. The 1966 record crop of mixed grains at 81,443,000 bu. was up from 74,170,000 bu. in 1965 and production of grain corn was at an all-time high of 65,211,000 bu. Net feed-grain supplies (total supplies less estimated exports, seed requirements and other domestic uses) amounted to 19,400,000 tons, 8 p.c. above the 1965-66 total of 18,000,000 tons and 19 p.c. above the ten-year (1955-64) average of 16,400,000 tons.

A record 26,049,000 tons of tame hay was produced in 1966, 23 p.c. more than in 1965. The 6,643,000 tons of fodder corn produced was also a record and was 29 p.c. higher than in the previous year. The 1966 oilseed crops of soybeans, rapeseed, mustard seed and sunflower seeds were all significantly larger. Potato production at 54,679,000 cwt. was up 18 p.c. over 1965; New Brunswick led the provinces with an output of 14,450,000 cwt., followed by Prince Edward Island, Ontario and Quebec with 10,776,000 cwt., 10,003,000 cwt. and 8,770,000 cwt., respectively. Field roots at 195,000 tons declined 34 p.c. from 1965 although the production of sugar beets showed a marginal increase to 1,167,000 tons from 1,142,000 tons.

Stocks of Canadian Grain.—Table 14 shows the stocks of Canadian grain on hand in Canada and in the United States on July 31 for the years 1964-66, with averages for the

five-year periods 1955-59 and 1959-63. Stocks in Canada are separated into those in commercial positions and those on farms. Stocks on farms and in country elevators in the Prairie Provinces are given separately.

14.—Carryover of Canadian Grain as at July 31, 1964-66, with Averages for 1955-59 and 1959-63

Subsection 4.—Livestock and Poultry

Livestock.—The livestock industry prospered in 1966. Although marketings were down, higher prices were received for all types of livestock, resulting in the highest dollar value ever reached from marketings through commercial channels. Exports remained high for cattle, calves and hogs but sheep exports were down by 50 p.c. There were 12,546,000 cattle and calves on farms in Canada (excluding Newfoundland and the Territories) at June 1, 1966, 455,000 fewer than in 1965. The number of beef cows declined to 2,768,800 from 2,870,800 in the previous year and the number of dairy cows declined from 2,885,000 in 1965 to 2,799,000 in 1966. Exports of cattle declined by almost 76,000 to 537,105, with slaughter and feeder cattle making up approximately 70 p.c. of the total. Imports of cattle and calves remained relatively low at 9,014. Prices were higher for all grades of cattle in 1966; the weighted average price for choice steers at all stockyards increased from \$24.40 in 1965 to \$26.10 in 1966.

There were 5,443,000 hogs on farms in Canada at June 1, 1966, about 6 p.c. more than in 1965 but still fewer than the estimated inventory in 1964. Live hog exports, at 12,683, were almost 47 p.c. higher than in 1965 but only 677 live hogs were imported. Marketings were 3.1 p.c. below those of the previous year, keeping prices at a record high; the weighted average price for grade A hogs at all stockyards in 1966 was \$35.05 per cwt. compared with \$31.00 in 1965.

The sheep-raising industry in Canada continued to decline in 1966. The number of sheep on farms at June 1 was 1,094,000, a decrease of more than 6 p.c. from the 1965 figure of 1,169,000. Live animals exported numbered 10,530 only about one half the number exported in 1965; imports, however, increased slightly from 18,284 to 19,465 in the same comparison. Sheep and lamb slaughtering in inspected plants were 20 p.c. lower than in the previous year.

Per capita disappearance of all red meats in 1966 was estimated at 148.8 lb., 1.2 lb. less than in 1965. The figures for individual meats were: beef 82.7 (81.7 in 1965); pork 47.7 (49.2); veal 7.0 (8.4); mutton and lamb 3.6 (2.8); offal 3.6 (3.6); canned meats 4.1 (4.3). All figures are on a cold dressed basis.

BEEF CATTLE ON FARMS, SLAUGHTERED AND EXPORTED, 1958-67

Both demand and price for choice cattle were favourable in 1967.

By the end of October 70,000 more cattle the two top grades had been marketed than the same period 1966 and at prices considerably higher than the export base

¹ Cows and heifers, two years old or over, kept for milk purposes.

The Canada Department of Agriculture inspects all livestock in plants designated as inspected establishments under the Meat and Canned Foods Act. A record is kept of these inspections and figures from 1957 are given in Table 16. Local wholesale butchering and slaughterings carried out by retail butchers and by farmers for their own use are not included. Actually, the slaughtering and meat packing industry is concentrated in a comparatively small number of large establishments to facilitate greater efficiency and utilization of products; thus the figures of Table 16 are fairly inclusive.

Slaughterings of all types of livestock declined in 1966 over the previous year; slaughterings of cattle in inspected establishments were down about 1 p.c., of calves 14.4 p.c. of sheep and lambs more than 20 p.c., and of hogs about 3 p.c.

Subsection 5.—Dairying

The average Canadian dairy herd has been increasing sharply in size but the total number of dairy cattle has been declining gradually for many years. The increase in output per cow has resulted in increased milk production every year since 1960, except for a slight decline in 1965. Milk production is concentrated in Central Canada, the provinces of Ontario and Quebec accounting for about 71 p.c. of the total quantity. Of the total output in 1966, 63 p.c. was used for factory-made dairy products, 29 p.c. was sold in fluid form and 8 p.c. was used for all purposes on farms.

¹ Used in farm butter only.² Includes values of skim milk and buttermilk retained on farms.

In 1966 the output of butter continued the declining trend in evidence for a number of years. Creamery butter production has decreased 7.6 p.c. since 1962 and farm-made butter has shown a much more significant change, dropping 50 p.c. in the same period. The 1966 output of creamery butter, which amounted to 334,000,000 lb., accounted for 7,819,000,000 lb. of milk or 42.6 p.c. of the national milk output and 69.0 p.c. of the milk used in dairy factory products. The production of farm butter accounted for only 77,000,000 lb. of milk or 0.4 p.c. of the national output. Per capita consumption of creamery butter was 17.42 lb. in 1966 compared with 18.17 lb. in 1965.

Cheese output, on the other hand, has moved gradually upward over the past 11 years, particularly in Ontario and Quebec; these two provinces accounted for 95.4 p.c. of the total output in 1966. The total Canadian production in that year amounted to about 194,000,000 lb., which represented approximately 2,128,000,000 lb. of milk or 11.6 p.c. of the total milk production. Exports of all cheese, mostly cheddar, amounted to 35,949,000 lb. in 1966 compared with 32,055,000 lb. in 1965.

¹ Factory-made cheese includes cheddar and other cheese made from whole milk and cream. ² Amounts for "other cheese" are included in Quebec, Ontario and Alberta figures but, as fewer than three firms reported in the other provinces, data cannot be included except in the Canada total.

Concentrated milk products, which comprise a large group of both whole milk and skim milk products, are moving in opposite utilization trends. The amount of milk going into whole milk products—evaporated milk, dry whole milk, partly skimmed concentrated products, etc.—is decreasing; milk used for these products amounted to 870,000,000 lb. in 1966, about 114,000,000 lb. fewer than in 1965 and 163,000,000 lb. fewer than in 1961. On the other hand, there is a steadily expanding market for solids non-fat, in the form of dry skim milk and casein; in 1966 the quantity of whole milk used

in the production of these products amounted to 3,876,000,000 lb., an increase of 15.0 p.c. over the amount used in 1965. Casein production is concentrated in Quebec, about 93 p.c. of the national total originating in that province.

The importance of international trade in this sector of the industry is evident from the fact that of every 10 lb. of whole milk powder produced in Canada, nine are exported; of every 10 lb. of casein produced, seven are sold abroad; and of every 10 lb. of skim milk powder produced, four are exported. In normal years, export values of dairy products are three times as large as import values.

¹ Includes Newfoundland for all manufactured dairy products.² Includes, in addition to the items listed, malted milk, cream powder, partly skimmed evaporated milk, whole milk powder of less than 26-p.c. fat, formula milks, evaporated milk of 2-p.c. fat, and concentrated liquid milk.³ Includes milk by-product items not listed, i.e., condensed buttermilk, powdered buttermilk, sugar of milk, casein, powdered whey, special formula skim milk products, lactalbumin and concentrated liquid skim milk. Since the quantities used for human consumption and livestock feeding cannot be separated, per capita figures include both.⁴ Includes ice cream.

Subsection 6.—Fruits, Vegetables and Other Farm Products

Fruits.—Commercial fruit growing in Canada is confined almost exclusively to rather limited areas in the Provinces of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia. Nova Scotia production is centred mainly in the Annapolis Valley and New Brunswick production in the St. John River Valley and Westmorland County. The fruit growing districts of Quebec are the Montreal area, the North Shore area, the Eastern Townships and the Quebec City district. Ontario fruit is grown in all the counties adjacent to the St. Lawrence River and the Great Lakes as far west as Georgian Bay, the Niagara district being the most productive. In British Columbia the four well-defined fruit areas are the Okanagan Valley, the Fraser Valley, the Kootenay and Arrow Lakes district and Vancouver Island. The climate elsewhere in Canada is not generally suitable for commercial tree-fruit culture. In most producing areas, particularly in the Annapolis Valley of Nova Scotia, the Niagara Peninsula of Ontario and the Okanagan Valley of British Columbia, fruit growing is either the principal or one of the most important forms of agriculture and is very important to the economy of those areas. Apples and small fruits are produced commercially in the provinces named but tender tree fruits and commercial vineyards are limited largely to Ontario and British Columbia.

Strawberries are grown commercially in all provinces for which tree-fruit statistics are prepared, as well as in Prince Edward Island. However, this crop is produced over a somewhat wider area than are tree fruits. In Nova Scotia, for example, considerable quantities of strawberries are grown in Colchester County and farther north, as well as in the apple producing areas of the Annapolis Valley. In British Columbia most of the strawberries are grown in the Fraser Valley.

Raspberries are grown commercially in Nova Scotia, New Brunswick and Quebec but the bulk of the crop is produced in Ontario and British Columbia. The Fraser Valley of British Columbia is the most important producing area.

Wild blueberries are harvested on a commercial scale in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick and Quebec. This crop is indigenous to certain areas in these provinces and a large percentage of the crop is frozen and exported. There is also some production of cultivated blueberries, particularly in British Columbia.

A marketing system has been developed for distributing fresh fruit from the specialized production areas to all parts of the country and a large proportion of the deciduous fruit consumed in Canada is grown domestically. Considerable quantities of apples, strawberries and blueberries are exported.

Tables 26 and 27 show the estimated commercial production of fruit, by kind, for the years 1964-66 and by province for 1959-66.

Vegetables.—Estimates of acreage and production of commercial vegetables in Canada are prepared for all provinces except Newfoundland and Saskatchewan; only partial estimates were prepared for Prince Edward Island until 1965. Ontario is the largest producer, followed by Quebec and British Columbia. A wide variety of crops is grown in these three provinces and a somewhat smaller range in the Maritimes and in the Prairie Provinces.

Canning, freezing and processing of vegetables are carried on in the important producing areas. The estimates in the following tables cover output of commercial growers for processing and for sale on the fresh market but do not include acreages or production of vegetables grown for home use on farms and elsewhere.

Tobacco.—Canada produces several types of leaf tobacco but by far the most important is the flue-cured or Bright Virginia type. This is grown mainly in Ontario, along with considerable quantities of burley and smaller amounts of dark (air-cured and fire-cured) tobacco. Quebec produces smaller quantities of these types as well as some cigar and pipe tobacco and small flue-cured acreages are also harvested in Prince Edward Island, Nova Scotia and New Brunswick. In 1966, increased plantings of flue-cured tobacco in Ontario from 86,870 acres to 117,471 acres was the principal reason for the production of a larger total crop than in 1965; the crop in that province increased in volume approximately 60,000,000 lb. to almost 215,000,000 lb.

A study of Department of National Revenue reports on tax-paid withdrawals of tobacco products reveals changes in the smoking habits of Canadians during the past four decades. In 1922, the first year for which comparable figures are available, Canadian annual per capita production for domestic consumption of cigarettes (calculated on the basis of total population) was 229; by 1965 it had increased to 2,198 and by 1966 to 2,323.

¹ Includes other types not specified.

Eggs.—Egg production in 1966 at 412,943,000 doz. was 4.6 p.c. lower than the output of 1965 and 7.9 p.c. lower than the record production in 1959, which amounted to 448,200,000 doz. The number of layers decreased slightly and the rate of lay per 100 layers dropped to 19,691 from 20,012. The farm selling price of eggs averaged 42.8 cents per doz. compared with 36.3 cents in 1965 so that, despite the lower production, there was an increase in total value of eggs produced. The three Maritime Provinces produced 7.5 p.c. of all eggs in 1966; Quebec, 17.3 p.c.; Ontario, 38.5 p.c.; the Prairies, 24.3 p.c. and British Columbia 12.4 p.c.

¹ Total laid less loss.

Wool.—Canada's apparent wool consumption showed a decided drop in 1966 compared with 1965. In the later year Canada produced only 8 p.c. of total requirements; imports at 61,917,000 lb. were down about 7 p.c. and exports at 3,021,000 lb. were down by almost 30 p.c. compared with the previous year. The domestic consumption shown in Table 33 is determined on the basis of production, exports and imports but does not take into consideration changes in stocks for which the data are not available. Differences in wool utilization from year to year are therefore probably less marked than is indicated by these figures.

Honey.—As shown in Table 34, honey production was 10 p.c. lower in 1966 than in 1965, a drop accounted for by a decrease in the average yield per colony. Honey is produced commercially in all provinces except Newfoundland and yields tend to vary considerably from year to year. In 1966, Alberta was the largest producer, surpassing Ontario which had the highest production in 1964. Honey bees are kept in some of the fruit growing districts for purposes of pollination and are also used for the pollination of certain seed crops.

To facilitate storage, shipment and uniformity of quality, large quantities of Canadian honey are pasteurized. Beekeepers' marketing co-operatives are active in several provinces. In 1966, 8,571,213 lb. of honey valued at \$2,353,000 were exported from Canada, the main countries of destination being Britain, West Germany, Belgium and Luxembourg, Ireland, Japan and the United States.

Sugar Beets and Beet Sugar.—Sugar beets are grown commercially in Quebec, Ontario, Manitoba and Alberta and beet sugar factories are located in these provinces. In Quebec, commercial production is centred in the St. Hilaire area of the Eastern Townships; in Ontario, production is confined to the southwestern section of the province. Alberta produces the largest crop and in that province sugar beets are grown under irrigation.

Maple Sugar and Maple Syrup.—Maple syrup is produced in the Provinces of Nova Scotia, New Brunswick, Quebec and Ontario. The bulk of the crop comes from the Eastern Townships of Quebec, a district famous both in Canada and in the United States as the centre of the maple products industry. Virtually all of the maple products exported are sent to the United States with the larger proportion moving as sugar, although substantial quantities of syrup are also shipped. Much of the syrup sold in Canada is marketed in one-gallon cans direct to the consumer from the producer but a considerable amount of both sugar and syrup is sold each year to processing firms.

Nursery Stock.—Statistics concerning the nursery industry in Canada for recent years are presented in Tables 38 and 39. All nurseries were asked to report quantities sold of stock propagated during these years; stock purchased from other nurseries in Canada was excluded to prevent duplication. A total of 257 nurseries reported shipments in 1966. Wholesale value of nursery stock shipments of fruit trees, etc., amounted to \$736,222 compared with \$502,357 in the previous year, and shipments of ornamental species to \$5,350,711 compared with \$4,761,177.

Greenhouse Operations.—Annual surveys are made of greenhouse operations. Resulting figures are based on data reported by firms and individuals returning questionnaires, with the exception of that for cucumbers and tomatoes grown in Essex County of Ontario (the most important producing area), which are based on information obtained from the local co-operative marketing agency. Only greenhouses used for the production of items for sale are included in the survey.

Subsection 7.—Prices of Agricultural Products

The monthly index of farm prices of agricultural products was designed to measure changes occurring in the average prices farmers receive at the farm from the sale of farm products. In comparing current index numbers with those before August 1966, certain points should be considered. Western grain prices used in the construction of the index before Aug. 1, 1966 are final prices for all grains. For the remaining months of 1966, the western grain prices used in the index are initial prices. Subsequent participation payments made on the 1966 crops will be added to the prices currently used and the index revised upward accordingly.

41.—Average Index Numbers of Farm Prices of Agricultural Products, by Province, 1962-66, and Monthly Indexes for 1965 and 1966

(1935-39 = 100)

NOTE.—A description of this index, its coverage and the methods used will be found in DBS *Quarterly Bulletin of Agricultural Statistics* (Catalogue No. 21-003) for October-December 1946. Monthly prices of grain and of live-stock are carried in the current issues of the same publication.

¹ No sales reported.

Subsection 8.—Food Consumption

Food consumption figures represent available supplies, including production and imports, adjusted for change of stocks, exports, marketing losses and industrial uses. All calculations are made at the retail stage of distribution, except for meats for which the figures are worked out at the wholesale stage. The amount of food actually eaten would be somewhat lower than indicated because of losses and waste occurring after the products reach the hands of the consumer. It should also be pointed out that there are minor inaccuracies in certain of the figures since statistics of storage stocks in the hands of retailers and consumers are not available.

All basic foods are classified under 12 main commodity groups. The total for each group is computed using a common denominator for the group, for example: milk solid (dry weight) in the dairy products group; fat content for fats and oils; and fresh equivalent for fruits. All foods are included in their basic form, that is, as flour, fat, sugar, etc. rather than in more highly manufactured forms.

The series in Table 44 represents the official estimates of yearly supplies of food moving into consumption, expressed in pounds per capita, for the years 1960-64 as an average for comparison with the years 1964 and 1965.

44.—Per Capita Supplies of Food Moving into Consumption 1964 and 1965, with Average for 1960-64

Kinds of Food and Weight Base	Pounds per Capita per Annum			Percentages of 1960-64 Average

¹ Fluctuations in apparent per capita flour consumption are caused partly by lack of complete data on flour inventories in all positions. ² Includes soybean flour. ³ Tomatoes canned, tomato juice, tomato pulp, paste and purée, and ketchup. ⁴ Exclusive of Newfoundland. ⁵ Includes process cheese.

⁶ Cream powder included in whole milk powder for 1964 and 1965. ⁷ Includes cream expressed as milk.

⁸ Includes evaporated and condensed skim milk, condensed buttermilk, sugar of milk, formula skim milk products and concentrated liquid skim milk.

Disappearance of Meats and Lard.—Production of meats from slaughter in Canada total supply, distribution and per capita disappearance of meats and lard are shown in Table 45. All estimates are on a cold carcass-weight basis except canned meats, which are in terms of product.

¹ Trimmed of larding fat and excluding offal.² Includes commercial lard production and estimated lard equivalent of renderable pork fat available from all uninspected slaughter.

Section 5.—Agricultural Statistics of the Census

This Section presents a limited amount of information from the 1966 Census of Agriculture; details are contained in Volumes III, IV and V of the 1966 Census of Canada. A list of the special and advance census reports that have been released is available on request.

Number of Census-Farms and Commercial Farms.—The number of census farms in Canada declined 10.5 p.c. from 480,903 in 1961 to 430,522 in 1966. On the other hand, the number of commercial farms increased 6.9 p.c. from 259,037 to 276,835 in the same comparison.

For both census years, 1961 and 1966, a census-farm was defined as a holding of one acre or more with sales of agricultural products valued at \$50 or more during the 12 months preceding the census date of June 1. In 1966, a commercial farm was defined as a census farm that had sales of agricultural products valued at \$2,500 or more during the 12 months preceding the census date; for the 1961 Census a census-farm was classed as commercial if it reported sales of agricultural products valued at \$1,200 or more. In Table 46, however for both census years the term commercial farm refers to census-farms having had sales of agricultural products during the previous 12 months valued at \$2,500 or more.

46.—Number of Census-Farms and Commercial Farms, by Province, Censuses of 1961 and 1966

Canada.....	480,903	430,522	259,037	276,83

Farm Areas.—The total area of census-farms in 1966 was 174,124,828 acres, a 0.9 p.c. increase over the 172,551,051 acres recorded in 1961. All provinces east of Manitoba experienced decreases in total agricultural area but the four western provinces reported increases. For all of Canada, the percentage increase in improved land (4.6 p.c.) was identical to the percentage decrease in the acreage of unimproved land. The total improved land area increased from 103,403,426 acres in 1961 to 108,154,377 acres in 1966 and the total unimproved land area dropped from 69,147,625 to 65,970,451 acres. The increase in improved land reflected larger areas in crops and pasture in 1966, which more than offset a decrease of 9.2 p.c. in the acreage of summerfallow. The drop in unimproved land was accounted for almost entirely by a decrease in the area of woodland.

Economic Classification of Census-Farms.—The economic classification of census-farms was determined by the value of agricultural products sold. Commercial farms (excluding institutional type farms), were defined as census-farms reporting sales of

agricultural products of \$2,500 or more during the 12 months preceding the census date of June 1, 1966. They were subdivided into eight classes according to the total value of products sold. Small-scale farms were divided into three sub-groups according to the value of products sold—\$1,200 to \$2,499; \$250 to \$1,199; and \$50 to \$249. The group classified as institutional farms, etc., includes experimental farms, community pastures, Indian reserve farms and institutional-type farms regardless of the amount of sales of agricultural products.

Type of Commercial Farms.—Commercial farms in the 1966 Census (census-farms reporting \$2,500 or more sales of agricultural products) are classified by product type in Table 49. A criterion of 51 p.c. or more of total sales was used for this classification. For example, a census-farm was typed as a poultry farm if 51 p.c. or more of the total agricultural sales for the farm was obtained from the sale of poultry products. However, it was classed as a dairy-type farm if 40 p.c. to 50 p.c. of total sales was obtained from dairy products, provided the sale of dairy products together with the sale of cattle and calves amounted to 51 p.c. or more of the total sales.

Size of Census-Farms.—Census-farms are classified by size and by province in Table 50. Almost 53 p.c. of the census-farms of Canada contained fewer than 240 acres in 1966. However, there was a wide variation among the provinces: in the Atlantic Provinces, 77.4 p.c. of the census-farms were under 240 acres in size; in Quebec and Ontario 81.6 p.c. were under 240 acres; in the Prairie Provinces only 19.1 p.c. fell into this category; and in British Columbia the proportion was 79.1 p.c.

Tenure and Age of Census-Farm Operators.—The proportion of census-farm operators owning all or part of their land increased from 94 p.c. in 1961 to 95 p.c. in 1966 and, as a consequence, the percentage of census-farms operated entirely on a rented basis

decreased. The proportion of census-farm operators under 35 years of age decreased from 17 p.c. in 1961 to 15 p.c. in 1966. Conversely, the proportion of operators from 45 to 54 years of age increased from 27 p.c. to 28 p.c. and the proportion of those 55 years of age or older increased from 32 p.c. to 33 p.c.

Farm Machinery.—Except for the number of automobiles, which showed a slight decrease, all machinery items listed in Table 52 increased between 1961 and 1966. Although the number of census-farms decreased by 10.5 p.c., the numbers of trucks, hay balers, and forage crop harvesters on census-farms increased by 14.2 p.c., 53.0 p.c. and 45.1 p.c., respectively.

Farm Electrification.—The proportion of census-farms reporting electric power increased in all provinces between 1961 and 1966, although, because of the smaller number of census-farms in 1966, there was a decrease in the total number reporting electric power. The largest percentage increase occurred in Newfoundland where the proportion moved from 65.8 p.c. to 84.4 p.c. In Prince Edward Island the proportion of census-farms reporting electric power increased from 78.1 p.c. to 89.6 p.c. and for all Canada it increased from 85.2 p.c. to 88.7 p.c. If the number of non-resident census-farms were subtracted from the total, the proportion reporting electric power in 1966 would be 96.6 p.c.; this is especially significant in Saskatchewan where almost 20 p.c. of all census-farms are non-resident farms.

Section 6.—International Crop Statistics

Tables 55 and 56 are based on estimates published in March and April 1967 by the Foreign Agricultural Service, United States Department of Agriculture, and give the acreages and production of wheat and the production of oats and barley for the harvests of 1965 and 1966 with average for the years 1960-64, in the leading countries of the world.

55.—Estimated Acreages and Production of Wheat Harvested in 1965 and 1966 in Specified Countries, with Average for 1960-64
